[#metamorphic rocks](#) [#earth geology](#) [#rock transformation](#) [#geological processes](#) [#types of metamorphic rocks](#)

Metamorphic rocks represent a crucial category of Earth rocks, formed when existing igneous or sedimentary rocks undergo profound transformations deep within the planet's crust due to intense heat, pressure, or chemical alteration. These fascinating geological processes result in unique rock structures and mineral compositions, providing invaluable insights into Earth's dynamic history and the powerful forces that shape our world.
