This pocket-sized book details 43 types of farm machinery most commonly seen on farms today including ploughs, cultivators, drills, spreaders and balers. A photograph of each machine is included. Chris Lockwood is a Suffolk based freelance agricultural journalist and producer of a long list of farming and farm machinery DVDs. This is his fourth book in the popular Know Your series.

Farm Equipment

Tractors are one of the most useful and utilized machines on a farm. These valuable vehicles are designed to pull heavy loads as well as other machines that help farmers in a variety of ways. Readers will love seeing some impressive tractors at work in this accessible volume. They'll learn the essential parts of tractors and a few of their important loads and attachments. Colorful photographs and key agricultural ideas help make this book a beneficial resource.

Tractor

From fire engines to submarines, tractors to diggers, this series takes an in-depth look at some amazing machines at work.

Tractors

Sowing crops on a farm would be backbreaking working without the machines called planters. These tractor-pulled tools can look quite different. Some are small, sowing just one row, and some can plant as many as 48 rows at a time! Readers will find out how these machines work and see their parts in motion in labeled photographs. They'll also discover how technology is changing this farm machine as well as some other seeding devices.

On the Farm

Look around a working farm and you will probably see some serious machinery at work. Farming today is much more reliant on machines, and each type plays an important role on the farm. With easy-to-follow text and simple definitions, each book in this set introduces readers to one specific set of farm equipment. They learn how it works and what function it serves, as well as the origins and evolution of the equipment. Fast facts and full-color photographs enhance the text, while a final activity guides readers in further exploration of each topic. Features include: Big machines are a high-interest topic that elementary school readers can't get enough of. Activities provide authentic learning opportunities for rural kids and urban kids alike. Offers technology study in spraying, baling, planting, tilling, harvesting, and tractor equipment.

Planters

An essential agricultural text originally published in 1922, *Farm Mechanics* is exactly that: a detailed but easy-to-understand manual outlining all the important aspects of working the land. The guide is broken up into sections that cover every aspect of farm work, from woodworking and cement-laying to farm machinery repair. Informative and easy to understand, with close to five hundred illustrations and photographs, *Farm Mechanics* is both a historical reference for those interested in the history of agriculture and a commonsense tool that outlines essential agricultural skills. For those who want to know more about the golden days of farming, there are plenty of details here to paint a vivid picture of early-twentieth-century farming in the United States, accompanied by detailed photos and illustrations of farm equipment and practices in action. But this isn't just a book of theoretical practices for curious historians either—while some of the skills explained here might admittedly seem inapplicable for modern use (due to advances in technology most farmers aren't taking the time to learn blacksmithing, for instance), other sections, like cement and concrete or rope and harness work for farm animals, contain tools and advice that are still indispensable to the modern-day farmer.

Those neat bundles of hay we see in a farm field are created by a fantastic farm machine called a hay baler. And just one bale of hay can weigh as much as 2,000 pounds (907 kg)! Along with learning how a hay baler does its job, readers will find out what kind of crop hay is and why it's needed. They'll also see cool, colorful photographs of these and other big machines at work, including labels to aid in comprehension. Farm work has never looked so fun!

Before those lush fields of hay, corn, or other delicious produce can be planted with even so much as a seed, the tilling equipment comes into play. With this colorful, easy-to-follow guide, young readers will learn that tilling is far more than turning some dirt over in a field. Energetic and educational text teaches about this useful piece of farm equipment, including what it does, how it works, the different types of tilling, and when a farmer should or should not till a field. A final activity allows readers to use their knowledge in a fun way.

Hay Balers

After the crops are grown, it's harvest time. On large farms, this is a huge job. Luckily, there are some huge machines to help out. Harvesters are devices that pick crops and sometimes even sort the parts of the plant we use from those we don't. Readers will enjoy learning about these ingenious farm machines almost as much as they'll love seeing them at work in the field in the bright photos of this fun volume.

Exploring Careers: Agriculture, forestry, and fishery occupations

As predicted by the Mayans calendar there was a period ending and a new one emerging. The first real evidence was when the magnetic Poles began to move on March 18th, 2018. Triggering shifts in the continental tectonic plates causing volcanoes, earthquakes, and accelerating climate change. The ice caps melted, causing major flooding to coastal populations. Drought and deserts appeared where there were none before. Pollution combined with high atmospheric volcanic ash changed our sky by blocking out some of the sunrays. The rays that got through were kept in our atmosphere slowly raising global temperatures, eventually melting all glaciers and the ice caps. The rains were an acidic cocktail; most of the crops and vegetation could not cope. Then the viruses came, affecting at first, the planets birds, then huffed animals, then the rest, only a few species survived. What followed was devastation in the form of two pandemics, SCARS4 and H9N8, wiping out more than 60% of the world's population in the first flu season. Then came the next round these had no names, there wasn't time, fewer than 100 Million people survived worldwide. Bulletin of the United States Bureau of Labor Statistics

In the mid-1800's, Count Von Reichenbach spent 30 years experimenting with the human energy field, which he called the odic field. He found that this field showed many properties which were similar to the electromagnetic field. This odic field could be focused like a light through a lens, while another part of this odic field would flow around the lens, like a candle flame flows around something placed in its path. Air currents would also move this part of the odic field. This suggests a composition similar to a gas. His experiments suggest the odic or auric field is energetic, like a light wave, and also particulate, like a fluid. Also, he showed the right side of the body as being a positive pole, and the left as negative. This agrees with the ancient Chinese principles of yin and yang. Though we may never be able to comprehend human life, we know certainly that it is a movement, of whatever nature it be. The existence of movement unavoidably implies a body which is being moved and a force which is moving it. Hence, wherever there is life, there is a mass moved by a force. All mass possesses inertia, all force tends to persist. Owing to this universal property and condition, a body, be it at rest or in motion, tends to remain in the same state, and a force, manifesting itself anywhere and through whatever cause, produces an equivalent opposing force" -Nikola Tesla on Human Energy- Century Illustrated Magazine, June 1900 Like Intelligent Design, the idea of the Invisible Hand stubbornly persists in the face of overwhelming evidence"- James Kenneth Galbraith

Justice, or the lack of it, has caused many people many problems, and how to correct injustice has always been a problem for the human race. There was a Bible writer, Jeremiah, who described it as the heart is treacherous and who can know it? Most of us have had the misfortune of being a victim of this, and because of ignorance and various other causes have often suffered physically and mentally, sometimes for a long time. This is the theme of this book, a long road and a long time . . . sometimes.

Military Spending and Industrial Decline

Diplomarbeit aus dem Jahr 2007 im Fachbereich Jura - Sonstiges, Note: 1,7, Universität Hamburg (Universität Hamburg), Veranstaltung: öffentliche Sozialrecht, 24 Quellen im Literaturverzeichnis, Sprache: Deutsch, Abstract: In allen Epochen in der Entwicklung der modernen menschlichen Gesellschaft gibt es den historischen Nachweis, dass ein bestimmter Personenkreis im Auftrag des Herrschers bzw. später des Staates Aufgaben der Verwaltung, Aufrechterhaltung der Ordnung (Polizei) und Rechtssprechung auch in Zeiten von Kriegsereignissen, Naturkatastrophen oder anderen wirtschaftlichen bzw. sozialen Erschütterungen des Staates durch ihre loyale Haltung zum Staat garantierten, dass die wichtigsten Funktionen eines Staates trotz der Geschehnisse weiter aufrechterhalten werden konnten. Der Soziologe Max Weber unterscheidet deshalb zwischen patrimonialen Beamten, die im wesentlichen dem jeweiligen Herrscher verpflichtet waren und den bürokratischen Beamten, die fest umrissenen Kompetenzen haben und an den Staat gebunden sind. Im griechischen Staatswesen wurde erstmals festgestellt, dass Gesetze von Bürgern geschaffen werden und bestimmten sozialen Zielen dienen - damit wurde erstmals die Bedeutung von Gesetzen als Regelmechanismus im Staat formuliert.

From Industry to Arms

The importance of technology in our day to day lives is something that few people would deny. At home and in the office, in business and in politics, the effects of technology are pervasive. In this important new study, Anthony DiFilippo examines one specific aspect of this issue: the forces of political economy that direct the course of industrial technology. The book thoroughly analyzes the topic both empirically and comparatively and assesses the impact the political economy of technology

has on the nation's standard of living, its quality of life, and its long-term prospects for economic and democratic advancement. In addition, DiFilippo concludes with a practical and rational alternative to confront many of the economic problems described. The book's primary thesis states that recent U.S. industrial policy, which has emphasized continuous advancement of military capabilities, has absorbed large amounts of capital and technical personnel. At the same time, foreign nations have improved their technological capacities through comprehensive, civilian-supported industrial policies. To improve U.S. competitiveness, manufacturing, productivity, and, ultimately, the standard of living, DiFilippo shows that technological resources must be shifted to the civilian sector. He examines a wide range of issues surrounding the topic, from the demise of the post-industrial economy and the conventional explanations for competitive decline to the resource drain of advanced warfare and the industrial policies of Japan, West Germany, and France. An extensive set of charts and tables support DiFilippo's argument and point out some of the serious economic problems the U.S. approach to high technology has caused. A bibliography of selected works is also provided. With its pertinence to current economic, political, and technological issues, *From Industry to Arms* will be a valuable resource for courses in government and business, political economy, policy analysis, and science and technology. Public and academic libraries will also find it to be an important and timely addition to their collections.

Sources of Industrial Leadership

This book describes and analyzes how seven major high-tech industries evolved in the United States, Japan, and Western Europe. The industries covered are machine tools, organic chemical products, pharmaceuticals, medical devices, computers, semiconductors, and software. In each of these industries, firms located in one or a very few countries became the clear technological and commercial leaders. In a number of cases, the locus of leadership changed, sometimes more than once, over the course of the histories studied. The focus of the book is on the key factors that supported the emergence of national leadership in each industry, and the reasons behind the shifts when they occurred. Special attention is given to the national policies that helped to create or sustain industrial leadership.

Britain and the Economic Problem of the Cold War

Many accounts of British development since 1945 have attempted to discover why Britain experienced slower rates of economic growth than other Western European countries. In many cases, the explanation for this phenomenon has been attributed to the high level of defence spending that successive British post-war governments adhered to. Yet is it fair to assume that Britain's relative economic decline could have been prevented if policy makers had not spent so much on defence? Examining aspects of the political economy and economic impact of British defence expenditure in the period of the first cold war (1945-1955), this book challenges these widespread assumptions, looking in detail at the link between defence spending and economic decline. In contrast to earlier studies, Till Geiger not only analyses the British effort within the framework of Anglo-American relations, but also places it within the wider context of European integration. By reconsidering the previously accepted explanation of the economic impact of the British defence effort during the immediate post-war period, this book convincingly suggests that British foreign policy-makers retained a large defence budget to offset a sense of increased national vulnerability, brought about by a reduction in Britain's economic strength due to her war effort. Furthermore, it is shown that although this level of military spending may have slightly hampered post-war recovery, it was not in itself responsible for the decline of the British economy.

Study on the Economic and Social Consequences of the Arms Race and Military Expenditures

This report is in response to mandates of the General Assembly on the economic and social consequences of the arms race. It discusses the dynamics and resources of the arms race, military outlays and socio-economic development and international consequences of the arms race. The analysis reveals a continuity of negative effects but a greater degree of change since its previous reports.

International Bibliography of Business History

The field of business history has changed and grown dramatically over the last few years. There is less interest in the traditional 'company-centred' approach and more concern about the wider business context. With the growth of multi-national corporations in the 1980s, international and inter-firm comparisons have gained in importance. In addition, there has been a move towards improving links with mainstream economic, financial and social history through techniques and outlook. The International Bibliography of Business History brings all of the strands together and provides the user with a comprehensive guide to the literature in the field. The Bibliography is a unique volume which covers the depth and breadth of research in business history. This exhaustive volume has been compiled by a team of subject specialists from around the world under the editorship of three prestigious business historians.

Rearming for the Cold War, 1945-1960

Book Description: The first publication in a multivolume series on the history of the acquisition of major weapon systems by the Department of Defense, author Elliott Converse presents a meticulously researched overview of changes in acquisition policies, organizations, and processes within the United States military establishment during the decade and a half following World War II. Many of the changes that shaped the nature and course of weapons research and development, production, and contracting through the end of the century were instituted between 1945 and 1960; many of the problems that have repeatedly challenged defense policymakers and acquisition professionals also first surfaced during these years. This study is the first to combine the histories of the Office of the Secretary of Defense (OSD) and the military services into one account. The volume is organized chronologically, with individual chapters addressing the roles of OSD, the Army, Navy and Air Force in two distinct periods.

Beyond Spinoff

In a rapidly changing world, there needs to be a critical reappraisal of traditional military/industry relationships. This book, packed with data, industry-specific case studies, and sophisticated analysis, is such an appraisal. It will be required reading for technology managers and policymakers in industry and government, as well as those concerned with technological and economic competitiveness.

Economic Conversion

This volume supplements the acclaimed three volume set published in 1986 and consists of an annotated listing of American Studies monographs published between 1984 and 1988. There are more than 6,000 descriptive entries in a wide range of categories: anthropology and folklore, art and architecture, history, literature, music, political science, popular culture, psychology, religion, science and technology, and sociology.

American Studies

This work addresses new directions in research on the economic theory of conflict, the cost of war, and the benefits of peace. A collection of 17 papers drawing on contributors from all continents, the volume is divided into four sections. The first discusses novel ways to think about the economics of conflict and peace from theory perspectives. These include discussions of conflict from the perspectives of standard neoclassical analysis and economic geography. An especially interesting paper in this section addresses conflict in the context of the emerging theory of international public finance. A second section deals with military expenditures, economic/human development and economic growth in the US and developing nations of Asia and Africa. The volume enters new territory in sections three and four. Section three contains a set of papers on the economic cost of war and war's aftermath, significantly expanding economists' rather modest efforts to date. Section four is concerned with how the concepts of economics might be operationalized and institutionalized to foster security.

The Economics of Conflict and Peace

German industry in particular is a central focus for studying technical and organizational changes in industry due to its pivotal position in international markets, its technological sophistication and its well-established training systems. Originally published in 1992, this study brings together contributions which contain both theoretical approaches and extensive empirical studies, on the manufacturing industry in Germany, including comparisons to other European countries. It looks at the developments

of new technology, identifying trends in rationalization and the influences they have on organizational behaviour. As it discusses the relationships between technology and the work-force it includes discussion on flexible specialization, labour processes, union relations, small and large firms and training processes.

Technology and Work in German Industry

What does the future hold for the UN? In this book, twenty-two scholars from all continents cover prevention of violence, creating economic and social structures that sustain human fulfilment, sharing and protecting the commons, and peace education. They offer sixty-six recommendations for new institutions and programs on issues that include controlling weapons, humanitarian intervention, human rights, economic policies, advancement of women, refugees, ecological security, communications, and peace education. Most of the recommendations do not require amendments to the UN Charter or to the treaties establishing the UN Specialized Agencies. Instead, their implementation would require creative efforts of Member States, secretariats, NGOs, and dedicated individuals that are pointed toward attainment of multilateral capacity for coping with an array of global problems that increasingly threaten the quality of human life.

The Future of the United Nations System

This book examines the concept of Transformational Growth from a number of different historical and geographical perspectives. Transformational Growth sees the economy as an evolving system in which the market selects and finances innovations, changing the character of costs and affecting the pattern of market adjustment. This creates the possibility that markets will work differently in particular historical periods. This book explores market adjustments in two distinct historical periods, 1870-1914 and 1945-the present. The book focuses on six countries: USA, United Kingdom, Canada, Germany, Japan and Argentina. In all cases the earlier period, dominated by craft-based technologies, proves to be the one in which markets adjust through a weakly stabilising price mechanism. By contrast, in the later period, in all cases, with the exception of Argentina, there is no evidence of such a price mechanism, but in its place can be seen a multiplier-accelerator process which, arguably, reflects a change of technology to mass-production.

Transformational Growth and the Business Cycle

This book provides a broad overview of Professor Raimo Väyrynen's academic work, his role in international research organizations, and his contributions to policy debates. It offers an interesting review of important political issues during the time span of half a century, from disarmament in Europe to the changing relationship between state sovereignty and transnational forces. Väyrynen has dealt with the changing agenda of peace and international relations, security and the arms race, and the world economy. This book provides comprehensive analyses of the regional and systemic structure of international relations, with the emphasis on conflicts and warfare between nations. It argues that while states, even smaller ones, still matter, transnational issues are increasingly important. Taking a historical perspective, the articles suggest that large-scale violence and arms races have been recurrent and cyclical phenomena in international relations. These events reflect the deep-seated inequalities in the political and economic systems which, moreover, vary considerably between regions. The publication is important reading for any researcher as well as students, policy-makers and the science-oriented public at large. • Traces the changing agenda of international relations from disarmament and the world economy to the changing relationship between state sovereignty and transnational forces. • Provides analyses of the regional and systemic structure in international relations, with the emphasis on conflicts and warfare. • Argues that large-scale violence and the arms race have been recurrent and cyclical phenomena in international relations. • Reviews important political issues from peace and conflict in Europe to the changing power relationship in the world.

Raimo Väyrynen: A Pioneer in International Relations, Scholarship and Policy-Making

Thought the last financial crisis was scary? Just wait...it's going to get worse America is on the brink of financial collapse. Decades of political overpromising and underfunding have created a wave of debt that could swamp our already feeble economy. And the politicians' favorite tricks—raising taxes, borrowing from foreign governments, and printing more money—will only make it worse. Only one thing might save us: Roll back the government. In *Rollback: Repealing Big Government Before the Coming Fiscal Collapse*, Thomas E. Woods, Jr. explains that we may still have a chance to avert total

economic disaster—but only by completely changing our understanding of government. With bracing candor, he dissects just how the political class has nearly destroyed America's economy. In *Rollback*, you'll learn: Why practically everything you've been taught about government and the economy is wrong—the product of liberal pro-government propaganda How the Federal Reserve helps create crises and slows recovery Why big business is no ally in rolling back government and actually wants and needs big government intervention in the marketplace How current policies, if unchecked, will lead to the collapse of the dollar How government policies have driven the skyrocketing costs of health care Why retirement will be a pipe dream for the next generation How the coming collapse can be turned to your advantage—and the advantage of all who believe in liberty and limited government Thanks to decades of politicians playing kick the can down the road, we and our children are facing economic Armageddon. But this crisis could help us see government for what it really is—an institution that has seized our wealth and taught our children to honor it as the source of all progress. The good news is it's not too late to roll back government—and the opportunity to do so is now.

The Impact of Defense Spending on Investment, Productivity and Economic Growth

By assessing the costs and benefits of military spending, the authors provide a "second opinion" on the subject of military economics. While advocates of increased military spending often stress the positive effects of the Pentagon on the economy, there has been little systematic summary of the "opportunity costs" that society pays for a large military establishment. This book fills that gap.

Rollback

This major reference work is a comprehensive critical guide to the large and growing literature on the economics of defence, disarmament and peace. It covers the cost of defence spending and its effects on growth, investment, unemployment, technical change and other aspects of a nation's economic performance. It includes material on the determinants of defence spending namely defence budgets, programme budgeting and procurement policy. It also deals with the economic impact of arms limitation, disarmament and the conversion from military production to products with peaceful uses.

Military Expansion, Economic Decline

This shortform book presents key peer-reviewed research selected by expert series editors and contextualised by new analysis from each author on how the specific field addressed has evolved. The book features contributions on the history of government-business relations, regional and local business relationships, the development and formation of Silicon Valley, and the rise and fall of the US machine tool industry after the Second World. Of interest to business and economic historians, this shortform book also provides analysis that will be valuable reading across the social sciences.

The Economics of Defence, Disarmament, and Peace

This paper on the numerically controlled (NC) machine tool industry is part of a broader study conducted by the RAND Graduate School's Civil and Military Technology Workshop led by Dick Neu. The class efforts were directed towards analyzing the relationship between research and development (R & D) investment in the military and civilian sectors of the U.S. economy. That is, we addressed the topic of how military R & D investments might have a synergistic or spillover effect upon the civilian economy, or relatedly, how military investments might be used to overcome existing market failures in dual military/civilian industries. Additionally, we looked for evidence to suggest that military investments have had a negative impact on civilian technological development, by crowding out civil investments and raising the market prices of inputs. Each student wrote a substantial case study of an industry to evaluate the governments's role in its success or failure. Besides NC machine tools, the industries included airframes, parallel processing, the early development of computers, and semiconductors. (kr).

The U.S. Machine Tool Industry and the Defense Industrial Base

This title was first published in 2000: Steven Nivin analyzes a process vital to economic development - technological change. He furthers understanding of the processes driving innovation, so that we may gain a deeper insight into the development of economies. Specifically, the study explores the concept of innovation potential and the factors that result in variations in innovation potential across metropolitan areas, using the US machine tool industry as a case study. To provide a comparison, the same models are also estimated for the semiconductor industry. The findings indicate that urbanisation

economies, localization economies, human capital, universities, and invention-derived knowledge are significant factors. The study assesses the contributions of three different skill levels of human capital; college-educated, graduate degree, and locally produced PhD's in mechanical and electrical engineering. Only the graduate and PhD degree measures are found to be significant, indicating the importance of having a highly skilled pool of labour within the region. The influences of the factors appear to be similar across industries, with some slight differences. The transfer of knowledge through patents is also studied. It is found that the transmission of this knowledge is slower between different industries, relative to the transmission within the same industry.

Growth and Decline of American Industry

The 1970s and 1980s witnessed growing concern in the United States regarding the relative decline of the American economy and, for defense planners, the military's growing dependence on foreign production of weapons' parts and subcomponents—the guts of many critical weapons systems. The period also witnessed growing interest in industrial policy as a tool for promoting U.S. international competitiveness, defense sectors proving to be particularly attractive candidates for government economic intervention. This study traces the evolution of defense dependence and the U.S. government's response to this dilemma by examining policy ideas and experiments in four defense industries—machine tools, semiconductor manufacturing, ball bearings, and high-definition television technologies—explaining successes and failures, and reviewing prospects for expansion.

Civil and Military R&D Spending

How can we explain the persistent worsening of the income distribution in the United States in the 1980s and 1990s? What are the prospects for the re-emergence of sustainable prosperity in the US economy over the next generation? Situating these questions within a wider context through historical analysis and comparisons with Germany and Japan, this book focuses on the microeconomics of corporate investment behaviour, and the macroeconomics of household saving behaviour. Specifically, the contributors analyze how the combined pressures of excessive corporate growth, international competition, and intergenerational dependence have influenced corporate investment over the past two decades. They also offer a perspective on how corporate investment in skill bases can support sustainable prosperity, with studies drawn from the machine tool, aircraft engine, and medical equipment industries.

Responding to Defense Dependence

On February 4, 1986, the lives of thousands of workers changed in ways they could only begin to imagine. On that day, United Technologies Corporation ordered the closure of the 76-year-old American Bosch manufacturing plant in Springfield, Massachusetts, capping a nearly 32-year history of job loss and work relocation from the sprawling factory. The author, a former Bosch worker and the business agent for the union representing nearly 1,200 Bosch employees when the plant closed, interjects his personal recollections into the story. For more than 150 years Springfield stood at the center of a prosperous 200-mile industrial corridor along the Connecticut River, between Bridgeport, Connecticut, and Springfield, Vermont, populated with hundreds of machine tool and metalworking plants and thousands of workers. This book is a historical account of the profound economic collapse

of the Connecticut River Valley region, with a particular focus on Bosch, its workers, and its union. The shutdown is placed in the context of the wider region's deindustrialization. The closure marked the watershed for large-firm metalworking and metalworking unions in the Connecticut River Valley. The book also describes how the United States, in a ten-year period from the mid-1970s to the mid-1980s, went from being the world's leading exporter of machine tools to its leading importer, and how that sharp decline affected the region's leading city, Springfield, Massachusetts, which by 2005 was in danger of bankruptcy.

Corporate Governance and Sustainable Prosperity

For five decades the American economy has devoted some of its best resources to waging the Cold War. By the 1990s, this investment had not only made the United States the world's high-tech cop but had also successfully launched many new industries--computing, chip-based electronics, and satellite communications. But this military-based industrial policy has come at a high social and economic price, as the authors demonstrate in the first comprehensive reassessment of the military-industrial complex in twenty years. Based on extensive new data (much hitherto unpublished) and on interviews with defense industry executives, Pentagon officials, and community and union leaders, this book shows in disturbing detail how Cold War technologies have distorted and drained the economy. Military-led industrial policy has misfocused our research efforts, displaced more jobs than were created, and weakened our ability to compete effectively in world markets. The authors argue that a reversal in the long downward slide of the American economy will require a concerted effort at economic conversion. To counter the long-time military domination of science and technology development, they outline a national "needs-driven" science and technology policy to restore standards of living and industrial vitality. To overcome the "wall of separation" between military-industrial culture and the rest of American life, they propose an integrated economic development strategy designed to break addiction to Pentagon patronage. Here is a blunt and meticulously researched critique of the bitter economic fruits of the Cold War--and a plan for a cure.
