Bugging a Bug

"This is a lovely little book that could and should have a big impact...Let's all get rebugging right away!"—Hugh Fearnley-Whittingstall Meet the intelligent insects, marvelous minibeasts, and inspirational invertebrates that help shape our planet—and discover how you can help them help us by rebugging your attitude today! Remember when there were bugs on your windshield? Ever wonder where they went? We need to act now if we are to help the insects survive. Robin Wall Kimmerer, David Attenborough, and Elizabeth Kolbert are but a few voices championing the rewilding of our world. *Rebugging the Planet* explains how we are headed toward "insectageddon" with a rate of insect extinction eight times faster than that of mammals or birds, and gives us crucial information to help all those essential creepy-crawlies flourish once more. Author Vicki Hird passionately demonstrates how insects and invertebrates are the cornerstone of our global ecosystem. They pollinate plants, feed birds, support and defend our food crops, and clean our water systems. They are also beautiful, inventive, and economically invaluable—bees, for example, contribute an estimated \$235 to \$577 billion to the US economy annually, according to *Forbes*. *Rebugging the Planet* shows us small changes we can make to have a big impact on our littlest allies: Learn how to rewild parks, schools, sidewalks, roadsides, and other green spaces. Leave your garden to grow a little wild and plant weedkiller-free, wildlife-friendly plants. Take your kids on a minibeast treasure hunt and learn how to build bug palaces. Make bug-friendly choices with your food and support good farming practices. Begin to understand how

reducing inequality and poverty will help nature and wildlife too—it's all connected. So do your part and start rebugging today! The bees, ants, earthworms, butterflies, beetles, grasshoppers, ladybugs, snails, and slugs will thank you—and our planet will thank you too.

Rebugging the Planet

Ever imagined what bugs are thinking? How about how they feel? What if bugs took vacations and had friends like you? Do bugs go to school and follow rules? Let's explore these questions while Bugging a Bug.

Bugging a Bug

Stanley the Stinkbug is upset: he isn't invited to the Ugly Bug Ball because of his stench! Garden meanie Prissy Pray refuses to let Stanley attend the party, and that makes Stanley feel really bad about himself. Will his friends help him see how important every part of him is? Will he let Prissy Pray bully him into not going to the ball? Or will he gather his courage and overcome his fears?

The Ugly Bug Ball

There's no reason to be scared of bugs! They can be cute if you look some of them too closely. But a child will learn to appreciate them even better if he/she learns about all the good things that they can do for the environment. So go ahead and calm your child's fear of bugs. Grab a copy now!

Hello, World! Backyard Bugs

Bugs like to have sleepovers too in this fun bedtime story! Levi's sleepover is not quiet. His friends are so loud with their snoring, buzzing and chomping that he can't sleep. Just when his eyes begin to close, each bug wakes him one by one wanting to go home. When Levi takes them home, he learns that each bug has a different way of sleeping. Although Levi wished his friends stayed all night long, it was nice the noise was gone. Your little reader will love to see where bugs go to sleep in this fun rhyming picture book. This read-a-loud bedtime story includes adorable sleeping bugs that are a delightful and calming transition before saying goodnight. Get a glimpse of caterpillar, butterfly and praying mantis having sweet dreams. For children ages 2-6 years. e

Where Do the Bugs Go to Sleep?

Is something bugging you? Bestselling award-winner David Shannon shows the funny side of waging war against -- oh no! -- head lice. This book is guaranteed to make you laugh -- and itch! From the opening picture of a happy, oversized louse appearing with his suitcases, you know these bugs are determined to stay, and Mom is about to go nuts! Nobody talks about them, but they are everywhere. (Some estimate 20 million children a year host them.) Oh the shame and humiliation of having bugs in your hair! But if you go to school, or have play dates, chances are good you might meet them someday. Maybe you already have! Lucky for you, the unwelcome bugs in this story are so funny you will be laughing aloud -- even when Mom attacks them with battle-tested anti-lice weapons. Shannon peppers his hilarious scenes with fun, "nitpicking" facts about these "lousy" critters and pokes fun at common denial: "It's probably ash from that volcano in Pogo Pogo." Soon the party's over -- Bye bye, Little Nasties! Once again Shannon has created a fresh, highly entertaining read-aloud classic that begs to be read again and again.

Introduction Ladybugs seem to come and go without being noticed most of the time. They are cute and colorful insects. Insects are a living species that have a 3-part body, several eyes, 3 pairs of jointed legs and 1 pair of antennae. Antennae are long, thin sensors. Scientists that study insects are called entomologists. Entomology is a Greek word meaning segmented or cut into pieces. The study of insects is part of the field of biology which studies all living things. An insect's body has pieces that are joined together. Some animals have a long spine or backbone which means that they are made all in one piece. Insects are a diverse and fascinating form of life which accounts for more than two-thirds of all known organisms. There are approximately 1.3 million named species of insects around the globe. Insect species are still being identified and classified, with a description and a name. Ladybugs have a smooth and delicate shell on the top of their body. Underneath, 6, tiny rough legs work together so that they can walk around. Watch them move, they are slow and steady. They can tip over by accident and they may get stuck. Their stubby legs and their round body will struggle to right themselves. Just give them a little push and they will have their shell back on top. When ladybugs cluster on a sunny, kitchen window they can be a pest. But they are helpful creatures in the garden, field and forest. They naturally feed on the harmful insects that destroy plants, crops and trees. Ladybugs or lady beetles fly and cluster together.

Enter the kingdom of bugs and their close relatives for a magical journey through the forest floor, down into the deepest caves, and even across the open ocean. Insects, arachnids, worms, and molluscs are crawling across the pages of this colourful bug book, which combines gorgeous illustrations and photos to help young animal enthusiasts spot and learn all the main bug groups. From dancing bees to cartwheeling spiders, from butterfly athletes to the beetles that eat poo, they'll learn all about the incredible secret world of creepy-crawlies. And they'll find out how bugs help to look after our planet too. The Book of Brilliant Bugs, written by insect expert Jess French and illustrated by Claire McElfrick, takes children on a fascinating journey of exploration, showing them just how amazing creepy-crawlies are, what they do for our planet, and how we can help them. It includes bug relatives such as slimy slugs, web-spinning spiders and scuttling centipedes, plus amazing facts on how bugs pass on messages, compete for food, seek true love, and fill the air with buzzing wings.

The Book of Brilliant Bugs

DEAR CHILDREN, -The very best way to know the insects is to go and watch them. Watch them whenever you can, and each time you will find out something new. Books will help you, but you must watch, too. Look more than you read. If you need to catch them, put them under a tumbler, and feed them and give them a drop of water every day to drink. Slip a card under the rim of the tumbler on one side so as to let in the air. If you do not know what to feed them, or if they will not eat, let them go after a day or two. If you wish to kill an injurious insect, do it quickly and completely. Remember the insects are alive, and we should not make them suffer unnecessarily. Of course you must try to make your captives feel at home. If they live in the sand, put sand in the tumbler and tie a piece of netting over the top so they cannot escape. If they live in the water, put them in a tumbler of water. And when you have secured your captives, watch them as much as you can. If you do not know how to pronounce the words in this book, study the glossary at the back and it will help you. I hope you will have a very happy time getting acquainted with your little insect neighbors. MARGARET WARNER MORLEY
