Threat actors, be they cyber criminals, terrorists, hacktivists or disgruntled employees, are employing sophisticated attack techniques and anti-forensics tools to cover their attacks and breach attempts. As emerging and hybrid technologies continue to influence daily business decisions, the proactive use of cyber forensics to better assess the risks that the exploitation of these technologies pose to enterprise-wide operations is rapidly becoming a strategic business objective. This book moves beyond the typical, technical approach to discussing cyber forensics processes and procedures. Instead, the authors examine how cyber forensics can be applied to identifying, collecting, and examining evidential data from emerging and hybrid technologies, while taking steps to proactively manage the influence and impact, as well as the policy and governance aspects of these technologies and their effect on business operations. A world-class team of cyber forensics researchers, investigators, practitioners and law enforcement professionals have come together to provide the reader with insights and recommendations into the proactive application of cyber forensic methodologies and procedures to both protect data and to identify digital evidence related to the misuse of these data. This book is an essential guide for both the technical and non-technical executive, manager, attorney, auditor, and general practitioner who is seeking an authoritative source on how cyber forensics may be applied to both evidential data collection and to proactively managing today's and tomorrow's emerging and hybrid technologies. The book will also serve as a primary or supplemental text in both under- and post-graduate academic programs addressing information, operational and emerging technologies, cyber forensics, networks, cloud computing and cybersecurity.

Award-winning CNN journalist Kitty Pilgrim turns her talents to print in *The Explorer's Code*, an exciting international thriller that revolves around the quest for a land deed valuable enough to kill for. This enhanced e-book includes five videos that explain more about oceanography, archaeology, the 1918 flu pandemic, Victorian painting, and the international seed vault. A short interview with Kitty will introduce these videos and provide an introduction to Kitty, how she came to write this book, and set the stage for the videos. These topics are discussed in this entertaining, informative novel filled with action and adventure as well as glamour, romance and international intrigue. When the renowned young oceanographer Cordelia Stapleton receives an invitation to accept an award on behalf of her great-great-grandfather, a famous Victorian polar explorer, she has no idea her life is about to change dramatically. John Sinclair—a dashing, wealthy archaeologist and philanthropist—presents Cordelia with the award at the glamorous Oceanographic Institute Ball in Monaco. He also gives her a journal that her greatgreat- grandfather wrote in 1908. An orphan with very few family belongings, Cordelia is amazingly touched to have this precious heirloom. Once the journal is in her possession, Cordelia learns that she is heir to the land on which the Global Seed Vault in Norway sits. The valuable deed for this land, or at least a clue to its whereabouts, may be hidden in the journal. When the journal disappears from Cordelia's stateroom on the *Queen Victoria* and Cordelia receives threatening e-mails, it becomes clear that she is in danger. John Sinclair comes to Cordelia's aid, helping her search for the missing journal and land deed, and capturing her heart. As they race to find the deed, Cordelia and Sinclair encounter a team of British virologists trying to decode the genome of the 1918 influenza pandemic, but unearthing infected tissue samples may prove more lethal than curative. Cordelia and Sinclair sail through the Mediterranean from Monaco to an archaeological site in Ephesus, Turkey. They travel to a beautiful old Parisian home and a lavish estate in the British countryside. Their search culminates in the high Arctic archipelago of Svalbard, not far from the North Pole. Behind them every step of the way are a consortium of Russian underworld criminals, religious fanatics from Texas, a sinister botanist, and a sexy American spy, all hunting for the deed, all pursuing Cordelia. *The Explorer's Code* is a satisfying blend of historical detail, fast-paced action, scientific discovery, and the thrill of exploration that informs as well as entertains. The breathtaking ending in the high Arctic is as chilling as a polar breeze.

This aviation handbook is designed to be used as a quick reference to the classic military heritage aircraft that have been restored and preserved in the state of Arizona. The aircraft include those flown by members of the United States Air Force, the United States Navy, the United States Army, the United States Marine Corps, the United States Coast Guard, the Air and Army National Guard, and by various NATO and allied nations as well as a number previously operated by opposition forces in peace and war. The interested reader will find useful information and a few technical details on most of the military aircraft that have been in service with active flying squadrons both at home and overseas. 100 selected photographs have been included to illustrate a few of the major examples in addition to the serial numbers assigned to American military aircraft. For those who like to actually see the aircraft concerned, aviation museum locations, addresses and contact phone numbers have been included, along with a list of aircraft held in each museum's current inventory or on display as gate guardians throughout the State of Arizona. The aircraft presented in this edition are listed alphabetically by manufacturer, number and type. Although many of Arizona's heritage warplanes have completely disappeared, a few have been carefully collected, restored and preserved, and some have even been restored to flying condition. This guide-book should help you to find and view Arizona's Warplane survivors.

British Imperial Fiction, 1870-1940 traces the gradual process by which the colonial bureaucratic subject was constructed in nineteenth- and early twentieth-century Britain. Daniel Bivona's study offers insightful readings of a number of influential writers who were involved in promoting the ideology of bureaucratic self-sacrifice, the most important of whom are Stanley, Kipling and T. E. Lawrence. He examines how this governing ideology is treated in the novels of Joseph Conrad, Joyce Cary and George Orwell. By placing the complexities of individual texts in a much larger historical context, this study makes the original claim that the colonial bureaucrat played an ambiguous but nonetheless central role in both pro-imperial and anti-imperial discourse, his own power relationship with bureaucratic superiors shaping the terms in which the proper relationship between colonizer and colonized was debated.

Marshall McLuhan made many predictions in his seminal 1964 publication, *Understanding Media: Extensions of Man*. Among them were his predictions that the Internet would become a «Global Village», making us more interconnected than television; the closing of the gap between consumers and producers; the elimination of space and time as barriers to communication; and the melting of national borders. He is also famously remembered for coining the expression «the medium is the message». These predictions form the genesis of this new volume by Robert Logan, a friend and colleague who worked with McLuhan. In *Understanding New Media* Logan expertly updates *Understanding Media* to analyze the «new media» McLuhan foreshadowed and yet was never able to analyze or experience. The book is designed to reach a new generation of readers as well as appealing to scholars and students who are familiar with *Understanding Media*.
