Housing Associations and Sustainable Management

This book provides a deep insight into urban regeneration schemes and explores the parameters of what is deemed a sustainable development, before appraising existing schemes' evaluation models for the sustainable return on investment. The authors present a new practical evaluation tool that suggests quantifiable benefits for all urban regeneration stakeholders. This new method enables the gauging of the full sustainable impact, from a given outlay of money invested in a housing-led urban regeneration scheme, through an evidence-based proof and can be used to: Better fulfil sustainability criteria in terms of all three aspects of the triple bottom line and contribute in a more sustainable way to address the United Nation's Sustainable Development Goal 11 Reduce financial waste and plug the gap created by the recent economic shortfall which is impacting on housing associations, tenants and communities alike Evaluate historical housing-led urban regeneration schemes and model future schemes. The method can be used as a strategic decision making or management tool, with schemes being able to be planned in, prioritised or carried out in a targeted and strategic manner; and it can be used for modelling purposes, for publicity purposes and alongside existing tools. This book provides a unique method of fully and sustainably evaluating housing-led urban regeneration schemes, useful for planners, strategic management, local authorities, housing associations, the construction industry and built environment students alike.

Sustainable Urban Regeneration

The embedding of energy efficiency in the management of individual housing organisations is crucial for the realization of current ambitious energy efficiency policies. This issue is examined for the first time in this book through an analysis of selected case studies in new 'green' buildings, as well as in the retrofitting of existing housing, maintenance and budgeting. The links between policy ambitions, practice and housing management institutions are given particular attention. Thus the book is primarily concerned with how ambitions about energy efficiency are carried forward in investment decisions at the housing estate level. Technical and financial issues relevant for this are also addressed. The editors combine a wealth of experience in comparative research on housing policy and housing management with a strong academic background in housing studies and economics. The book aims to be internationally comparative including a range of countries. A chapter will be devoted to each of the following countries:- Sweden; Denmark; Germany; the Netherlands; England; France; Switzerland; Austria; Czech Republic; Slovenia; Canada. The book will appeal to a large audience of students and academics who are concerned with housing issues, urban policy and politics as well as to those engaged in research in energy efficiency policies in the built environment.

Energy Efficiency in Housing Management

Since the start of the twenty-first century, urban communities have faced increasing challenges in housing affordability, with environmental issues causing additional concern. It is clear that changes to urban housing are needed to enhance the resilience of cities and improve the economic, social and physical well-being of residents. This book provides a comparative cross-national perspective on urban housing and sustainability in Europe, exploring the key barriers and drivers associated with sustainable urban development and community regeneration. Country-specific chapters allow for easy comparison, with each summarizing how sustainable housing operates in the country in question, before going on to discuss the key barriers and drivers at play. This book brings a sustainability perspective to the comparative housing literature which frequently fails to integrate the social, economic and environmental pillars of sustainability. The book outlines many of the changes that professionals and residents will need to make to their practices and cultures in order to enhance housing resilience. Students, researchers and professionals with an interest in sustainable housing creation and regeneration will find this book an invaluable reference.

Sustainable Communities and Urban Housing

The provision and management of social housing for those who are unable to access the housing market is essential to the maintenance of the fabric of society. The social housing industry is vast and still growing. There are very few countries in the world where some form of subsidised housing

does not exist, and the total number of social homes is likely to grow worldwide, as are the challenges of the sector. Paul Reeves takes a people-centred approach to the subject, describing the themes that have run through provision of social housing from the first philanthropic industrialists in the 19th Century though to the increasingly complex mixture of ownerships and tenures in the present day. The management of housing forms a key part of the book, with an emphasis on the practical aspects of tenant participation and multi-agency working. The book is ideal for students of housing and social policy, and for housing professionals aiming to obtain qualifications and wanting a broad understanding of the social housing sector.

Introduction to Social Housing

Written by experts, Sustainable Housing brings new perspectives on residential sustainability, using case studies of latest practice. This book is based upon the 'Housing and Sustainability' conference at the RIBA in 1998, which intended to guide action into the next century, setting down key principles, providing important new technical information and setting UK practices in a European context.

Sustainable Housing

"This book provides a deep insight into urban regeneration schemes and explores the parameters of what is deemed a sustainable development, before appraising existing schemes' evaluation models for the sustainable return on investment"--

Sustainable Urban Regeneration

Local regeneration, and action on local issues, is fundamental to the sustainability of local communities. This is especially the case in the UK, with the Government focus on such approaches as Local Enterprise Partnerships and neighbourhood development plans, and further devolution proposals in the pipeline. The Local Regeneration Handbook meets the needs of today's practising "regeneration workers"

Sustainable Development of the Housing Finance System

This edited collection broadens the definition of sustainable real estate based on industry trends, research, and the Paris Climate Agreements. Discussions encompass existing and new buildings throughout their life cycle, the financing of their development and operations, and their impact on the surrounding environments and communities. This broader perspective provides a better understanding of the interconnected nature of the environmental, societal, communal, political, and financial issues affecting sustainable real estate, revealing the wide-ranging impact of practitioners' decisions on the sustainable real estate system. Bringing together carefully selected articles from leading global academic and practitioner experts from urban planning, design, construction, and finance, this collection brings to light new opportunities and innovative transdisciplinary solutions to as-yet unresolved problems.

Local Regeneration Handbook

Ireland is now an urban society, and both parts of the island have experienced rapid urban-generated growth and new patterns of development in recent years. This inter-disciplinary book adopts an all-Ireland perspective to investigate the tension that exists between sustainable urban development values and rhetoric - such as increased densities, brown field development, the compact city and social inclusion - and the emerging geography of urban Ireland, influenced by consumer and lifestyle choices. The introduction provides an overview of the dynamics of urban change, particularly during the 1990s, and the experience of rapid economic growth. The following chapters are divided into two parts, considering sustainable urban environments, and sustainable communities. This book will appeal to students, academics, policy and decision-makers, given that it adopts both a qualitative and quantitative approach, and introduces a range of new empirical studies covering both physical and social sustainable development.

Sustainable Real Estate

Social Value in Practice offers the reader a simple, accessible guide for considering, creating, and delivering social value in projects and within their organisation. The book connects social value to the global Sustainable Development Goals (SDGs) and presents an insight into the many and different

practical ways in which individuals and organisations can make a positive impact towards resolving the 'people, planet and prosperity' agenda: 'Good work' – good practice in managing people, including working conditions, and equality, diversity, and inclusion Education, skills, and employment, including apprenticeships and enhancing the industry image Social procurement and circular supply chains Strategic partnerships and social enterprises Community development, regeneration, and placemaking Construction consultancy Architecture, design, and construction Assessing and measuring social value. Reflective practitioners can pick it up, turn to a chapter, and learn something they can use right away. Through numerous practical examples and think pieces, this book can help readers learn how to create social value, how to improve and build upon current practice, and how to co-create social value in partnership with clients and the supply chain. The authors aim to empower and inspire stakeholders to engage with new ideas and create more value for those using the built environment. This book is a must read for all those involved in procuring, tendering, planning, designing, developing, funding, building, working in, and managing the built environment.

Renewing Urban Communities

The world's population is rapidly urbanizing but the affluence and development often associated with cities are far from equitably or sustainably distributed. Where it was once taken for granted that responsibility for urban development lay with the state, increasingly the emphasis has shifted to market-driven and public-private sector initiatives, which can marginalize the intended beneficiaries - the urban poor - from decision making and implementation. This text outlines the essential conditions for effective urban planning and management by placing bottom-up community initiatives at the heart of the push for equitable and sustainable development in cities. Crucially, the state must engage with both the market and civil society in pursuit of sustainable cities. Presenting a wide-ranging selection of case studies in rapidly urbanizing and transitional countries, from the poorest parts of Africa and Asia to the relatively developed United Kingdom, the authors describe and analyze innovations in how globally disadvantaged urban communities can be engaged in improving their living environments.

Social Value in Practice

This document (which is a corrected edition of the publication first issued in January 2005) sets out the Government's five year plan to create sustainable mixed communities by addressing the varied housing challenges faced in different parts of the country and improving the supply and quality of housing for everyone, including first time buyers, social tenants, key workers and private sector tenants. Proposals for reforms include: investment in housebuilding and infrastructure to tackle housing shortages in the South East, using the private finance initiative; a new Code for Sustainable Buildings, new powers to limit low density development and to protect the Green Belt; measures to help 80,000 first time buyers and an extension of the Key Worker Living scheme; a new Choice to Own scheme for council and housing association tenants; a new moveUK system to provide information about availability of jobs and homes to offer people the opportunity to move to new areas; improved quality and availability of private rented accommodation; an enhanced strategic role for local authorities in planning housing and growth; investment in housing related services to help older and disabled people live independently; and plans to address homelessness, including halving the number of households living in temporary accommodation by 2010.

Urban Development and Civil Society

Presents a new and comprehensive approach to the study of the regulations pertaining to housing: the institutional regimes framework

Sustainable Communities

Placing a particular focus on the provision of new housing in suburban and rural areas of Southern England, this book explores how the state seeks to adjudicate conflicts around development and conservation.

Sustainable Collective Housing

The UNECE Real Estate Market Advisory Group (REM) is a group of real estate experts who advise the Committee on Urban Development, Housing and Land Management on sustainable real estate markets, working to identify specific measures to strengthen a country's real estate market in a manner

that would contribute to economic growth and sustainable development. In 2010, the REM Advisory Group published the “Policy Framework for Sustainable Real Estate Markets”, a tool that would help guide the member States to create sustainable real estate markets. However, the emergence of key international agreements, such as the 2030 Agenda for Sustainable Development, the Geneva UN Charter on Sustainable Housing, the New Urban Agenda, the Paris Agreement, and the Basel III Agreement, have led to the establishment of new global and regional policy frameworks for future activities on sustainable urban development at all levels. In response to the request of the Committee to update the Policy Framework to reflect the emergence of such key agreements, the REM Advisory Group produced the current publication, which now also includes updates on the issues such as urbanization, migration and mobility flows, technology and innovation, the growth of emerging markets and asset competition, the change in housing demand oriented towards green buildings and new designs, energy consumption and climate change, and other relevant phenomena. Moreover, this version of the Policy Framework for Sustainable Real Estate Markets maintains that, contrary to the widespread belief that finance and real estate sectors have negative impact on sustainability, they can actually contribute to the achievement of Sustainable Development Goals with the implementation of effective and compatible principles. In particular, this publication shows that these principles can be incorporated by national, local and municipal governments and applied to various forms of real estate.

Rationalities of Planning

This valuable resource for developers and designers will help to develop design solutions sympathetic to the environment and improve the sustainability of residential landscapes. The landscapes around housing have a crucial role in creating a more sustainable future with carbon-neutral homes. This book shows how to improve the sustainable profile of new residential developments through landscape planning, design and management – by conserving resources and minimising pollution, and by enhancing ecological diversity. This may be achieved without significant additional capital outlay. The residential landscape sustainability checklist gives housing developers, landscape architects, architects and planners a tool with which to assess the environmental implication of their schemes throughout the design process – from site planning to detailed design. The checklist focuses on residential housing developments but many features of the tool - including improving energy efficiency, materials selection, planting design and management - can also be applied to a wide range of different types of development, from school grounds to retail parks.

Policy Framework for Sustainable Real Estate Markets

Urban Policy and Practice is a practical and critical guide to urban policy in contemporary Britain. The book covers a range of topics including: * Quality and consumerism in the public sector * Community development * Public Health * Environmental issues * Local intervention in the creation of skills and jobs Case studies are drawn from housing, planning, the social services, economic development, and local government finance. Throughout, the concern is for a clear analysis of corporate strategies, democratic control and sustainable development.

Residential Landscape Sustainability

Future Challenges in Sustainable Development within the Built Environment stimulates and reinterprets the demands of Responsible and Sustainable Development in the Built Environment for future action and development. It examines the methods of evaluation, the use of technology, the creation of new models and the role of human factors for examining and developing the subject over the next twenty years.

Urban Policy in Practice

This ground breaking volume raises radical critiques and proposes innovative solutions for social sustainability in the built environment. Urban Social Sustainability provides an in-depth insight into the discourse and argues that every urban intervention has a social sustainability dimension that needs to be taken into consideration, and incorporated into a comprehensive and cohesive ‘urban agenda’ that is built on three principles of recognition, integration, and monitoring. This should be achieved through a dialogical and reflexive process of decision-making. To achieve sustainable communities, social sustainability should form the basis of a constructive dialogue and be interlinked with other areas of sustainable development. This book underlines the urgency of approaching social sustainability as an urban agenda and goes on to make suggestions about its formulation. Urban

Social Sustainability consists of original contributions from academics and experts within the field and explores the significance of social sustainability from different perspectives. Areas covered include urban policy, transportation and mobility, urban space and architectural form, housing, urban heritage, neighbourhood development, and urban governance. Drawing on case studies from a number of countries and world regions the book presents a multifaceted and interdisciplinary understanding from social sustainability in urban settings, and provides practitioners and policy makers with innovative recommendations to achieve more socially sustainable urban environment.

Future Challenges in Evaluating and Managing Sustainable Development in the Built Environment

Sustainable Real Estate in the Developing World offers a perfect and ideal synthesis of works that examine sustainability within various facets of real estate and urban development in the developing world. A must-read for academics, researchers, policy-makers and students in all the built environment disciplines.

Urban Social Sustainability

A review of existing knowledge, experience and research findings to assess why policy implementation failure exists between national strategies and local initiatives.

Policies and Regulations for Sustainable Building

Brings together information on housing production, housing provision and the housing environment, highlighting the theoretical and policy contexts in which housing development takes place as an integrated process.

Sustainable Real Estate in the Developing World

The UNECE Real Estate Market Advisory Group (REM) is a group of real estate experts who advise the Committee on Urban Development, Housing and Land Management on sustainable real estate markets, working to identify specific measures to strengthen a country's real estate market in a manner that would contribute to economic growth and sustainable development. In 2010, the REM Advisory Group published the "Policy Framework for Sustainable Real Estate Markets\

Seeing the Bigger Picture

"After twenty years of sustainable building policies, the issue of environmental impact of buildings and urban environments remains. Policy makers still have difficulties addressing the ambiguous, contested and dynamic goals encapsulated in the term 'sustainable development'. How to decide between using zinc or PVC gutters, when knowledge and valuation of environmental risks of both keep changing? How can we accommodate urban growth, now that compact cities turn out to be urban heat islands?" "Greening governance identifies how policy makers can deal with these contested questions. The book draws on policy network theories that consider stakeholder interaction, negotiation and learning as conditions for policy success. By understanding these conditions from an evolutionary viewpoint it provides a new perspective for governance. The concepts of generative variety, selective retention and regeneration will help policy makers to prioritize and select contested alternatives while also focusing on more long term and ambitious policy goals. The book is of interest to policy makers and scientists concerned with both the practical and theoretical issues of sustainable built environments." --Book Jacket.

Housing Development

"Urban renewal through the large-scale restructuring of post-war neighbourhoods is a major challenge throughout Europe in the decades ahead. Current urban restructuring programmes in the Netherlands focus on the demolition and replacement of the existing housing stock. The motivation behind this strategy is creating a better social mix between poor and better-off households, to improve the general quality of the housing stock and to create a financially viable restructuring programme. The general aim is to improve various aspects of sustainability in urban neighbourhoods. Are demolition and replacement strategies the most effective and efficient way to achieve this objective? In this book, we examine the effects of demolition and replacement strategies on sustainability from different perspectives. An economic perspective: the market position and the value of the neighbourhoods, a

social perspective: the levels of social capital and residential stability, and an environmental perspective: the energy efficiency and the use of materials in restructuring strategies."

Policy Framework for Sustainable Real Estate Markets

With the built environment contributing almost half of global greenhouse emissions, there is a pressing need for the property and real estate discipline to thoroughly investigate sustainability concerns. The Routledge Handbook of Sustainable Real Estate brings together the latest research of leading academics globally, demonstrating the nature and extent of the impact as well as suggesting means of mitigating humankind's impact and building resilience. Four sections examine the different aspects of sustainable real estate: governance and policy valuation, investment and finance management redevelopment and adaptation. Covering all land uses from residential to commercial, retail and industrial, the Routledge Handbook of Sustainable Real Estate is an exciting mixture of received wisdom and emerging ideas and approaches from both the developed and developing world. Academics, upper-level students and researchers will find this book an essential guide to the very best of sustainable real estate research.

Greening Governance

This book is an ideal complement to studies showing the potentially devastating ecological effects of climate change, studies trying to calculate the costs of climate change, and studies trying to identify the most pressing needs in preparing for the new climate.

Sustainable Neighbourhood Transformation

How is London responding to social and economic crises, and to the challenges of sustaining its population, economy and global status? Sustainable development discourse has come to permeate different policy fields, including transport, housing, property development and education. In this exciting book, authors highlight the uneven impacts and effects of these policies in London, including the creation of new social and economic inequalities. The contributors seek to move sustainable city debates and policies in London towards a progressive, socially just future that advances the public good. The book is essential reading for urban practitioners and policy makers, and students in social, urban and environmental geography, sociology and urban studies.

Routledge Handbook of Sustainable Real Estate

In *Creating Community-Led and Self-Build Homes*, Martin Field explores the ways in which people and communities across the UK have been striving to create the homes and neighbourhood communities they want. Giving context to contemporary practices in the UK, the book examines 'self-build housing' and 'community-led housing', discussing the commonalities and distinctions between these in practice, and what could be learned from other initiatives across Europe. Individual methods and models of local practice are explored - including cohousing, cooperatives, community land trusts, empty homes and other intentional communities - and an examination is made of what has constrained such initiatives to date and how future policies and practice might be shaped.

Images of the Future City

In order to tackle the problem of the shortage of affordable housing, the Office of the Deputy Prime Minister (ODPM) has been set a Public Service Agreement (PSA) target to achieve a better balance between housing availability and demand in all English regions whilst ensuring sustainable development which recognises environmental concerns. This joint study by the Audit Commission and National Audit Office focuses on one strand of the PSA target, relating to improving the availability of affordable housing in high demand areas. The report also identifies ten areas where efficiencies are likely to be achieved in the social housing funding system, and it makes a number of recommendations for national, regional and local bodies to improve both efficiency and effectiveness of the delivery chain, highlighting the need to increase the speed of delivery and to reduce the unit cost of housing.

Sustainable London?

This new book explores how the professions responsible for enhancing the built environment's sustainability seek to deliver this new agenda, offering multi-perspective case studies and discussion to argue for a rethinking of the role of urban development professional. Showing how sustainability is

rapidly becoming the norm for practitioners, the authors consider new types of professional knowledge, relationships between planning systems and property development, links between public and private sector organisations, ideas about long term responsibilities and new working practices for engaging with the public.

Creating Community-Led and Self-Build Homes

This work aims to provide a possible specification of the problems involved in greening the built environment and an articulation of the solutions. It begins with a discussion of sustainability as a concept and its applicability to contemporary towns and cities. The following chapters take up particular aspects of the built environment and sustainability in greater depth and include the construction industry, transport, health, planning, community and equity issues, employment and the economy. The links between environmental damage, poverty and the economy are all themes in this book which also focuses on interconnections and on solutions to these three problems. The final chapter explains how the achievement of sustainable development is, in the authors' opinion, dependent on detailed solutions to everyday problems of modern society.

Building More Affordable Homes

Sustainable development is about meeting today's needs without compromising the ability of future generations to meet their own. For Habitat II this means human settlements which meet the economic and social needs of their inhabitants and visitors while reducing damage to the environment to levels that do not endanger longer term viability. The focus of this national agenda is on the UK's urban areas. Its purpose is to record what is actually being done and what is planned to improve the quality of life in cities, towns and villages in ways which are consistent with the aims of sustainable development.

Sustainable Urban Development Volume 4

Sustainable housing is generally used to describe housing that is environmentally friendly and resource-efficient over the lifetime of the building. Homes are designed to have the least possible negative impact on the environment. This means energy efficiency, avoiding environmental toxins, and responsibly using materials and resources while having positive physical and psychological effects on inhabitants. This book presents a comprehensive overview of sustainable housing, starting from legislation and ending with the design and configuration of homes.

Greening the Built Environment

The English planning system is in crisis, argue the authors of this provocative new book. Reflecting on controversial new Government reforms and deregulation, Kate Henderson and Hugh Ellis provide a comprehensive analysis of these reforms, assessing the implications and significance for the future. They highlight why planning is so essential to quality of life and set out 10 evidence-based steps to rebuild the planning system in England. Drawing on policy and practice examples from across the UK and internationally, the book is a manifesto for change. It provides a direct and vigorous challenge to the current structure and policy of planning that should ignite a debate about the values that shape its future.

Sustainable Settlements and Shelter

This Special Issue explores the cross-disciplinary approaches, methodologies, and applications of socio-environmental vulnerability assessment that can be incorporated into sustainable management. The volume comprises 20 different points of view, which cover environmental protection and development, urban planning, geography, public policymaking, participation processes, and other cross-disciplinary fields. The articles collected in this volume come from all over the world and present the current state of the world's environmental and social systems at a local, regional, and national level. New approaches and analytical tools for the assessment of environmental and social systems are studied. The practical implementation of sustainable development as well as progressive environmental and development policymaking are discussed. Finally, the authors deliberate about the perspectives of social-environmental systems in a rapidly changing world.

Accounting for Sustainability

If businesses and other organizations are to meet the many and complex challenges of sustainable development, then they all, both public and private, need to embed sustainability considerations into their decision-making and reporting. However, the translation of this aspiration into effective action is often inhibited by the lack of systems and procedures that take sustainability into account. Accounting for Sustainability: Practical Insights will help organizations to address these issues. The book sets out a number of tools and approaches that have been developed and applied by leading organizations to:- embed sustainability into decision-making, extending beyond an organization's boundaries to take into account suppliers, customers and other stakeholders;- measure and link sustainability and financial performance;- integrate sustainability into 'mainstream' reporting, both to management and external stakeholders. In-depth cases studies from Aviva, BT, the Environment Agency, EDF Energy, HSBC, Novo Nordisk, Sainsbury's and West Sussex County Council show in detail how accounting for sustainability works in practice in a wide range of organizational contexts. Published with The Prince's Charities: Accounting for Sustainability

Outlines and Highlights for Accounting for Sustainability

Never HIGHLIGHT a Book Again! Virtually all of the testable terms, concepts, persons, places, and events from the textbook are included. Cram101 Just the FACTS101 studyguides give all of the outlines, highlights, notes, and quizzes for your textbook with optional online comprehensive practice tests. Only Cram101 is Textbook Specific. Accompanys: 9781849710664 .

Sustainability Accounting and Accountability

Sustainability accounting and accountability is fundamental in the pursuit of low-carbon and less unsustainable societies. Highlighting that accounting, organisations and economic systems are intertwined with sustainability, the book discusses how sustainability accounting and accountability broaden the spectrum of information used in organisational decision-making and in evaluating organisational success. The authors show how sustainability accounting can prove to be transformative, but only if critical questions are sufficiently addressed. This new and completely rewritten edition provides a comprehensive overview of sustainability accounting and accountability. Relevant global context and key concepts are outlined providing the reader with the conceptual resources to engage with the topic. Drawing on the most recent research and topical practical insights, the book discusses a wide variety of sustainability accounting and accountability topics, including management accounting and organisational decision-making, sustainability reporting frameworks and practices, as well as ESG-investments, financial markets and risk management. The book also highlights the role accounting has with key sustainability issues through dedicated chapters on climate, water, biodiversity, human rights and economic inequality. Each chapter is supplemented with practical examples and academic reading lists to allow in-depth engagement with the key questions. Sustainability Accounting and Accountability walks the reader through a spectrum of themes which are essential for all accountants

and organisations. It helps the reader to understand why our traditional accounting techniques and systems are not sufficient for navigating the contemporary sustainability challenges our societies are facing. This key book will be an essential resource for undergraduate and postgraduate instructors and students, as an entry point to sustainability accounting and accountability, as well as being a vital book for researchers.

Sustainability Accounting and Accountability

This exciting book is one of the first textbooks in the fast growing area of sustainability accounting. Contributed to, and edited by an impressive array of internationally renowned authorities, it focuses on the use of sustainability accounting both as an external accountability mechanism (external reporting) and as a tool for helping managers assess and manage the social and environmental impacts of their operations (management accounting). Using real-life examples and case studies to emphasize the links between the conceptual basis and issues in practice, this outstanding book addresses the growing interest among both practitioners and academics in social, environmental and ethical accountability, as interpreted through the lens of sustainable development.

Accounting for Sustainability: Asia Pacific Perspectives

This book advances the understanding of corporate sustainability and challenges and roles of sustainability accounting in the Asia-Pacific region. The Asia-Pacific region has shown fast economic growth for several decades which is expected to continue. In this context, Asia has become the “production engine” of the global economy. At the same time scientific reports reveal that some planetary boundaries are crossed, for example relating to biodiversity and climate change. Companies in the Asia-Pacific region are therefore increasingly challenged to reduce their environmental impacts, to document their social contribution and to contribute to sustainable development. Key approaches to identify sustainability problems and challenges, to support improvement processes and to back up sustainability contributions include accounting and reporting. In contrast to the high relevance of accounting and reporting for corporate sustainability for the Asia-Pacific region, academic research has so far been dominated by Western researchers and pre-dominantly dealt with Western and Japanese cases and approaches. It is thus time to take account of Asian perspectives on accounting and reporting for sustainability in the Asia-Pacific region.

Accounting for Sustainability

This book provides a broad overview of how sustainability reporting has grown, how it is used now and where it is heading. Daily, we read and hear in various media about concepts such as corporate social responsibility (CSR), sustainability reporting, sustainability accounting, environmental reports, corporate citizenship or environmental management systems. Accounting for Sustainability decodes this terminology by providing an accessible introduction to the topic that explores sustainability reporting from an internal and external perspective. It begins with an overview of how sustainability reporting has emerged and why it is important, before moving on to cover definitions of key terms and specific theories and frameworks. Subsequent chapters explore the role of financial management, sustainability standards, accounting communication and capital markets. With learning outcomes and study questions embedded in each chapter, this book will be of great interest to students of sustainability reporting and accounting, as well as practitioners taking related professional accreditations.

Resource Accounting for Sustainability Assessment

The demands placed on land, water, energy and other natural resources are exacerbated as the world population continues to increase together with the expectations of economic growth. This, combined with concerns over environmental change, presents a set of scientific, policy and management issues that are critical for sustainability. Resource Accounting for Sustainability Assessment: The nexus between energy, food, water and land use offers an approach for multi-scale, integrated assessment of this nexus. It presents a comprehensive and original method of resource accounting for integrated sustainability assessments. The approach is illustrated with three detailed case studies: the islands of Mauritius, the Indian state of Punjab, and the energy economy of South Africa. The relationships between flows of goods, services and materials in these case studies offer valuable insights. The book provides a much needed quality control on the information used in deliberative processes about policy and planning activities. This innovative book will be of interest to researchers, students

and practitioners in the fields of sustainability science, international development, industrial ecology, sustainable resource management, geography and ecological economics.

Towards Mainstreaming Integrated Reporting - Theoretical Landscape and Practical Insights

Master's Thesis from the year 2012 in the subject Business economics - Accounting and Taxes, grade: 1,7, Berlin School of Economics and Law, course: MA Accounting & Controlling, language: English, abstract: It appears that the process towards mandatory Integrated Reporting is inevitable. The businesses need to be prepared to take the first steps towards applying these new reporting principles to remain successful over long term. At the same time many practitioners raise many justified questions, as there is no established Integrated Reporting framework, guidelines or thorough business practice yet available. This Master Thesis examines the developments of Integrated Reporting theory and provides practical insights, based on a survey conducted among South-African listed entities, into how businesses perceive the new reporting concept. The focus of this thesis was to investigate, whether the current theoretical frameworks provide sufficient guidance on Integrated Reporting adoption, whether companies perceive value creation from applying Integrated Reporting principles, what were the main challenges and opportunities faced, and whether the Integrated Reporting should remain voluntary or become a mandatory requirement. In addition a critical analysis of the Integrated Reporting Discussion Paper published in September 2011 is provided.

Accounting, Accountability and Society

This book addresses the growing interest among policymakers, practitioners and academics in the evolution and the future implications of social, environmental and sustainability accounting. To do so, it examines the conceptual and practical application of accountability at multiple levels and contexts, and presents a range of case studies focusing on salient issues, perspectives and the potential of multidimensional accounting and reporting regimes. Intended for a diverse audience, the book allows readers to gain a better understanding of the topics, encourages dialogue and debate, and stimulates innovation in scholarship, policy and practice.

Measuring and Controlling Sustainability

Efforts to establish the measurement and control of sustainability have produced notable tools, but those instruments lack applicability in practice. Increasing the level of standardization of such tools also seems difficult to achieve, because the contexts surrounding the focal organizations differ considerably. Therefore, what we need is a systematic, interdisciplinary assessment of how to measure and control sustainability, so that we can establish an essential definition and up-to-date picture of the field. Measuring and Controlling Sustainability attempts to provide such an assessment in 17 chapters, organized into four main topic sections: (a) organizations and social value creation: concepts, responsibilities, and barriers; (b) accounting, measurement, performance, and diffusion of social value; (c) practical and managerial insights from real-life cases; and (d) choices, incentives, guidance, and ethics. This research anthology provides a comprehensive collection of cutting-edge theories and research that will further the development and advancement of measuring and controlling sustainable efforts in theory and managerial practice.

Foundations of Sustainable Business

The second edition of Sustainable Business prepares future business leaders to tackle the most crucial social and environmental issues of our time. This engaging textbook provides students with a comprehensive, balanced introduction to integrating sustainable business policies into all core business functions and processes. The text employs a qualitative-based learning process to help students understand how leadership, finance, accounting, risk management, marketing, supply chain management, and operations can be adapted to meet the sustainability goals of the 21st century. Looking at sustainable business from the managerial viewpoint, the fully-updated new edition explains how and why business is evolving due to increased consumer and regulatory pressure for sustainable performance. Business topics are first introduced in the same manner as traditional MBA programs, and then examined through the lens of sustainability. The text incorporates real-life examples of social and environmental leadership to demonstrate the efficacy of good sustainable business decisions, and illustrates the negative ramifications of outdated, purely economic-driven managerial decision-making. Influential concepts based on interdisciplinary research in sustainability are discussed in detail, and practical insights address how to turn policy into practice in the workplace.

How Can Management Accounting Serve Sustainability?

The Business Guide to Sustainability is a practical introduction to implementing a comprehensive sustainability strategy in any organization. Written by top business consultants, this useful book can be applied in both large and small enterprises. This edition shifts away from a discussion of CSR to focus more squarely on sustainability. It explores strategies for implementing sustainability in each of the functional areas of the corporation (accounting, HR, operations, etc.), while providing examples from a range of sectors, including manufacturing, services, and government. The book also includes the authors' S-CORE assessment tool to help organizations determine whether they are on the right track, identify new opportunities, and assign accountability and responsibility. Brimming with interesting stories and examples, and covering new developments such as the emergence of BRICs and the effects of the Great Recession, this book will interest managers, business owners, and students for whom sustainability is a priority.

The Business Guide to Sustainability

Current modern companies, which are also the key factors of a global economy, are subject to increasing pressures to conduct their business in an environmentally responsible manner, due to social and environmental problems. Improving long-term environmental performance can bring economic benefits to those companies that are innovative and environmentally sensitive, especially by integrating environmental information into their business strategies. Considering all the changes, sustainability reporting, management, and financial accounting becomes a powerful information tool for executives, managers, and employee teams to gain insights and make better decisions. Along with concepts such as ethical, controlling, auditing, management, and financial accounting, reporting provides value with the decision-making process. All these debates underline the major responsibility of users when configuring accounting and finance models and thereby in modelling business information. Sustainability Reporting, Ethics, and Strategic Management Strategies for Modern Organizations proposes an interdisciplinary perspective and explores various theoretical and practical approaches of ethical standards, management accounting, and their impact in the 21st century on different areas of activity. It contrasts external financial accounting for government regulators and the investment community with internal management accounting for managers to leverage for decision making. In addition, the book examines the role of management accounting and sustainability reporting from other points of view such as ethical standards, corporate social responsibility, creative accounting, green accounting, environmental indicators, e-accounting, KPI, lean accounting, controlling, auditing, reporting, etc., offering a number of new insights into management accounting. It is intended for chief financial officers, financial controllers, business analysts, financial planners, financial analysts, budgeting managers, executives, managers, academicians, researchers, and students.

Sustainability Reporting, Ethics, and Strategic Management Strategies for Modern Organizations

The concept of the 'triple bottom line' (TBL) - the idea that business activity can simultaneously deliver financial, social and environmental benefits - was introduced in the early 1990s. A decade on, The Triple Bottom Line: Does it All Add Up? brings together the world's leading experts on corporate

responsibility to assess the implications, benefits and limitations of the TBL. This collection provides a review of what has already been achieved in stimulating change in corporate culture and bringing businesses to an appreciation of the importance and benefits of corporate social responsibility (CSR) and good environmental performance. It further explores the conceptual and practical limits of the metaphor of the TBL and sets out what can be achieved through regulation and legislation, presenting detailed professional procedures for environmental accounting and management and social auditing. The contributors' wealth of experience and insight provides a vivid picture of how much attention is now being focused by businesses on delivering more than just financial targets, and they clearly outline the necessary steps for successfully continuing along this trajectory.

Proceedings of the 3rd International Conference: Quantitative and Qualitative Methodologies in the Economic & Administrative Sciences (QMEAS 2013)

This Handbook explores how accounting, accountability and governance are interconnected, and demonstrates that they must operate effectively together in establishing good personal and organizational behaviour in entities of all types around the globe. It will be crucial for academic researchers working within the fields of accounting, economics, corporate governance, accountability, management and business and be beneficial for accounting, economics and management professionals seeking to clarify and expand upon their knowledge for effective application.

The Triple Bottom Line

This book takes the concept of social audit and lifts it beyond the role of functioning largely as a management tool. The book proposes a system in which social audit is regulated so as to provide a mechanism for effectively promoting corporate accountability in society. Taking this as its theme, this book provides both a conceptual explanation of the developmental perspectives of social audit regulation and empirical evidence of the impact of social audit practice from different parts of the world. It is the first book to explore the issues and challenges related to the development of effective social audit regulation.

Handbook of Accounting, Accountability and Governance

This Handbook provides a comprehensive study of research, practice and policy at the nexus of accounting and sustainability, or sustainable development. Chapters explain key drivers of developments at the nexus, critique those developments, summarise the findings of research on key themes in the field, and suggest areas for further research, offering evidence-based practice and policy solutions.

Social Audit Regulation

The second edition of Craig Deegan and Jeffrey Unerman's market leading text presents the various theories of financial accounting through a balanced and dynamic approach. Students are given all the tools to engage with these theories and are encouraged to critically evaluate and challenge them. Clearly written and user friendly, this new edition provides comprehensive coverage of internationally developed accounting theories from a European perspective.

Handbook of Accounting and Sustainability

This is the fourth in a series publishing the best contributions on environmental management accounting (EMA) from around the world. This volume brings together international examples of leading thinking and practice in this rapidly developing area. This is the most comprehensive volume to date covering theory, practice and case studies on sustainability accounting and reporting. It covers tools, frameworks, concepts as well as case studies and empirical analysis.

EBOOK: Financial Accounting Theory: European Edition

This book offers up-to-date insights into the theory and practice of Corporate Social Responsibility (CSR) and sustainability management. Gathering contributions by a team of international scholars, it shares perspectives from a variety of academic disciplines, including management and tourism as well as accounting, higher education research and supply chain management. Guided by the credo of achieving 'Responsible Business for Uncertain Times and a Sustainable Future,' the authors present their latest reflections on, and possible solutions for, sustainable and responsible business practices.

All of the contributions presented here are critical, evidence-based and solution-oriented, making the book both practical and insightful reading for academics and practitioners alike.

Sustainability Accounting and Reporting

In a world increasingly shaped by environmental, social, and governance (ESG) concerns, the need for transparent and actionable sustainability reporting has never been greater. "Navigating Sustainability: Practical Insights from the ESG Carbon Disclosure Project" delves into the heart of this pivotal movement, offering a comprehensive guide to understanding and effectively participating in the ESG - Carbon Disclosure Project (CDP). This insightful book presents a wealth of practical working papers, rich with real-world examples and expert guidance, to demystify the complex landscape of ESG reporting and the CDP. From corporate leaders to sustainability professionals and concerned citizens, this book is a valuable resource for anyone eager to embrace the sustainability journey. Practical Reporting: Navigate through step-by-step guidance on preparing and submitting ESG disclosures to the CDP. Learn how to gather, organize, and analyze data to meet the project's stringent requirements. CDP is a well known environmental standard for reporting, aligned with TCFD (Task Force on Climate Related Financial Disclosures) recommendations. CDP data meet demand of investors and customers of corporate bodies as well as it tracks progress towards building sustainable economy. This template was designed to be used in of the following ways: CDP provide details on what information is required to be submitted. Stakeholders can request information from corporate bodies through CDP questionnaire. The questionnaires which are required to be answered by companies and submitted to CDP are guided in this sheet. CDP (Carbon Disclosure Projects) The content provided on this website does not, and is not intended to, constitute legal, accounting, tax, investment, compliance or other professional advice and services; instead, all information, content, and materials available on this site are for general informational purposes only. The content is provided "as is;" no representations are made that the content is error-free or up to date. Investor priorities are changing rapidly with respect to disclosure requirements. They are demanding reporting and disclosures for environmental, social and governance measures taken by the reporting organization. CDP, Carbon Disclosure Project, is an international not for profit organization that runs a disclosure system design for various bodies such as governments, investors and corporate bodies to assess environmental impact and to take consequent actions. CDP is a well known environmental standard for reporting, aligned with TCFD (Task Force on Climate Related Financial Disclosures) recommendations. CDP data meet demand of investors and customers of corporate bodies as well as it tracks progress towards building sustainable economy. CDP provide details on what information is required to be submitted. Stakeholders can request information from corporate bodies through CDP questionnaire. The questionnaires which are required to be answered by companies and submitted to CDP are guided in this sheet. Questionnaire provided by CDP in the online disclosure platform is required to be submitted through Online Response System (ORS). Sector specific questions may appear for those Companies in high impact sectors affecting energy emission, biodiversity, carbon footprints, etc. Those sectors may include cement, chemicals, oil and gas, transport service, coal mining, paper industry, etc. Companies are eligible to fill minimum version questionnaire if they are filing the questionnaire for the first time or annual revenue/sales are less than US \$ 250 million. CDP use scoring methodology to measure impact through three detailed questionnaires.

Responsible Business in Uncertain Times and for a Sustainable Future

Sustainable Management: A Complete Guide for Faculty and Students is both a textbook for students, as well as a teaching guide for educators. With a full introduction to sustainable management, the book covers a wide range of subject areas relevant to business and management students. It enables faculty to incorporate sustainability and climate solutions into their modules, and is also very accessible for self-directed studies. This third edition features fully updated chapters on how to integrate the Sustainable Development Goals into key disciplines in business, including economics, operations, marketing, HR, strategy, and financial reporting. We also cover topics such as corporate peacemaking, greenhouse gas management and crowdsourcing. The book offers a new chapter on how to integrate climate solutions and climate change mitigation education into business and management schools, as well as many ideas in each chapter on how to do so. The chapter on employability and sustainability was fully redesigned adding new resources, which can be used in any educational establishment. Educators in business schools and trainers in organisations will find short readymade seminars/workshops and a wide array of learning resources supported by a companion website.

Navigating Sustainability

Invaluable guidance for complete integration of sustainability into reporting and performance management systems Global businesses are under close scrutiny from lawmakers, regulators, and their diverse stakeholders to focus on sustainability and accept responsibility for their multiple bottom line performance. Business Sustainability and Accountability examines business sustainability and accountability reporting and their integration into strategy, governance, risk assessment, performance management and the reporting process. This book also highlights how people, business and resources collaborate in a business sustainability and accountability model. Looks at business sustainability and accountability reporting and assurance and their incorporation into the reporting process Focuses on how the business sustainability and accountability model are impacted by the collaboration of people, business, and resources Presents laws, rules, regulations, standards and best practices relevant to business sustainability performance, reporting and assurance Organizations worldwide recognize the importance of all five EGSEE dimensions of sustainability performance and accountability reporting. However, how to actually assess sustainability risk, implement sustainability reporting, and obtain sustainability assurance remain a major challenge and best practices are evolving. Straightforward and comprehensive Business Sustainability and Accountability hits on all of the hottest topics around sustainability including multiple bottom line (EGSEE) performance and reporting, related financial and non-financial key performance indicators (KPIs), business social responsibility and environmental reporting.

Sustainable Management

Accounting sustainably involves accounting for and to the natural environment, and accounting for and to society, including groups currently oppressed or disadvantaged by unsustainable processes and practices. This book creates a compelling case for the inclusion of sustainability at the heart of accounting educational programmes, offering critical lessons and identifying risks to avoid when designing accounting programmes and courses. Accounting sustainability has moved from the side-lines of policy discourses, accounting institutions, professional accounting practices, and research activities into the mainstream. The chapters in this proposed book engage in a critical dialogue to facilitate change in accounting education for sustainability. They dispel the myth that accounting for sustainability is an oxymoron, bad for business, unrelated to practice, or contrary to professional accounting bodies' accreditation requirements. This book was originally published as a special issue of Accounting Education.

Corporate Sustainability

This book discusses the foundations of social and environmental accounting and highlights local differences in countries like Italy and Bulgaria. It also describes the institutional environment, which affects the development and application of environmental accounting and reporting, as a basis for evaluating current achievements and the future steps that need to be taken to develop and spread environmental accounting. The book is unique in presenting exemplary cases from different emerging and developed countries. It is a valuable resource for theorists in the field, practitioners in companies, as well as investors and other stakeholders. Moreover, it provides students with the necessary theoretical constructs, empirical studies as well as practical and managerial tools to allow for a quick orientation in the methodology, techniques and selected practices used in environmental accounting and reporting.

Sustainability in Accounting Education

The management and balancing of social, environmental and economic sustainability is one of the most complex and urgent challenges facing both private and public sector organizations today; with these challenges of sustainability posing many risks to, and many opportunities for, advancing the aims and performance of organizations. Accounting and accountability processes and practices provide key tools to help organizations to more effectively identify and manage the risks and opportunities of sustainability. Popular features from the first edition are retained, whilst recent developments in theory and practice are accounted for. New substantive chapters on water resource accounting, carbon accounting, and decision making have been introduced and the book continues to benefit from a host of expert contributors from around the world, including Jesse Dillard, Rob Gray, Craig Deegan. This comprehensive and authoritative textbook will continue to be a key resource for students of accounting and sustainability, as well as being a vital tool for researchers.

Environmental Accounting and Reporting

This timely handbook provides a current and comprehensive examination of integrated reporting, both practical and research-based. It offers insights and different perspectives from more than 60 authors, including representatives of the International Integrated Reporting Council, Integrated Reporting Committee of South Africa, professional bodies and audit firms, as well as leading academics in the fields of integrated reporting, sustainability reporting and corporate social responsibility. This collected work provides an in-depth review of the development of integrated reporting, with a focus on the interpretation and guidance provided by the International Integrated Reporting Council. It encourages the development of new thinking and research topics in the area of integrated reporting (such as links between integrated reporting and reports focused on financial and corporate social responsibility matters), as well as showcasing how integrated reporting issues are seen and practiced in different parts of the world. The chapters include reviews of the most recent research, practitioner viewpoints, conceptual pieces, case studies and disclosure analyses. Accessible and engaging, this handbook will be an invaluable overview for those new to the field or those who are interested in ensuring they are up to date with its developments, as well as those who are concerned with how to construct an integrated report.

Sustainability Accounting and Accountability

This book aims to explore new challenges and prospects for sustainability accounting by considering a large spectrum of theoretical lenses and research methods. It brings together articles that consider main areas of accounting, in order to review and advance theorizations and methodological applications to the study of all main accounting fields.

The Routledge Handbook of Integrated Reporting

Sustainability is becoming a business megatrend. This book looks into why controlling departments are rarely involved in sustainability topics and do not contribute to corporate responsibility. The author postulates the following assertion: responsible controlling is indispensable in making an organization more responsible. Inside, you'll learn a specific course of action for the development of a responsible controlling framework toward decision making, which is based on an ethically driven, reflective fundament in order to make a company a responsible business. Through the development of a responsible controlling framework, the author gives recommendations for how controlling should be altered in terms of both tools and mindsets. A twelve-step responsible controlling roadmap is detailed, showing how controlling can contribute to foster a corporation's responsible behavior and how sustainability topics can be integrated in management decisions. The conclusion of Responsible Management Accounting and Controlling reiterates the main goal of this book: responsible controlling must first and foremost be understood as a mindset. Responsible controlling, therefore, is an uncommon but indispensable approach of making an organization more responsible.

Accounting and Control for Sustainability

Advances in Environmental Accounting and Management aims to enhance the understanding of global environmental issues and improve environmental performance and disclosures.

Responsible Management Accounting and Controlling

Sustainability Matters is a compilation of some of the best research papers submitted by students from the National University of Singapore's multi-disciplinary and inter-disciplinary graduate programme in environmental studies, as their MSc dissertations in Environmental Management [MEM]. This collection is for the period 2014/2015 to 2015/2016. Entitled Sustainability Matters: Environmental Management in the Anthropocene, this is the sixth volume in the series, and comprises 15 of the best research papers completed during this period. The papers have been edited for brevity. They analyse the many challenges to effective environmental management covering countries including China, Vietnam, Singapore, Indonesia, Pakistan, Bangladesh, the EU, and USA. Issues examined include biodiversity conservation, environmental science, environmental governance and management, energy, and urban studies. The first compilation, Sustainability Matters: Environmental Management in Asia was published in 2010 and comprised the best papers from 2001/2002 to 2006/2007. The second, Sustainability Matters: Challenges and Opportunities in Environmental Management in Asia, was published in 2011, and comprised the best papers from 2007/2008 and 2008/2009. The third and fourth compilations, Sustainability Matters: Asia's Green Challenges, and Sustainability Matters: Asia's Energy Concerns,

Green Policies and Environmental Advocacy, comprised the best papers from the periods 2009/2010 and 2011/2012 respectively. The fifth compilation, Sustainability Matters: Environmental and Climate Changes in the Asia-Pacific, was published in 2015 and comprised the best papers for the periods 2012/2013 and 2013/2014. The papers are edited by five staff members from different disciplines in the MEM programme: Lye Lin-Heng, Harvey Neo, Sekhar Kondepudi, Yew Wen-Shan, Judy Sng Gek-Khim. Contents: Biodiversity & Conservation: Coral Reef Restoration in Singapore — Past, Present and Future (Ng Chin-Soon Lionel & Chou Loke-Ming) Wildlife Trade in China and Vietnam: A Comparative Study of the Implementation of the Convention on International Trade in Endangered Species of Wild Fauna and Flora (CITES) (Sallie Chia-Wei, Yang & Lye Lin-Heng) Environmental Science: Status and Trends of Phytoremediation in Singapore (Fam Mei-Ling & Sanjay Swarup) Managing the Risk of Non-indigenous Marine Species Transfer in Singapore Using a Study of Vessel Movement (Chin-Sing Lim, Yi-Lin Leong & Koh-Siang Tan) Biogenic Volatile Organic Compounds (BVOCs) Emissions by Selected Street Trees in Singapore (Kho Yue-Min Veron & Tan Puay-Yok) Environmental Governance & Management: Sustainability Reporting in Singapore (Loh Zhiyang & Audrey Chia) Air Quality Improvement and Greenhouse Gas Mitigation in Pakistan: An Integrated Approach (Kaleem Anwar Mir & Rajasekhar Balasubramanian) Self-Management in Environmental Management Philosophy (Zhang Yuzhe & Cecilia Lim) Evaluating EIA Follow-ups in China and Singapore (Deng Mao & Rick Reidinger) Larger Population for Singapore: A Utilities Perspective (Ang Chun-Wei Alan & Victor R Savage) Energy: Roles of Renewable Energy for Sustainable Development in Industrial Plants (Tan Choon-Puay & Tong Yen-Wah) A Comparative Analysis of the Regulatory Framework Between the United States of America and the European Union on the Use of "Fracking" in Unconventional Hydrocarbons Development (Carmelita Leow & Namrata Chindarkar) Urban Studies: Sustainable Urbanism at Neighbourhood Level: Possibilities and Practice in Planned

Accounting for the Environment

This book proposes an integrated approach to sustainability reporting, the goal being to overcome certain limitations of the well-established additive approach, where the reporting of environmental, social and economic issues is sequential, but separate. It argues that, in order to successfully communicate its commitment to sustainability, a company should report on how environmental and social issues impact its way of doing business, namely its business model, contributing to value creation. Thus, a reporting framework for business models that encompasses sustainability is presented. In turn, a number of illustrative examples are examined to show how business model reporting could be optimally used to provide effective and integrated sustainability reporting. The book also offers a broad analysis of corporate sustainability reporting, which includes a discussion of the theoretical background, an explanation of why companies provide sustainability reporting, a description of the current regulatory framework for sustainability disclosure, and a review of sustainability reporting literature that shows the main characteristics of sustainability disclosure practices. Given its scope, the book will be of interest to all researchers and practitioners working for companies or organizations that aim to support, implement and improve their sustainability reporting, by adopting a more integrated approach that interconnects environmental and social aspects with the economic and financial results via the business model. The book also offers a valuable reference guide for social science researchers, including PhD students, interested in a discussion of the latest literature on sustainability, corporate social responsibility, and the communication of business models.

Sustainability Matters: Environmental Management In The Anthropocene

Summary: "This book brings together case study examples in the fields of sustainability, sustainable development, and education for sustainable development"--

Integrated Sustainability Reporting

Sustainability Accounting, Management Control and Reporting: A European Perspective traces a picture of innovative performance measurement tools and approaches to drive organizations to implement their shared value and sustainability strategy, considering different perspectives around accounting, managerial control and reporting. In recent years, organizations managing their responsible approach with relevance and pressure from stakeholders and regulations has proven to be a major challenge. During the first two decades of the 21st century, many companies have reached a real maturity in this area and have deployed coherent responsible approaches that are integrated into their overall strategy. It is now a matter of steering these responsible approaches from an accounting and man-

agerial standpoint, but also of reporting on them. It requires the simultaneous use of comprehensive accounting, controlling and reporting tools. This book provides an innovative perspective on sustainable management control, comprehensive accounting and integrated reporting, presenting the most recent proposals and the main critical issues. Aimed at researchers, academics, managers, business leaders and advanced students, the book will be especially valuable to those in the fields of corporate social responsibility, strategic management, and accounting.

Handbook of Research on Pedagogical Innovations for Sustainable Development

This introductory textbook explores key issues and recent discussions within the field of corporate sustainability and social responsibility, through theoretical and practical perspectives. Written by an international team of experts, the chapters introduce the actors and corporate processes that shape firms' management of environmental, social and governance (ESG) issues. Spanning strategy, communication, changing regulation and governance, the book grapples with critical issues such as anti-corruption, labour rights and climate change, balancing incisive critique with suggestions for meaningful change. This analysis, supported by study questions and further learning resources in each chapter, equips students to tackle sustainability challenges effectively in their future work. A regularly updated companion website provides adaptable lecture slides and case studies with discussion questions for instructors. This is an essential text for undergraduate and postgraduate courses on corporate sustainability, CSR and business ethics, and is also relevant to political science, international relations and communications.

Sustainability Accounting, Management Control and Reporting

This book critically examines the implementation and adoption of integrated reporting (IR) in organizations and corporations. A relatively new area of policy and practice, IR has rapidly gained considerable prominence since the formation of the International Integrated Reporting Committee in 2010. The book analyzes the outcomes and benefits as well as the shortfalls of integrated reporting. It offers an introduction to the foundations of IR and a comprehensive overview of its use through a number of detailed case studies. Lastly, it discusses the outlook for further developments in sustainability accounting and reporting.

Corporate Sustainability

Sustainability is a growing area of research in ecology, economics, environmental science, business, and cultural studies. Specifically, sustainable waste disposal and management is a growing concern as both solid and liquid wastes are rapidly expanding in direct correlation with population growth and improved economic conditions across regions. The Handbook of Research on Waste Management Techniques for Sustainability explores the topic of sustainable development in an era where domestic and municipal waste is becoming a concern for both human and environmental health. Highlighting a number of topics relating to pollution, green initiatives, and waste reduction in both the public and private sector, this research-based publication is designed for use by environmental scientists, business executives, researchers, graduate-level students, and policymakers seeking the latest information on sustainability in business, medicine, agriculture, and society.

Integrated Reporting

This book presents a comprehensive and expert-led insight into the role, types, practises and determinants of corporate narrative reporting (CNR). It provides a detailed overview of the importance of narrative disclosure in understanding the full annual report and, consequently, company performance and future prospects. CNR comprises integral information presented in the front half of the annual report, which helps to tell the full story of a business, providing a comprehensive overview and understanding of both its past and future performance. Supported with illustrative tables and figures throughout, this volume contains a plethora of carefully selected chapters, featuring the analytical insight of knowledgeable academics and researchers from all over the world. Using different data collection and analysis methods, it links and advances theory and practice in the disclosure and presentation of non-financial information in annual reports and other disclosure channels. The book is logically structured into four parts: Narrative Reporting: The State of the Art Empirical Research on Narrative Reporting Narrative Sustainability Reporting Narrative Reporting in Times of Crisis Providing a global insight into CNR in practice, Corporate Narrative Reporting is an invaluable resource for both students and practitioners interested or involved in preparing, reviewing/auditing, analysing and

understanding annual reports. It should also be of particular interest to policymakers, regulators and investors.
