Start Up of a WW2 Submarine Diesel Engine of a German U-Boat = Start Up of a WW2 Submarine Diesel Engine of a German U-Boat ꝑꝑHD1080ide 20,839,563 views 5 years ago 6 minutes, 22 seconds - Start up of a 6-cylinder diesel engine. The submarine engine RS 34 S was used in the Type XXIII submarines. Originally, it was ...

The young machine operator begins to pre-lubricate the engine.

After reaching 2 bar oil pressure, the older machine operator turns the engine manually.

The engine is turned by compressed air with cylinder taps opened to blow out water or oil, if present.

The engine is still being pre-lubricated.

The machine operator closes the cylinder taps.

Water pump switched on (control cabinet in the background).

Fuel valve opened.

Injection pumps on filling: Probably, this means that the injection pumps are set to maximum as a basic setting (big wheel). The final fuel amount is set by the governor (small wheel in the background).

Preheating

Glowplugs are glowing.

Engine start by compressed air.

The machine operator checks the combustion by opening the cylinder taps shortly.

Finally, he raises the RPM by adjusting the governor.
