The social responsibility of business... - A position paper on Milton Friedman

Seminar paper from the year 2004 in the subject Business economics - Business Ethics, Corporate Ethics, grade: A- = 1-, International University in Germany Bruchsal (Department of Sciences and Liberal Arts), language: English, abstract: In the aftermath of recent business scandals such as Enron, Worldcom, and Parmalat the discussion about 'Ethics in Business', which was not exactly a hot topic during the last 20 years or so, has been inflamed anew. However, ethical corporate governance, the catch line of countless discussions in recent times, is only one but many aspects to ethics in business. This paper will focus on the aspect of corporate social responsibility rather than the issue of corporate governance. Although not as hot as corporate governance, corporate social responsibility is certainly no less important as incidents like the Exxon Valdez accident in 1989 clearly demonstrate. In fact, corporate social responsibility even covers the topic of corporate governance since governance failures as observed at companies like Enron do not only hurt a company's shareholders but to a large extent also most of a company's stakeholders - which in the end often make up a considerable part of society. Milton Friedman's (in-)famous 1970 article "The social responsibility of business is to increase its profits" will serve to represent the libertarian view which assumes great credibility to concepts like 'Agency Theory' and the 'Invisible Hand'. After elucidating Friedman's 'classical' liberalist approach, which in itself makes perfect sense, this paper will point towards the deficiencies of Friedman's argument. By applying a broader understanding of how corporate social responsibility is to be derived

it becomes obvious that Friedman is telling only part of the story. This consideration will then serve as a foundation for the attempt of developing a framework of corporate social responsibility which goes beyond increasing profits only. [...]

Information Technology and Business Ethics

In August 1976 the research seminar 'Decision-making in business' was organized at Nijenrode, The Netherlands School of Business. More than fifty scientists and practitioners from nine countries presented research papers in one of the six discussion groups. Some of them also presented some of their ideas in front of a large mixed audience at a one-day symposium. Many of the papers presented at Nijenrode were of such a high quality that the decision to publish a selection of them was an easy one. At the same time the new series Nijenrode studies in business was initiated. All who were involved, the policy committee 'Of the Nijenrode studies, the advisory and editorial board of the series, the publisher, and the organizing committee of the seminar and symposium, acclaimed the idea of publishing three volumes in the new series. A collection of eleven papers could be grouped under the title Trends in managerial and financial accounting, and has been published as volume 1 of this series. A collection of fourteen papers has been published as the second volume under the title Trends in financial decision making, while this volume, consisting of twelve papers (and an introduction) explores the theme Trends in business ethics. The introduction by Stanley L. Jakiwas written for the symposium. It suggests why the papers of Pjotr Hesseling, Antoine Kreykamp, and Richard H. Viola, which were not presented at Nijenrode, are introduced here.

Understanding Business Ethics

Seminar paper from the year 2002 in the subject Business economics - Business Ethics, Corporate Ethics, grade: 1,00, University of Abertay Dundee (Business Department), course: Managing Organisations, 15 entries in the bibliography, language: English, abstract: A few years ago Shell, a British oil-company, had to close an old oil-rig in the North Sea. All relevant scientists and governments agreed pulling it down into the sea would be best in terms of environment and costs. But when the idea was launched by Shells managers there was a lot of protest all over Europe. People, heavily supported by Greenpeace, started to boycott Shells petrol stations and stopped buying in their shops. As a result the company decided to rebuild the oil-rig on land accepting several negative consequences. This essay therefore aims by way of the examples of Shell and others to become more familiar with the issue of practical business ethics and it gives details about its routes and meanings. Also, the reasons for implementing ethical action into daily business are explained more detailed and questions of why the management has to behave socially responsible are tackled. Thoughts are spent on "How could ethical behaviour be introduced into the business world?" and 'social responsibility' is divided into three main strands and directions. And finally, some practical advice for future behaviour is given, too.

Business Environment and Business Ethics

This book investigates how different types of Japanese management systems are able to motivate stakeholders, including employees, top management, stockholders, customers and transaction partners, to participate actively in the organizational behavior that improves business performance. The var-

ious systems motivating stakeholders are examined in five sections: strategy and business restructuring for enhancing the business value; management control systems and budgeting; cost management; management accounting for supply chain and shared services; and, process management.

Drawing on Relevant Theories of Business Ethics, Examine Managerial Approaches Used in Dealing with Ethical Dilemmas

It contains the ethical decision making process, the individual factors, and the organizational factors.

Integrating Ethics with Strategy

Seminar paper from the year 2016 in the subject Business economics - Business Ethics, Corporate Ethics, grade: 1,7, Leuphana Universität Lüneburg, language: English, abstract: The aim of this essay is to analyze to what extent quotations in academic articles and/or monographs that solely exist out of secondary and not primary sources are problematic from the perspective of academic ethics in general and business ethics in particular. Despite being an accepted tool in academic writing and research, the excessive use of secondary sources resembles the exploitation of foreign efforts in the procurement and analysis of primary sources. The research method of this essay is based on an extensive literature research to work out central aspects of academic ethics being relevant for the creation of academic articles and monographs as products of scientific communities. Furthermore, different philosophical approaches are consulted to gain a comprehensive understanding of the business ethics approach and its fundamental pillars. The analysis comes to the conclusion, that citations solely from secondary sources and in the absence of a comprehensive confrontation with primary literature harm central values introduced by the European University Institute as the cornerstones of integrity and good scientific practice. From a business ethics point of view, the conduct violates rules of proportion and endangers the beneficence of (scientific) communities as it represents an act of selfishness to the own self-interest.

Business Ethics: Compliance Or Conviction

Seminar paper from the year 2004 in the subject Business economics - Business Ethics, Corporate Ethics, grade: 2, 85%, University of Applied Sciences Chur (SSTH Swiss School of Tourism and Hospitality, Chur), course: MBA, 7 entries in the bibliography, language: English, abstract: The topic of this paper might lead the cursory reader to the assumption that this is another countless academic paper about "Ethic." But "Ethic" is a topic, which is more than a current interest, and it belongs to each of us. The literature today tends to value independence, encouraging people to become liberated and do their own thing. The reality is that we are interdependent, and the independent model is not optimal for use in an interdependent environment that requires leaders and team players. Sometimes it is necessary to take a deeper look into value systems of persons, environments, and organizations. The main question is "How can people survive with integrity in the business environment?" and "How can organizations provide the employees with the necessary support for ethical behaviour in companies'."

The problem with relying on the Personality Ethic is that unless the basic underlying paradigms are right, simply changing outward behaviour is not effective. We see the world based on our perspective, which can have a dramatic impact on the way we perceive things. The character Ethic assumes that there are some absolute principles that exist in all human beings. Some examples of such principles are fairness, honesty, integrity, human dignity, potential and growth. Sometimes principles contrast with practices in that practices are for specific situations whereas principles have universal application. And especially for these situations it is necessary to have a "code of conduct" to lead the organization into an ethical direction, and to give the right support.

The Morality of Business Enterprise

The purpose of this paper is to analyse the importance of ethics in today's business. The concept of business ethics, which has been debated since the beginnings of trade, seems to be an oxymoron and the attention this controversial topic drew increased strongly in the last years. The changing relationships between the legislative role of governments and the regulations by businesses emphasize the important role of enterprises in the global economy. In this paper, the change in business ethics and their main impacts will be discussed as well as the influence of codes of ethics as an instrument of business ethics.

Secondary Sources in Academic Papers. The Perspective of Business Ethics

Choice of Technology in a Natural Resource-based Industry

Project Report from the year 2016 in the subject Business economics - Company formation, Business Plans, grade: 86.00, University of Maryland University College at Adelphi (Business Finance), course: Banking Finance, language: English, abstract: This paper presents the internal and external policy for Mactosh Company as an online retailer. Understanding Business Ethics

This book originated in a symposium on business ethics that took place in the Faculty of Commerce at the University of Canterbury in September of 1997. Professor Werhane, who was a visiting Erskine Fellow, provided the keynote address, and many of the papers in this collection were originally presented at this symposium. We are grateful to Kluwer Publishers for the opportunity to publish these essays in their series on International Business Ethics. We want to thank the Olsson Center for Applied Ethics at the Darden School, University of Virginia, and the Erskine Trust and the Department of Management at the University of Canterbury for their support of Professor Werhane's fellowship, research for this text, and funding for its production. We especially want to thank Lisa Spiro, who copy-edited and prepared the manuscript for publication. INTRODUCTION AND OVERVIEW This book originated in a symposium on business ethics that took place in the faculty of commerce, at the University of Canterbury, in September 1997. Professor Werhane, who was a visiting Erskine Fellow, provided the keynote address. Contributions to the proceedings were inter-disciplinary, spanning theory and practice. Subsequent contributions were obtained from within New Zealand and from Asia. The book starts off on rather a pessimistic note: the new managerialism (the kind of thing Scott Adams jokes about in the world-famous Dilbert cartoons) is economically suspect and psychologically damaging.

The Illusion of Objectivity, the Question of Ethics, Or Give the Right Support

An authoritative and practical guide to business ethics, written in an accessible-question-and answer format In today's turbulent business climate, business ethics are more important than ever. Surveys of employees show that misconduct is on the rise. Cover stories reporting indictments, prosecutions, and penalties imposed for unethical business conduct appear almost daily. Legislatures pass requirements elevating the levels of punishment and their enforcement against corporations and individuals.

Organizations face pressure to design and implement effective ethics and compliance programs. As a result, businesses and businesspeople are increasingly worried that their conduct might cross lines that put their wealth and reputations at risk. Business Ethics: What Everyone Needs to Know (R) explains what those lines are, how not to cross them, and what to do when they are crossed. Written for both businesspeople facing real-life dilemmas and students studying ethical questions, this succinct book uniquely surveys materials from moral philosophy, behavioral science, and corporate law, and shares practical advice. Experts J.S. Nelson and Lynn A. Stout cover a wide array of essential topics including the legal status of corporations, major ethical traps in modern business, negotiations, whistleblowing and liability, and best practices. Written in a short question-and-answer style, this resource provides engaging and readable introductions to the basic principles of business ethics, and an invaluable guide for dealing with ethical dilemmas.

Business Ethics: Compliance Or Conviction

This e-book brings together six papers around the topic of business ethics. In addition to examining the contrasting dimensions of ethical absolutism and ethical relativism which is most relevant in international business it is hoped that from this work further attention is given to the discussion of durability of ethical values and principles in business practices in the domestic marketplace, and in society at large.

The Importance of Codes of Ethics: Examination of the Need of Business Ethics and the Efficient Usage of Codes of Ethics for Good Corporate Governance

Seminar paper from the year 2015 in the subject Business economics - Business Ethics, Corporate Ethics, grade: 2.1, BPP University (Business School), course: MSc Accounting and Finance, language: English, abstract: Business ethics, governance system and risk management are very important issues for any organization. Lack in sufficient attention on these aspects has shown to result in the collapse of companies, such as Enron and WorldCom. The combination of effective governance and management systems and consideration of ethics during decision making will help to eliminate this threat. This report highlights Mercury's current governance arrangement and associated risks, and evaluates its decisions in the light of governance arrangements and ethics. Mercury's faces potential damages both non-financial and financial because of recent campaigning and publicity by rival newspapers about phone hacking and airbrushed photograph. As a result, the company may be involved in costly legal action, which has already happened against Mirror group, where 20 claimants took legal action against mirror group over phone hacking allegation. Readers have already started to boycott the products of Mercury, which will reduce the company's revenue and eventually do damage to the shareholders' wealth.

Policy Paper on the Mactosh Company

Ethics is a compendium of moral interpretations steeped in a multitude of religious and philosophical applications. It is subject to various cultural intrusions as well as independent personal interpretation. The study of international business and all related managerial disciplines usually includes ethical content. The majority of global management textbooks offer a chapter on ethics, and its often misaligned cousin, social responsibility. They tend to cover the subject matter by stating the problem and then reciting laws enacted to combat social injustice as well as including philosophical theories intended to provide generic direction. This iceberg approach, a topical view of the issues, leaves the average MBA student along with executive cadre longing for more specific guidelines.

Business Ethics in Theory and Practice

Seminar paper from the year 2016 in the subject Business economics - Business Ethics, Corporate Ethics, grade: 1,0, University of Applied Sciences Essen, language: English, abstract: The concept of Corporate Social Responsibility (CSR) becomes more and more important, as overcoming "the increasing environmental and social problems is one of the biggest challenges of this century". Over the last years the discussion about the duty of companies to assume responsibility for society is well underway. Not only in executive boards, politics or science the concept is gaining in popularity, also the media addresses the subject with increased regularity and presents responsible companies with its management approaches. On the other hand, hardly a day will pass without having to deal with headlines of large organizations who have crossed borders of business ethical behavior and moral acting. One example is the electronics manufacturer "Foxconn", one of Apple's former suppliers and a big player in its branch: 2010, the suicides of 18 young employees, as a result of the bad working conditions at the Foxconn factory plants in China, shook the employer giant and the international community. The illustrated dichotomy is a matter for reflection and therefore well suited for the present seminar paper. The following pages now then deal with the these main questions: - What is the purpose of CSR and is it suitable for the intention of business? - Do companies use CSR only as a calculated strategy to survive in this complex marketplace? If so – is this morally right? - How much worth do the CSR promises of companies in terms of today's times of globalization and growing competition actually have? The first chapters will give an overview on CSR as a theoretic basis for the following pages, referring to different concepts and definitions that exist. After that, chapter 3 deals with the applied example of Foxconn. First there will be given some facts and figures about Foxconn and the occurrences in the year 2010 in particular. In the next step the CSR activities will be shortly analyzed in order to contrast the applied CSR intention of Foxconn and the actual outcome.

Business Ethics - Through Time and Across Contexts

Seminar paper from the year 2015 in the subject Business economics - Business Ethics, Corporate Ethics, grade: 10.00, Lancaster University, language: English, abstract: The transnational corporations and globalisation of economic activities has led to two broader issues i.e. corporate social responsibility and corporate governance. Though, they are well appreciated by mass population but still it has certain negative socio-economic effects. As certain writers have pointed out, corporations are special organisations which have enormous impact and influence upon different economies. This is especially in context to the developing economies, where the local government don't have any other option but to go ahead with the terms and conditions of these corporations. In order to exploit the environmental

regulations, lower standards on working conditions and basic worker rights, many corporations from developed countries like United States have begun their operations in developing countries of Asia and Africa. But, these corporations claim that they create more jobs and work within the law. While some of these claims are now often unearthed and attacked by social activists and media.

Mercury's business ethics, governance system and risk management

Seminar paper from the year 2011 in the subject Business economics - Business Ethics, Corporate Ethics, Comenius University in Bratislava, course: Business Ethics, language: English, abstract: But what happens if the developed advertising campaign perfectly attracts the aimed target group but coincidentally discriminates a vulnerable group? Is it fine to make jokes based on elderly, printed on flyers which are thrown in every mailbox in the country? How should advertisers behave? This paper is going to examine some ethical claims and causes for thought in advertising ethics. It aims to assist advertisers in trying to behave as ethically as possible while struggling through the jungle of audience demands. In the first part some necessary theoretical definitions will be given. In the second and main part the ethical claims are described, subdivided in three key moral principles: Truthfulness, Dignity and Social Responsibility. In the last section an exemplary advertisement will be analyzed in order to show the work of seemingly ethics-unconscious advertisers.

Change of business perspective. An ethical reflection

The Journal of Business Ethics was founded by Alex C. Michalos and Deborah C. Poff and published its first issue in March 1982. It is the most frequently cited business ethics journal in the world. The Journal has always offered a multi-disciplinary and international public forum for the discussion of issues concerning the interaction of successful business and moral virtue. Its authors and readers are primarily scholars and students in social sciences and philosophy, with special interests in the interaction of these disciplines with business or corporate responsibility. Since the field of business ethics grew simultaneously with the growth of the Journal, a collection of its most cited articles is tantamount to a collection of the articles that had the greatest influence in defining the field over its first 30 years of development. In this anniversary volume, an overview of citation classics from the Journal is presented, the 33 most frequently cited articles are reproduced and brief reflections on the impact of the Journal on the field are given from over 100 scholars who authored citation classics and/or distinguished papers, as well as those who served on the Editorial Board and/or are recognized as leaders in the field.
