Why Does this Happen

Algorithmic Bill of Rights

What Is the Impact of User Control on Trust in Algorithms

Transparency

Impact of Transparency on on Trust

You Know Maybe We Show People Information about You Know Why We'Re Showing Them Certain Content but It's You Know You Have To Click through some Things To Get There It's Not You Know Explicit Right There on the on the Search Results Page for Instance so so You Know How

Would You Consider that that Kind of a Challenge Yes So I Think When We Talk about Transparency There's the Data There's the Model Then There's Inference Which Is the Things like Weights and You Know What's Important and Then There's the Interface

That Would Do Stuff for Compliance Reasons but It's all Hidden Somewhere and of Course both Transparency and Control Have Very Limited Impact if It's Hidden Behind and So I Think Transparency in the Interface Is Extremely Important I Think from a Ui Standpoint That's a Great Question I Don't Know the Answer Which Is You Know How Do You Build those Things To Make It Easy for People Even When I Said that When You Give Users Control a Lot of Research Shows Performance Goes Down So How Do You Design these Controls for Users so They Don't Know They Actually Are Able To Do Useful Things and Don't Hurt

When I Said that When You Give Users Control a Lot of Research Shows Performance Goes Down So How Do You Design these Controls for Users so They Don't Know They Actually Are Able To Do Useful Things and Don't Hurt Themselves Yeah I Worry about User Interfaces Being Regulated but but Certainly You Could Make a Compelling Case that the Regulation Can Be Very High Level Such as the Following Sets of Things Should Be Conveyed to the User but and Lots of Regulation Especially When It Comes to Privacy Do Talk about those Kinds of Things

If You Had like Gdp R Which Is the Privacy Recognition and You in You Has One Clause in There Which Is Right to Explanation in Model Decisions and if You Automate the Explanation and You Give the Explanation to a User and He and He or She Sees that One of the Factors That Resulted in Their Loan Application Being Rejected Is Their Address or Their Zip Code Then that's a Way for Them To Perhaps Recognize that Something Is Wrong and Then To Appeal and Then To Fix It So I Think Transparency Coupled with Control Is Also a Way for Users To Be Part of the Process of Detecting I Think that Was Done in a Library with a Copy Machine and the Researchers Gave Excuses as To Like Why They Need To Do Budge To Get in Line and if They Had any Excuse at all People Would Happily Let Them in but if They Just Tried To Budge like They Wouldn't Let Them in So How Much of this Is Actually like the Real Reasons and How Much Is Just People Are Happy To Have some Explanation and Then the Dropping Trust with More Information Is that either a They'Re Horrified because They Don't Understand What's Going On or Be They Can Actually See Problems
