Hospitality Marketing: an introduction takes a unique approach to outlining marketing processes in the hospitality industry. Ideal for those new to the topic of marketing, this text contextualises the subject for the hospitality sector. It discusses the eight elements of the marketing mix with direct reference to the specifics of the hospitality industry and approaches the whole process in three stages, as would the hospitality marketing manager:

- * **BEFORE** customers visit the hotel / restaurant, the marketing task is to research the market, manage customer expectations and motivate trial purchase through product / service development, pricing, location, distribution and marketing communication.
- * **DURING** the service encounter, the task is to meet or exceed customer expectation by managing the physical evidence, service processes and employee behaviour.
- * **AFTER** the service encounter, the task is to audit quality and customer satisfaction, and promote a longer term mutually beneficial relationship

with customers through relationship marketing initiative. Hospitality Marketing is a complete learning resource, with real-life examples, case studies and exercises in the text, plus an accompanying website which provides solutions to the exercises, further case studies and links to relevant sites to support both students and lecturers.

Achieving Safe Health Care

Winner of a 2016 Shingo Research and Professional Publication Award! A recent article published in the Journal of Patient Safety estimated that more than 400,000 lives are lost each year due to preventable patient events in American hospitals. Preventable patient safety events are the third leading cause of death in the United States. While most health care organizations know they need to improve patient safety, most lack an understanding of the steps required to develop and implement an effective patient safety program. Baylor Scott & White Health has successfully created a strong culture of patient safety. In 2013, Baylor Health Care System published the book *Achieving STEEEP Health Care*, which describes its quality improvement journey via the STEEEP framework of delivering care that is Safe, Timely, Effective, Efficient, Equitable, and Patient-centered. This book provides a detailed overview of the Baylor Scott & White Health approach to the delivery of safe care, the leading aim of the STEEEP quality and patient safety framework. It presents real-life examples, practical approaches, and tools for improving patient safety. The book is structured around some of the key components of patient safety such as the importance of strategic efforts in categories of culture, processes, and technology. Maintaining a focus on human factors in patient safety and health care, the book explains the need for advanced analytics along with long-term learning and corporate resources. This book describes how to develop appropriate goals, formulate strategies to meet those goals, and implement techniques to improve patient safety based on the experience of Baylor Scott & White Health.

New Horizons in Patient Safety: Safe Communication

This case studies book is an indispensable resource for educators, students, and practitioners of nursing. It is innovative in its application of lessons from the communication sciences to common challenges in the delivery of safe patient care. The authors apply basic tenets of human communication to the context of nursing to provide a foundation for practices that can advance the safety and quality of care. The cases, which describe "close calls" and adverse events, are organized along the continuum of healthcare delivery, providing quick access to solutions in commonly encountered care situations. Each case is accompanied by a discussion of how skillful communication can be key to preventing and recovering from errors and adverse events. Thought-provoking discussion questions and references for further reading make this book a valuable reference for nursing educators, students, and practitioners across the world.

Making Healthcare Safe

This unique and engaging open access title provides a compelling and ground-breaking account of the patient safety movement in the United States, told from the perspective of one of its most prominent leaders, and arguably the movement's founder, Lucian L. Leape, MD. Covering the growth of the field from the late 1980s to 2015, Dr. Leape details the developments, actors, organizations, research, and policy-making activities that marked the evolution and major advances of patient safety in this time span. In addition, and perhaps most importantly, this book not only comprehensively details how and why human and systems errors too often occur in the process of providing health care, it also promotes an in-depth understanding of the principles and practices of patient safety, including how they were influenced by today's modern safety sciences and systems theory and design. Indeed, the book emphasizes how the growing awareness of systems-design thinking and the self-education and commitment to improving patient safety, by not only Dr. Leape but a wide range of other clinicians and health executives from both the private and public sectors, all converged to drive forward the patient safety movement in the US. *Making Healthcare Safe* is divided into four parts: I. In the Beginning describes the research and theory that defined patient safety and the early initiatives to enhance it. II. Institutional Responses tells the stories of the efforts of the major organizations that began to apply the new concepts and make patient safety a reality. Most of these stories have not been

previously told, so this account becomes their histories as well. III. Getting to Work provides in-depth analyses of four key issues that cut across disciplinary lines impacting patient safety which required special attention. IV. Creating a Culture of Safety looks to the future, marshalling the best thinking about what it will take to achieve the safe care we all deserve. Captivatingly written with an "insider's" tone and a major contribution to the clinical literature, this title will be of immense value to health care professionals, to students in a range of academic disciplines, to medical trainees, to health administrators, to policymakers and even to lay readers with an interest in patient safety and in the critical quest to create safe care.

"Nurses play a vital role in improving the safety and quality of patient care -- not only in the hospital or ambulatory treatment facility, but also of community-based care and the care performed by family members. Nurses need to know what proven techniques and interventions they can use to enhance patient outcomes. To address this need, the Agency for Healthcare Research and Quality (AHRQ), with additional funding from the Robert Wood Johnson Foundation, has prepared this comprehensive, 1,400-page, handbook for nurses on patient safety and quality -- Patient Safety and Quality: An Evidence-Based Handbook for Nurses. (AHRQ Publication No. 08-0043)." - online AHRQ blurb, <http://www.ahrq.gov/qual/nursesdbk/>

This book describes a novel health interprofessional education and collaborative practice (IPECP) program established at King Saud University (KSU), Riyadh, Kingdom of Saudi Arabia. The book has three main sections. The first section introduces interprofessional education's background, theory, and context for collaborative practice. This section elaborates on defining and developing centers of excellence in IPECP, defining and exploring the meaning of interprofessional collaborative practice in contemporary health care, theories of the team working relevant to health and social care systems, and learning in and about interprofessional groups and broader collaboration. The second section explains how to formulate and implement strategies for effective IPECP. It involves developing and implementing a novel health IPECP curriculum, governance, IPECP's impact and implications on health care outcomes, IPE accreditation standards, regulatory policies, and legal structures. The third section describes the result of a case study of an IPECP program established at KSU. This program is developed by the vice-rectorship for health specialties at KSU (VRHS-KSU) in collaboration with partners Harvard Medical International (PHMI) to enhance health professional education further.

through interprofessional education and collaboration. For that purpose, a strategic plan is developed to develop learning, teaching, and assessment in all health sciences colleges (HSCs), along with a governance structure to establish a joint "center of excellence in interprofessional education and collaborative practice (CoE-IPECP)". The strategic plan and design of the program summarized in this book were accomplished through several meetings, workshops, and courses conducted at KSU in Riyadh, and Harvard Macy Institute (HMI) in Boston, USA. The toolkit for successful program implementation includes a pro forma business plan, implementation groups' training, matching needs with feasibility, and expected impact on HSCs. Initiation of pilot projects started with implementing some interprofessional courses, establishing an initial physical and IT infrastructure of the center, developing the webpage, newsletter, and listservs, and improving faculty development programs to enhance IPECP at HSCs. Also, this book is a helpful road map for other national and international universities and institutes aiming to develop their professional health education, particularly interprofessional education and collaborative practice.

In today's healthcare environment of scarce resources and challenges related to safety and quality, nurses must make decision after decision to ensure timely, accurate, and efficient provision of care. Solid decision-making, or lack thereof, can significantly affect patient care and outcomes. Clinical reasoning – how a nurse processes information and chooses what action to take – is a skill vital to nursing practice and split-second decisions. And yet, developing the clinical reasoning to make good decisions takes time, education, experience, patience, and reflection. Along the way, nurses can benefit from a successful, practical model that demystifies and advances clinical reasoning skills. In *The Essentials of Clinical Reasoning for Nurses*, authors RuthAnne Kuiper, Sandra O'Donnell, Daniel Pesut, and Stephanie Turrise provide a model that supports learning and teaching clinical reasoning, development of reflective and complex thinking, clinical supervision, and care planning through scenarios, diagnostic cues, case webs, and more.

"Handover occurs at all transitions of patient care, from handover between shifts on a ward, handover between units within a facility, or handover between different facilities during patient transfer. Recently, clinical handover has been the focus of several national and international efforts to enhance quality and influence change. Of the many types of interventions that focus on improving clinical handover, the use of technology to support handover has been an issue of increasing relevance with recent advances in health informatics... This guide is written within this context, and provides guidance to clinicians,

medical administrators, quality and safety staff, and health informatics professionals with respect to the safe use of electronic tools to support clinical handover. This guide is also designed to assist at all stages of the design and use of electronic handover systems, from the investment in a new product right through to implementation and evaluation. In short, this guide covers the main considerations for ensuring the safe use of electronic tools to support clinical handover." -- from Executive Summary.

"Essentials of Correctional Nursing is the first new and comprehensive text about this growing field to be published in the last decade. Fortunately, the editors have done a great job in all respects...This book should be required reading for all medical practitioners and administrators working in jails or prisons. It certainly belongs on the shelf of every nurse, physician, ancillary healthcare professional and corrections administrator."--Corhealth (The Newsletter of the American Correctional Health Services Association) "I highly recommend Essentials of Correctional Nursing, by Lorry Schoenly, PhD, RN, CCHP-RN and Catherine M. Knox, MN, RN, CCHP-RN, editors. This long-awaited book, dedicated to the professional specialty of correctional nursing, is not just a good read, it is one of those books that stays on your desk and may never make it to the bookshelf."--American Jails "Correctional nursing has minimal published texts to support, educate, and provide ongoing best practices in this specialty. Schoenly and Knox have successfully met those needs with Essentials of Correctional Nursing."--Journal of Correctional Health Care Nurses have been described as the backbone of correctional health care. Yet the complex challenges of caring for this disenfranchised population are many. Ethical dilemmas around issues of patient privacy and self-determination abound, and the ability to adhere to the central tenet of nursing, the concept of caring, is often compromised. Essentials of Correctional Nursing supports correctional nurses by providing a comprehensive body of current, evidence-based knowledge about the best practices to deliver optimal nursing care to this population. It describes how nurses can apply their knowledge and skills to assess the full range of health conditions presented by incarcerated individuals and determine the urgency and priority of requisite care. The book describes the unique health needs and corresponding care for juveniles, women, and individuals at the end of life. Chapters are devoted to nursing care for patients with chronic disease, infectious disease, mental illness, or pain, or who are in withdrawal from drugs or alcohol. Chapters addressing health screening, medical emergencies, sick call, and dental care describe how nurses identify, respond to, and manage these health care concerns in the correctional setting. The Essentials of Correctional Nursing was written and reviewed by experienced correctional nurses with thousands of hours of experience. American Nurses Association standards are woven throughout the text, which provide the information needed by nurses studying for certification exams in correctional nursing. The text will also be of value to nurses working in such settings as emergency departments, specialty clinics, hospitals, psychiatric treatment units, community health clinics, substance abuse treatment programs, and long-term care settings, where they may encounter patients who are currently or have previously been incarcerated. Key Features: Addresses legal and ethical issues surrounding correctional nursing Covers common inmate-patient health care concerns and diseases Discusses the unique health needs of juveniles, women, and individuals at the end of life Describes how nurses can safely navigate the correctional environment to create a therapeutic alliance with patients Provides information about health screening, medical emergencies, sick call, and dental care Serves as a core resource in the preparation for correctional nursing certification exams
