Find The ... The Pearl Girls In Shan Xia Hu. Zhejiang Province. China GIRLS

The green bottles you see in the lakes suspend the growing mollusks. This is a common sight throughout the lakes and rivers in the Zhejiang Province.

This variety of freshwater mollusks are called Triangular Oysters. They are well suited for cultured pearl production. They are tissue nucleated and left to grow and develop in the freshwater pond. During this time, water quality and management is very important. After the tissue and pearls are removed from the triangle oysters, the meat is separated and the pearls are rinsed. After the pearls are harvested, various techniques are used to polish and treat the pearls including tumbling, polishing and heating. The purpose is to maintain the integrity of the pearl while optimizing its color and luster. Pearls are then drilled and sorted according to color, size and quality. This is a multiple step process. Scenes of women and men sorting and matching pearls are very common in Shan Xia Hu.
