Excerpt from Problems in Arithmetic for Public Schools: Including the Entrance Examinations, Public School Leaving Examinations, and Primary Examinations The teacher of an ungraded school has to solve a difficult question when he comes to distribute his available time among a number of classes at all stages of progress below the Public School Leaving Examination. This little volume has been compiled to assist such teachers in economising time by setting senior pupils to teach themselves Arithmetic with a minimum of oral assistance. In view of the proposed increase in the difficulty in the Entrance and P. S. Leaving Examinations the full set of Entrance Examination Papers from the beginning furnishes the best possible preparation for ensuing examinations. Learn to pass the examination by passing the examination, is the best advice that can be given. Accordingly this collection of questions contains

a few carefully selected Review Questions, which are intended to be worked in the order in which they are given. Next follow The Entrance Papers from the beginning in 1873 to date. These papers are best utilized by taking question No. 1 through the whole set, then question No. 2 in each set, etc., for the papers are generally somewhat graded from the beginning to the end. Then follow the P. S. Leaving Papers and a few sets of like difficulty. This is the only complete collection of these papers in print. The Teachers' Edition contains answers to all the questions and Skeleton Solutions, which enable the teacher to correct his pupil's work in the shortest possible time, or enable the senior pupil to learn for himself how to solve the problem, thus leaving the teacher free to devote more time to literature, composition, reading, etc., in which subjects our schools are so generally deficient. To add to his perplexities the public school teacher in some rural sections is expected to prepare two or three pupils for the Primary Examination every year. Algebraical Exercises and Examination Papers for Public School Leaving and Primary Examinations

Summative assessment has been a contentious issue in educational circles for several decades, particularly high-stakes assessment events which arise at various junctures of the school cycle, especially those at the end of it. The French Baccalaureat and English A-Levels and their numerous clones throughout the francophone and anglophone worlds are household names and represent milestone events in people's lives, as their outcomes are principal determinants of young people's future prospects. These examinations are external--they are devised, conducted and processed by agencies outside the schools, usually ministerial examination units. As such, they act as 'blind' arbiters of student achievement, providing the proverbial 'level playing field' which ensures the comparability of outcomes. In the pyramidal school structures of yesteryear, examinations acted as filters, regulating the progression of pupils to subsequent tiers of formal education. Exit points occurred from primary school level up, from where unsuccessful candidates could enter the labour force and/or embark on occupationally specific further education and training. With the modernisation of the labour market and an ever-higher social demand for access to higher levels of formal education, the filtering function of examinations at lower levels of schooling has been gradually eroded, while burgeoning numbers of students at the upper secondary level have brought about reforms that include curricular diversification and sometimes radical overhauls of terminating assessment systems (including the modification and, in some instances, abandonment of external examinations). This edited volume brings together the experiences of twenty examination systems from around the world to show how these dynamic entities have adapted over time to the changing context of schooling. Following an introduction by Stephen P. Heyneman of World Bank repute, there are sixteen chapters presenting Country Case Studies, which have been written up under common subheadings, thereby highlighting the comparative nature of the work and facilitating cross-referencing. The subsequent four chapters elaborate on the theme of 'external examinations beyond national borders', including a contribution by the International Baccalaureate Organisation. A defining feature of the work is the attention it pays to what it calls the 'nuts and bolts' of external examinations, from question-setting to grading procedures. These are, it is argued, instrumental in nurturing and maintaining public confidence in external examinations. The book will be of immense value to people involved in educational policy studies, especially strategic educational planning, as well as those directly concerned with formal assessment. The work has been

written to appeal to a wide audience of informed persons--it is accessible to teachers and interested laypeople, as well as to academics."

Algebraical Exercises and Examination Papers for Public School Leaving and Primary Examinations (Classic Reprint)

The first book to explore the development of Singapore's much-talked-about education and examination system, this volume juxtaposes examinations with its immediate context of education and wider context of politics, economy and society. The study covers three broad historical periods: Examinations in Singapore from 1891 to 1945; The Post-War Years from 1946 to the 1970s; and Charting Our Destiny from the 1980s to 2007. In the British period up to 1941, the local examinations were conducted by the vernacular schools, and external examinations by the University of Cambridge Local Examinations Syndicate. There was a lack of systematic effort to establish a uniform system of education and examinations. During the Japanese Occupation, examinations were conducted by the Japanese authorities and, unexpectedly, the Cambridge examinations continued in the Sime Road Camp. In the post-war period and particularly after Singapore was granted self-government, the establishment of a national education system was followed by the emergence of national examinations: the Primary School Leaving Examinations and the Singapore-Cambridge GCE N/O/A Levels for every school-going child in Singapore. Thereafter, the nature of national examinations evolved with the changing needs of education and the nation. At the turn of the century, with the Ministry of Education's decision to take greater control of examinations, the Singapore Examinations and Assessment Board was established, to oversee new developments in examinations. Unlike most literature on education where

examinations are often mentioned as an outcome of educational goals and objectives, this book focuses on examinations per se. Examinations have gained a momentum of their own, and it is interesting to note the development of examinations against the backdrop of the broader history of Singapore and of education in Singapore.

Excerpt from Problems in Arithmetic for Public Schools: Including the Entrance Examinations, Public School Leaving Examinations, and Primary Examinations This plan has been fully tested in Arithmetic with great success. The questions here given without the answers furnish the matter to be investigated. If the pupil can write out full and explicit solutions he needs no help and receives none. If he fails after due trial the Skeleton Solution gives him assistance at the discretion of his teacher, or it enables the teacher to point out in a moment the vicious step in the calculation, so that time is economised and the overpressure of examination work is relieved to an appreciable extent.
