DR. APJ ABDUL KALAM TECHNICAL UNIVERSITY

Software Maintenance Changes to software product or service after delivery. • Software's evolution.

• Maintenance Phase : software performs useful work in this period.

Why Software Maintenance

Software Maintenance Agreement

Software Maintenance Process Analyze Change Request

Software Maintenance Challenges

Configuration Management: Introduction

Configuration Management output of software process is information. Information is divided into these parts.

Software Configuration Management (SCM)

SCM: Need

Management Activities :SCM

Configuration Identification

Baseline officially accepted version of a software configuration item. fixed at specific time during SCM process. Can be changed through formal change control procedures.

Change Control ensures quality & consistency retained after changes performed in configuration object. change request is submitted to software configuration manager

Configuration Status Accounting records each release during SCM. tracks for each actual version along with its respective changes.

Configuration Audits and Reviews verifies all software product satisfy baseline needs.

Responding to Tropical Deforestation

WWF conservation priorities and activities. Background on Tropical Forests. The importance of tropical forests. The value of non-wood products. The cost of deforestation. Existing areas and rates of degradation. Threats to tropical forests. WWF's position. Protected areas. Sustainable forest management. Indigenous peoples and local communities. Initiatives to save tropical forests...

Living Planet Report 2018

Tropical forests are vanishing at an alarming rate. This book, based on extensive international field research, highlights one solution for preserving this precious resource: empowering local people who depend on the forest for survival. Synthesizing a vast amount of information that has never been brought together in one place, Roger D. Stone and Claudia D'Andrea provide a clearly written and energizing tour of global efforts to empower community-based forest stewards. Along the way, they show the fundamental importance of tropical forest ecosystems and deepen our sense of urgency to save them for the benefit of billions of rural people in tropical and subtropical regions as well as for countless species of plants and animals. In their travels to research this book, the authors saw many remarkable examples of how proficient even the poorest local people can be in stabilizing and recovering formerly destitute forests. With engagingly written case studies from Thailand's Golden Triangle to Mindanao in the Philippines, from Indonesia, India, and Africa to Brazil, Mexico, and Central America, they introduce us to the communities and the individuals, the governments, the loggers, the agencies, and the local groups who vie for forest resources. Contrasting community-based efforts and traditional forest management with government and donor efforts, they discuss the many reasons why international institutions and national governments have been unable and unwilling to stem the accelerating loss of tropical forestland. This book argues we are paying a terrible price--politically, economically, and environmentally--for allowing tropical forests to be stripped. Community-based forestry is no panacea, but this book clearly shows its effectiveness as a management technique.

Forests for Life

This comprehensive handbook provides a unique resource covering all aspects of forest ecology from a global perspective. It covers both natural and managed forests, from boreal, temperate, sub-tropical and tropical regions of the world. The book is divided into seven parts, addressing the following themes: forest types forest dynamics forest flora and fauna energy and nutrients forest conservation and management forests and climate change human impacts on forest ecology. While each chapter can stand alone as a suitable resource for a lecture or seminar, the complete book provides an essential reference text for a wide range of students of ecology, environmental science, forestry, geography and natural resource management. Contributors include leading authorities from all parts of the world.

Tropical Forest Conservation

This book critically engages with how the conservation of tropical rainforests is financed. Beginning with the context of tropical deforestation, alongside an overview of tropical ecology, global environmental policy and finance, the book reviews several conservation financing instruments. These include eco-tourism and private reserves, debt-for-nature swaps and government domestic budgetary expenditures for state and national parks. Tropical deforestation and forest degradation are serious global environmental issues, contributing to global climate change, species extinction, and threatening the livelihoods of forest-dependent communities. Yet, many leading companies, individuals and governments are making a positive impact on tropical forest conservation to mitigate greenhouse gas emissions through the use of conservation finance. Conservation of Tropical Rainforests tells the history of international conservation finance and provides a variety of options for individuals, businesses, and governments to support conservation financing projects.

Tropical Forests and the Human Spirit

This book, published in cooperation with WWF International, integrates the restoration of forest functions into landscape conservation plans. The contents represent the collective body of knowledge and experience of WWF and its many partners - collected here for the first time. This guide will serve as

a first stop for practitioners and researchers in many organizations and regions, and as a key reference on the subject.

Routledge Handbook of Forest Ecology

In 2007, the Intergovernmental Panel on Climate Change shared the 2007 Nobel Peace Prize (with former Vice President Al Gore) for its reporting on the human causes of climate change. In 2008, the National Council for Science and the Environment reported that the acceleration of climate change is already faster than the IPCC projected only a year earlier. How we deal with the rapid environmental changes, and the human forces that are driving these changes, will be among the defining issues of our generation. *Climate Solutions Consensus* presents an agenda for America. It is the first major consensus statement by the nation's leading scientists, and it provides specific recommendations for federal policies, for state and local governments, for businesses, and for colleges and universities that are preparing future generations who will be dealing with a radically changed climate. The book draws upon the recommendations developed by more than 1200 scientists, educators and decision makers who participated in the National Council for Science and the Environment's 8th National Conference on Science, Policy and the Environment. After presenting a lucid narrative of the science behind climate change and its solutions, *Climate Solutions Consensus* presents 35 practical, results-oriented approaches for minimizing climate change and its impacts. It clearly spells out options for technological, societal, and policy actions. And it deals head-on with controversial topics, including nuclear energy, ocean fertilization and atmospheric geo-engineering. One of the book's key conclusions is that climate solutions are about much more than energy sources. They involve re-examining everything people do with an eye toward minimizing climate impacts. This includes our eating habits, consumption patterns, transportation, building and housing, forestry, land use, education, and more. According to these scientists, the time to act is now. With clarity and urgency, they tell us exactly what needs to be done to start reversing the driving factors behind climate change, minimizing their consequences, and adapting to what is beyond our power to stop.

Conservation of Tropical Rainforests

Restoration ecology, as a scientific discipline, developed from practitioners' efforts to restore degraded land, with interest also coming from applied ecologists attracted by the potential for restoration projects to apply and/or test developing theories on ecosystem development. Since then, forest landscape restoration (FLR) has emerged as a practical approach to forest restoration particularly in developing countries, where an approach which is both large-scale and focuses on meeting human needs is required. Yet despite increased investigation into both the biological and social aspects of FLR, there has so far been little success in systematically integrating these two complementary strands. Bringing experts in landscape studies, natural resource management and forest restoration, together with those experienced in conflict management, environmental economics and urban studies, this book bridges that gap to define the nature and potential of FLR as a truly multidisciplinary approach to a global environmental problem. The book will provide a valuable reference to graduate students and researchers interested in ecological restoration, forest ecology and management, as well as to professionals in environmental restoration, natural resource management, conservation, and environmental policy.

Forest Restoration in Landscapes

In 1972, *The Limits to Growth* introduced the idea that world resources are limited. Soon after, people became aware of the threats to the world's rainforests, the biggest terrestrial repositories of biodiversity and essential regulators of global air and water cycles. Since that time, new research and technological advances have greatly increased our knowledge of how rainforests are being affected by changing patterns of resource use. Increasing concern about climate change has made it more important than ever to understand the state of the world's tropical forests. This book provides an up-to-date picture of the health of the world's tropical forests. Claude Martin, an eminent scientist and conservationist, integrates information from remote imaging, ecology, and economics to explain deforestation and forest health throughout the world. He explains how urbanization, an increasingly global economy, and a worldwide demand for biofuels put new pressure on rainforest land. He examines the policies and market forces that have successfully preserved forests in some areas and discusses the economic benefits of protected areas. Using evidence from ice core records and past forest cover patterns, he predicts the most likely effects of climate change. Claude Martin brings his wealth of experience as an

ecologist, director of the WWF, and advisor to various conservation organizations to bear on the latest research from around the world. Contributions from eight leading experts provide additional insight.

The Climate Solutions Consensus

The zero-deforestation movement has gained considerable momentum as governments and companies enter into commitments to curb deforestation. The most innovative are multi-stakeholder initiatives, where governments and international organizations have joined with the private sector and civil society organizations in making commitments to reduce deforestation. These pledges have created opportunities for improved forest governance by envisaging the private sector at the centre of the movement. They have also encouraged a broader understanding of the drivers and consequences of deforestation, and how these can be more realistically addressed.

Natural Solutions

'An important and timely book' from the Foreword by Stanley Johnson 'A complete and absorbing history of a decade of intense international politics offers many insights for future negotiators of sustainable solutions' Stephen Bass, International Institute for Environment and Development 'Skillfully navigates the jungle of forest politics, leaving us in no doubt that the verbal commitment to save the world's forests has yet to be translated into action on the ground. The way forward must clearly lie in political commitments and international cooperation if forests are to continue to preserve life on Earth' Francis Sullivan, World Wide Fund for Nature Global deforestation and its attendant processes - including soil degradation, climate change and the loss of biological diversity - emerged as international political issues during the 1980s, prompting politicians to seek consensus on programmes and policies for the conservation and sustainable management of forests. Yet global initiatives have been bedevilled by tensions between the North and South and between governments, industry, local communities and indigenous peoples. Meanwhile, rates of deforestation in the tropics are increasing, and international political efforts are demonstrably failing. *Forest Politics* carefully traces the evolution of international cooperation on forests, from the inception of the controversial International Tropical Timber Organization and the failed Tropical Forestry Action Programme in the mid-1980s, to the creation of the Intergovernmental Panel on Forests in the mid-1990s. The book also provides a detailed analysis of the negotiating stances of the parties involved in the divisive negotiations that took place prior to the 1992 'Earth Summit' in Rio de Janeiro and the equally factious negotiations for the International Tropical Timber Agreement of 1994. It provides a fascinating insight into the nature of such processes, illustrating the difficulties that arise when concepts such as 'global commons' come into conflict with national sovereignty. Complete with annexes of important political documents, and making extensive use of primary source material and interviews with participants. *Forest Politics* presents case studies of all the major forest negotiations over the last 13 years. It is an essential reference point for policy makers, environmental campaigners and students, and required reading for all those who care about the future of the world's forests. David Humphreys is Research Fellow in Global Environmental Change at the Open University. Originally published in 1996

Forest Landscape Restoration

This timely book contributes to discussions on the best legal practices to use to promote conservation, protection and sustainable use of biological diversity in forest and marine areas. The breadth of issues explored across these two themes is immense, and the book identifies both key differences, and striking commonalities between them.

On the Edge

First Published in 1995. Routledge is an imprint of Taylor & Francis, an informa company.

Zero-deforestation commitments: A new avenue towards enhanced forest governance?

At last a really useful book telling us how all the rhetoric about ecosystem approaches and sustainable forest management is being translated into practical solutions on the ground CLAUDE MARTIN, WWF INTERNATIONAL For too long, foresters have seen forests as logs waiting to be turned into something useful. This book demonstrates that forests in fact have multiple values, and managing them as ecosystems will bring more benefits to a greater cross-section of the public JEFFREY A. MCNEELY, CHIEF SCIENTIST, IUCN This book demonstrates that [ecosystem approaches and sustainable forest

management] are neither alternative methods of forest management nor are they simply complicated ways of saying the same thing. They are both emerging concepts for more integrated and holistic ways of managing forests within larger landscapes in ways that optimize benefits to all stakeholders

ACHIM STEINER AND IAN JOHNSON, FROM THE FOREWORD

Recent innovations in Sustainable Forest Management and Ecosystem Approaches are resulting in forests increasingly being managed as part of the broader social-ecological systems in which they exist. Forests in Landscapes reviews changes that have occurred in forest management in recent decades. Case studies from Europe, Canada, the United States, Russia, Australia, the Congo and Central America provide a wealth of international examples of innovative practices. Cross-cutting chapters examine the political ecology and economics of forest management, and review the information needs and the use and misuse of criteria and indicators to achieve broad societal goals for forests. A concluding chapter draws out the key lessons of changes in forest management in recent decades and sets out some thoughts for the future. This book is a must-read for practitioners, researchers and policy makers concerned with forests and land use. It contains lessons for all those concerned with forests as sources of people's livelihoods and as part of rural landscapes. Published with IUCN and PROFOR

Forest Politics

This research critically examines implementation gaps and externality problems associated with the recent proliferation of zero deforestation commitments (ZDC) by large commodity producers. By developing and employing a hierarchical framework, we evaluate

Protecting Forest and Marine Biodiversity

This paper presents a broad overview of payments for environmental services (PES) experiences in Cambodia. First, we explore the legal and policy environment for PES, including its promotion by international donors and nongovernmental organizations (NGOs), and its uptake by government actors. This reveals a long-standing uncertainty over whether the government is willing to support PES, and a lack of clarity about what PES actually represents in practice. Second, taking a broad definition of PES, we examine the full range of payments-based schemes for conservation currently operating in Cambodia. These include community-based conservation agreements, direct payments for biodiversity conservation, PES schemes in the context of hydropower, and REDD+ schemes in the context of climate change mitigation. Overall, these payment schemes demonstrate mixed environmental and social effects; and they face a range of technical and practical challenges, relating to the governance context of Cambodia and difficulties in securing any 'willingness to pay' for environmental services beyond donor-funded schemes. More profoundly, these findings illustrate that 'environmental services markets' do not naturally come into being; but instead require a lot of political and discursive work, institution-building, and donor funding to become established. For this reason, we see PES succeeding only in isolated cases, with dedicated NGO-backing and the presence of niche markets. Beyond that, we observe significant challenges for PES and REDD+ in Cambodia, relating mainly to the apparent 'state capture' of these mechanisms. Such an outcome risks the erosion of conservation and local livelihood objectives that international donors and buyers of environmental services are seeking. It also presents the ethical problem of PES and REDD+ being absorbed into the Cambodian regime simply as adjuncts to the status quo.

Bad Harvest?

The publication features a range of articles that encourage the sharing of best practice and the development of new technologies and initiatives and illustrates the opportunities for business and governments to reduce costs and increase profits while tackling climate change. This second edition of Climate Action is focused on three themes: Mitigation and Adaptation, Technology, and Finance. It also describes positive actions organizations can take to reduce their carbon footprint and thereby their costs. Some of these actions require little investment in time or money, while others require substantial time and capital. But what they all require is a commitment to succeed.

Forests in Landscapes

REDD+ is one of the leading near-term options for global climate change mitigation. More than 300 subnational REDD+ initiatives have been launched across the tropics, responding to both the call for demonstration activities in the Bali Action Plan and the market for voluntary carbon offset credits.

Forests in Trouble

Acting in a socially-responsible manner has become a crucial success factor for many international firms due to the highly complex, competitive, and volatile global environment in which they operate. This book will contribute new ideas, contemporary knowledge, and original research to the area of socially-responsible international business, and offers challenging directions for future research. Topic covered range from global environmental influences on acting in a socially-responsible way; foreign buyer reactions to responsible business and international market targeting to development of socially-responsible international business strategies.

Tropical Forest Conservation and Climate Change

The Government of Norway, through its International Climate and Forest Initiative, will allocate up to NOK3 billion (approximately US \$430 million) a year between 2009 and 2012 to mitigate greenhouse gases produced by land-use change. An assessment of the utility of payments for ecosystem services as a tool for REDD was commissioned by the Norwegian Minister for the Environment and International Development to inform the International Climate and Forest Initiative. This document represents a summary of ten papers which made up the assessment."--Résumé de l'éditeur.

The Management of Natural Coastal Carbon Sinks

It was hoped that by paying forest dependent peoples and countries for their "service" of conserving their forests, REDD+ would lead to a reduction in deforestation greenhouse gases. The complexities have, however, left some ambiguities. It was never agreed who would pay for the program, and it has been criticized as ignoring the root causes of forest loss. Considering the motivations of those who promoted REDD+ this book proposes remedies to its shortfalls and recommends more efficient, equitable and effective conservation policies.

Corporate commitments to zero deforestation

Large areas of the world's forests have been lost or degraded and landscapes everywhere are being simplified by current land-use practices. In this publication, Lamb and Gilmour present approaches to restoring and rehabilitating the vast areas of degraded, fragmented and modified forests which cover much of the world. They argue that by applying best practice at the site level it is possible to enhance socio-economic and ecological gains at the landscape level. This book provides an important contribution towards the objectives of the Forest Landscape Restoration approach and is essential reading for practitioners and decision makers involved in forest restoration.

A Review of payments for environmental services (PES) experiences in Cambodia

In the eastern Himalayan Kingdom of Bhutan, culture, society, economy and environment are linked in the development framework of Gross National Happiness (GNH). In this literature review, we highlight the relationships between forests and Bhutan's development framework and current priorities, identifying plausible causal pathways. Due to the mountainous nature of this country, our particular interest is in the impacts of upstream forest activity on downstream stakeholders. Our hypothetical framework identifies specific causal pathways between forests and the four pillars of GNH (environmental conservation, cultural preservation, equitable socioeconomic development and good governance), and evidence was sought in the published literature to test the hypothesis. While conceptual support for many linkages between forests and each of the pillars was found in the literature, evidential support specifically for Bhutan is limited. The strongest evidence is found for the role of forests in socioeconomic development and good governance, particularly through the community forestry program. To develop incentive programs for forest conservation and restoration, such as payment for ecosystem services and pay-for-performance donor funding, the evidence base needs to be expanded for causal pathways between upstream forest condition and downstream security, particularly for services such as water regulation. The evidence should inform public policy and forest management strategies and practices.

Climate Action

There are very serious environmental problems facing the planet. Biodiversity loss has reached unprecedented levels. Climate change is progressing so rapidly that within this century we are likely to see substantial sea level rise. There has been dramatic loss of tropical rainforests. Plastic pollution is killing wildlife and polluting our oceans. Various movements old and new are addressing these green

issues. Civil society activism has taken on new strategies with the emergence of new technologies and global networks of green activists have formed. A new generation of green activists are emerging and boldly criticizing the status quo. At the same time, in some parts of the world, green movements that looked like they were beginning to gain a political foothold or were even doing quite well are in retreat. The reasons are complex. Some suffer from lack of funding and hostile political and legal environments. Others are being attacked by populist politicians who see green activism as a threat. The second edition of Historical Dictionary of the Green Movement contains a chronology, an introduction, and an extensive bibliography. The dictionary section has over 300 cross-referenced on green movements, green politics, green trends, and major environmental agreements and events. This book is an excellent resource for students, researchers, and anyone wanting to know more about the green movement.

Rights-based Approaches

Explores the causes of current environmental problems, particularly on our rain forests, and discusses new trends, technology, and new solutions.

Estrategia mundial para la conservación

The No.1 Magazine for IAS Aspirants Since 1990

Taking stock of Nature-Based Solutions (NBS): An analysis of global NBS submissions to the United Nations Climate Action Summit in September 2019

Despite carefully constructed conservation interventions, deforestation in Indonesia is not being stopped. This book identifies why large-scale international forest conservation has failed to reduce deforestation in Indonesia and considers why key stakeholders have not responded as expected to these conservation interventions. The book maps the history of deforestation in Indonesia in the context of global political economy, exploring the relationship between international trade, the interests and ideology behind global sustainability programmes and the failures of forest conservation in Indonesia. Global economic and political ideologies are shown to have profoundly shaped deforestation. The author argues that the same forces continue to prevent positive outcomes. Case study chapters analyse three major international programmes: Reducing Emissions from Deforestation and Forest Degradation (REDD+), the Norway-Indonesia bilateral partnership, and the Roundtable on Sustainable Palm Oil (RSPO) in Indonesia. The findings provide insight into the failures of global climate change policy and suggest how the book's theoretical model can be used to analyse other complex environmental problems. The book is a useful reference for students of environmental science and policy, political theory, international relations, development and economics. It will also be of interest to forestry professionals and practitioners working in NGOs.

REDD+ on the ground

International Deforestation and Climate Change
