DRUG-DRUG INTERACTIONS ARISING FROM CHANGES IN METABOLISM & TRANSPORT

Mechanistic • Enzymes and transporters behave predictably-transition from studying specific generalize the interaction potential with a much broader list of drugs • Significant step forward in improving drug safety • Additional payoff to sponsors is the potential to eliminate some clinical DDI trials •

Qualitative estimations - Decision trees - Physiologically based Pharmacokinetic Modeling (PPK) •

Quantitative estimations

LEVERAGING PHYSIOLOGICALLY-BASED PHARMACOKINETIC MODELING (PBPK) MODEL-

ING . Qualitative estimations . Quantitative estimations - Rare diseases - Oncology - Patient sub-populations (special populations and those with genetic variants)

WHEN SHOULD DDI INVESTIGATION START? MHLW "Information on the investigational drug's... drug metabolism should normally be clarified from in vitro studies before starting phase I studies." if the major elimination pathway of an investigational drug is metabolism drug metabolizing enzymes contributing highly should be identified and the

WHICH SPECIES? EMA: "Pharmacokinetic interaction studies should generally be performed in humans. Preclinical studies in animals may sometimes be relevant, but due to marked species differences, direct extrapolation of such results to humans is difficult...therefore...in vivo...means in humans...in vitro studies should be performed using human enzymes and transporters" MHLW: "quantitatively evaluate the effect of the precipitant drug on the object drug's main elimination pathways... This is achieved by first conducting in vitro studies using human tissues and drug-metabolizing enzymes"

WHEN CAN IN VITRO DATA BE UTILIZED IN LIEU OF A CLINICAL STUDY? - Robust in vitro data conducted utilizing human tissue - Qualitative - Quantitative . Good understanding of the relevant clinical PK of investigational drug including worst case scenario

GENERAL DESIGN PRINCIPLES FOR CLINICAL DDI STUDIES • Evaluating an investigational drug as a potential substrate (victim) - Need a dosage within the linear PK range highest dosage in this range not - Potentially can utilize a single dose

WHICH TRANSPORTERS SHOULD BE EVALUATED? For metabolically stable drugs with poor permeability: role of transports is paramount (-) Few index (probe) drugs - redundancy for both substrates and inhibitors (ex. OATP1B1 & OATP1B3) (-) Complex metabolic-transporter interplay - Extended Clearance Classification System (-) Systemic (plasma) concentrations may not reflect the intracellular concentrations at the site of action

SMALL DOSE (MICRODOSING*) DDI STUDIES . Study design to minimize potential safety issues for participants - Pediatric populations - Targeted oncology agents - May be better suited for healthy volunteer studies not be appropriate for
