With photos, experiments, and more, this “appealing and highly informative” science book from the beloved TV host is “a winner” (School Library Journal). Science educator, TV host, and New York Times–bestselling author Bill Nye is on a mission to help young people understand and appreciate the science that makes our world work. Featuring a range of subjects—physics, chemistry, geology, biology, astronomy, global warming, and more—this profusely illustrated book covers the basic principles of each science, key discoveries, recent revolutionary advances, and the problems that science still needs to solve for our Earth. Nye and coauthor Gregory Mone present the most difficult theories and facts in an easy-to-comprehend, humorous way. They interviewed numerous specialists from around the world, in each of the fields discussed, whose insights are included throughout. Also included are experiments kids can do themselves to bring science to life! “Wordplay and wry wit put extra fun into a trove of fundamental knowledge.” —Kirkus Reviews (starred review) Includes photographs, illustrations, diagrams, glossary, bibliography, and index

Bill Nye's Great Big World of Science

“Evolution is one of the most powerful and important ideas ever developed in the history of science. Every question it raises leads to new answers, new discoveries, and new smarter questions. The science of evolution is as expansive as nature itself. It is also the most meaningful creation story that humans have ever found.”—Bill Nye Sparked by a controversial debate in February 2014, Bill Nye has set off on an energetic campaign to spread awareness of evolution and the powerful way it shapes our lives. In *Undeniable: Evolution and the Science of Creation*, he explains why race does not really exist; evaluates the true promise and peril of genetically modified food; reveals how new species are born, in a dog kennel and in a London subway; takes a stroll through 4.5 billion years of time; and explores the new search for alien life, including aliens right here on Earth. With infectious enthusiasm, Bill Nye shows that evolution is much more than a rebuttal to creationism; it is an essential way to understand how nature works—and to change the world. It might also help you get a date on a Saturday night.

Who's Who in Science and Engineering 2008-2009

Just as World War II called an earlier generation to greatness, so the climate crisis is calling today's rising youth to action: to create a better future. In UNSTOPPABLE, Bill Nye crystallizes and expands the message for which he is best known and beloved. That message is that with a combination of optimism and scientific curiosity, all obstacles become opportunities, and the possibilities of our world become limitless. With a scientist's thirst for knowledge and an engineer's vision of what can be, Bill Nye sees today's environmental issues not as insurmountable, depressing problems but as chances for our society to rise to the challenge and create a cleaner, healthier, smarter world. We need not accept that transportation consumes half our energy, and that two-thirds of the energy you put into your car is immediately thrown away out the tailpipe. We need not accept that dangerous emissions are the price we must pay for a vibrant economy and a comfortable life. Above all, we need not accept that we will leave our children a planet that is dirty, overheated, and depleted of resources. As Bill shares his vision, he debunks some of the most persistent myths and misunderstandings about global warming. When you are done reading, you'll be enlightened and empowered. Chances are, you'll be smiling, too, ready to join Bill and change the world. In Unstoppable: Harnessing Science to Change the World, the New York Times bestselling author of Undeniable: Evolution and the Science of Creation and former host of "Bill Nye the Science Guy" issues a new challenge to today's generation: to make a cleaner, more efficient, and happier world. Praise for UNDENIABLE: "With his charming, breezy, narrative style, Bill empowers the reader to see the natural world as it is, not as some would wish it to be. He does it right. And, as I expected, he does it best." -Neil deGrasse Tyson, Ph.D, host of COSMOS "Bill Nye, 'the Science Guy,' has become a veritable cultural icon....[T]he title of his new book on evolution...[is] 'Undeniable,' because, yes, there are many Americans who still deny what Darwin and other scientists long ago proved." -Frank Bruni, The New York Times "With a jaunty bow tie and boyish enthusiasm, Bill Nye the Science Guy has spent decades decoding scientific topics, from germs to volcanoes, for television audiences....In his new book, Nye delights in how [evolution] helps to unlock the mysteries of everything from bumblebees to human origins to our place in the universe." -National Geographic "When it comes to Bill Nye, 'Science Guy' doesn't even begin to cover it. When he's not being summoned to act as a voice of reason for news outlets or leading meetings as CEO of the Planetary Society, he is living the life of a best-selling author....His recently published book, 'Undeniable: Evolution and the Science of Creation,' enlightens readers while using a conversational, educational tone. After all, it's his ability to break down even the most complicated topics into bite-size pieces that made him such a hit on his '90s children's show 'Bill Nye, the Science Guy.'" -The Boston Globe "Mr. Nye writes briskly and accessibly...[and] makes an eloquent case for evolution." -The Wall Street Journal "Because [Bill Nye is] a scientist, he has no doubts that the 'deniers' of evolution are flat wrong. And because he's a performer, his book is fun to read and easy to absorb." -The Washington Post "Ignite your inner scientist when Nye, known for delivering geeky intel with clarity and charm, takes on one of society's most hotly debated topics (yes, still)." -Time Out New York

Energy, Entropy, Atoms, and Quantum Mechanics form the very foundation of our universe. But how do they govern the world we live in? What was the difficult path to their discovery? Who were the key players that struggled to shape our current understanding? "The Cosmic Machine" takes you from the earliest scientific inquiries in human history on an exciting journey in search of the answers to these questions. In telling this fascinating story of science, the author Scott Bembenek masterfully guides you through the wonderment of how scientific discoveries (and the key players of those discoveries) shaped the world as we know it today. With its unique blend of science, history, and biographies, "The Cosmic Machine" provides an easily accessible account without sacrificing the actual science itself. Not only will this book engage, enlighten, and entertain you, it will inspire your passion and curiosity for the world around us.

Named A Best Book of the Year by World Magazine Throughout his distinguished and unconventional career, engineer-turned-molecular-biologist Douglas Axe has been asking the questions that much of the scientific community would rather silence. Now, he presents his conclusions in this brave and pioneering book. Axe argues that the key to understanding our origin is the “design intuition”—the innate belief held by all humans that tasks we would need knowledge to accomplish can only be accomplished by someone who has that knowledge. For the ingenious task of inventing life, this knower can only be God. Starting with the hallowed halls of academic science, Axe dismantles the widespread belief that Darwin’s theory of evolution is indisputably true, showing instead that a gaping hole has been at its center from the beginning. He then explains in plain English the science that proves our design intuition scientifically valid. Lastly, he uses everyday experience to empower ordinary people to defend their design intuition, giving them the confidence and courage to explain why it has to be true and the vision to imagine what biology will become when people stand up for this truth. Armed with that confidence, readers will affirm what once seemed obvious to all of us—that living creatures, from single-celled cyanobacteria to orca whales and human beings, are brilliantly conceived, utterly beyond the reach of accident. Our intuition was right all along.

'A fantastic compendium of skeptical thinking and the perfect primer for anyone who wants to separate fact from fiction.' Richard Wiseman, author *59 Seconds* 'Thorough, informative, and enlightening... If this book does not become required reading for us all, we may well see modern civilization unravel before our eyes.' Neil deGrasse Tyson, author of *Astrophysics for People in a Hurry* In this tie-in to their popular 'The Skeptics Guide to the Universe' podcast, Steven Novella, along with 'Skeptical Rogues' Bob Novella, Cara Santa Maria, Jay Novella and Evan Bernstein explain the tenets of skeptical thinking and debunk some of the biggest scientific myths, fallacies and conspiracy theories (anti-vaccines, homeopathy, UFO sightings, and many more.) They'll help us try to make sense of what seems like an increasingly crazy world using powerful tools like science and philosophy. *The Skeptics' Guide to the Universe* is your guide through this maze of modern life. It covers essential critical thinking skills, as well as giving insight into how your brain works and how to avoid common pitfalls in thinking. They discuss the difference between science and pseudoscience, how to recognize common science news tropes, how to discuss conspiracy theories with that crazy colleague of yours, and how to apply all of this to everyday life. As fascinating as it is entertaining, this page turner is your essential guide to seeing through the fake news and media manipulation in our increasingly confusing world.

The Cosmic Machine

How insurgencies—enabled by digital devices and a vast information sphere—have mobilized millions of ordinary people around the world. In the words of economist and scholar Arnold Kling, Martin Gurri saw it coming. Technology has categorically reversed the information balance of power between the public and the elites who manage the great hierarchical institutions of the industrial age: government, political parties, the media. *The Revolt of the Public* tells the story of how insurgencies, enabled by digital devices and a vast information sphere, have mobilized millions of ordinary people around the world. Originally published in 2014, *The Revolt of the Public* is now available in an updated edition, which includes an extensive analysis of Donald Trump’s improbable rise to the presidency and the electoral triumphs of Brexit. The book concludes with a speculative look forward, pondering whether the current elite class can bring about a reformation of the democratic process and whether new organizing principles, adapted to a digital world, can arise out of the present political turbulence.

Life

Why is life the way it is? Bacteria evolved into complex life just once in four billion years of life on earth-and all complex life shares many strange properties, from sex to ageing and death. If life evolved on other planets, would it be the same or completely different? In *The Vital Question*, Nick Lane radically reframes evolutionary history, putting forward a cogent solution to conundrums that have troubled scientists for decades. The answer, he argues, lies in energy: how all life on Earth lives off a voltage with the strength of a bolt of lightning. In unravelling these scientific enigmas, making sense of life's quirks, Lane's explanation provides a solution to life's vital questions: why are we as we are, and why are we here at all? This is ground-breaking science in an accessible form, in the tradition of Charles Darwin's *The Origin of Species*, Richard Dawkins' *The Selfish Gene*, and Jared Diamond's *Guns, Germs and Steel*.

The British National Bibliography

In the New York Times bestseller *Everything All at Once*, Bill Nye shows you how thinking like a nerd is the key to changing yourself and the world around you. Everyone has an inner nerd just waiting to be awakened by the right passion. In *Everything All at Once*, Bill Nye will help you find yours. With his call to arms, he wants you to examine every detail of the most difficult problems that look unsolvable—that is, until you find the solution. Bill shows you how to develop critical thinking skills and create change, using his “everything all at once” approach that leaves no stone unturned. Whether addressing climate change, the future of our society as a whole, or personal success, or stripping away the mystery of fire walking, there are certain strategies that get results: looking at the world with relentless curiosity, being driven by a desire for a better future, and being willing to take the actions needed to make change happen. He shares how he came to create this approach—starting with his Boy Scout training (it turns out that a practical understanding of science and engineering is immensely helpful in a capsizing canoe) and moving through the lessons he learned as a full-time engineer at Boeing, a stand-up comedian, CEO of The Planetary Society, and, of course, as Bill Nye The Science Guy. This is the story of how Bill Nye became Bill Nye and how he became a champion of change and an advocate of science. It’s how he became The Science Guy. Bill teaches us that we have the power to make real change. Join him in... dare we say it... changing the world.

“Delivers an enthusiastic introduction to nutritional epidemiology . . . Using simple illustrations and his trademark humor to demystify scientific analysis that doesn’t always prove cause and effect, Zaidan empowers readers to make their own dietary decisions.” —Shelf Awareness, starred review
Cheese puffs. Coffee. Sunscreen. Vapes. George Zaidan reveals what will kill you, what won’t, and why—explained with high-octane hilarity, hysterical hijinks, and other things that don’t begin with the letter H. *INGREDIENTS* offers the perspective of a chemist on the stuff we eat, drink, inhale, and smear on ourselves. Apart from the burning question of whether you should eat those Cheetos, Zaidan explores a range of topics. Here’s a helpful guide: Stuff in this book: - How bad is processed food? How sure are we? - Is sunscreen safe? Should you use it? - Is coffee good or bad for you? - What’s your disease horoscope? - What is that public pool smell made of? - What happens when you overdose on fentanyl in the sun? - What do cassava plants and Soviet spies have in common? - When will you die? Stuff in other books: - Your carbon footprint - Food sustainability - GMOs - CEO pay - Science funding - Politics - Football - Baseball - Any kind of ball, really Zaidan, an MIT-trained chemist who cohosted CNBC’s hit *Make Me a Millionaire Inventor* and wrote and voiced several TED-Ed viral videos, makes chemistry more fun than Hogwarts as he reveals exactly what science can (and can’t) tell us about the packaged ingredients sold to us every day. Sugar, spinach, formaldehyde, cyanide, the ingredients of life and death, and how we know if something is good or bad for us—as well as the genius of aphids and their butts—are all discussed in exquisite detail at breakneck speed.

Officers were approached by the enemy with from one hundred to one thousand pounds if they would accept and use their influence to effect a reconciliation; but, with blazing eye and unfaltering attitude, each stated that he was not for sale, and returned to his frozen mud-hole to rest and dream of food and freedom. Those were the untitled nobility from whom we sprung. Let us look over our personal record and see if we are living lives that are worthy of such heroic sires. Five minutes will now be given the reader to make a careful examination of his personal record. In the spring the joyful news came across the sea that, through the efforts of Benjamin Franklin, France had acknowledged the independence of the United States, and a fleet was on the way to assist the struggling troops. The battle of Monmouth occurred June 28. Clinton succeeded Howe, and, alarmed by the news of the French fleet, the government ordered Clinton to concentrate his troops near New York, where there were better facilities for getting home. Washington followed the enemy across New Jersey, overtaking them at Monmouth. Lee was in command, and got his men tangled in a swamp where the mosquitoes were quite plenty, and, losing courage, ordered a retreat. Washington arrived at that moment, and bitterly upbraided Lee. He used the Flanders method of upbraiding, it is said, and Lee could not stand it. He started towards the enemy in preference to being there with Washington, who was still rebuking him. The fight was renewed, and all day long they fought. When night came, Clinton took his troops with him and went away where they could be by themse...

The New York Times bestselling author of Darwin's Doubt presents groundbreaking scientific evidence of the existence of God, based on breakthroughs in physics, cosmology, and biology. Beginning in the late 19th century, many intellectuals began to insist that scientific knowledge conflicts with traditional theistic belief—that science and belief in God are “at war.” Philosopher of science Stephen Meyer challenges this view by examining three scientific discoveries with decidedly theistic implications. Building on the case for the intelligent design of life that he developed in *Signature in the Cell* and *Darwin's Doubt*, Meyer demonstrates how discoveries in cosmology and physics coupled with those in biology help to establish the identity of the designing intelligence behind life and the universe. Meyer argues that theism—with its affirmation of a transcendent, intelligent and active creator—best explains the evidence we have concerning biological and cosmological origins. Previously Meyer refrained from attempting to answer questions about “who” might have designed life. Now he provides an evidence-based answer to perhaps the ultimate mystery of the universe. In so doing, he reveals a stunning conclusion: the data support not just the existence of an intelligent designer of some kind—but the existence of a personal God.

The Skeptics' Guide to the Universe

****Kirkus Best Books of the Year (2013)**** From one of our finest and most popular science writers, and the best-selling author of *Your Inner Fish*, comes the answer to a scientific mystery as big as the world itself: How are the events that formed our solar system billions of years ago embedded inside each of us? In *Your Inner Fish*, Neil Shubin delved into the amazing connections between human bodies—our hands, heads, and jaws—and the structures in fish and worms that lived hundreds of millions of years ago. In *The Universe Within*, with his trademark clarity and exuberance, Shubin takes an even more expansive approach to the question of why we look the way we do. Starting once again with fossils, he turns his gaze skyward, showing us how the entirety of the universe's fourteen-billion-year history can be seen in our bodies. As he moves from our very molecular composition (a result of stellar events at the origin of our solar system) through the workings of our eyes, Shubin makes clear how the evolution of the cosmos has profoundly marked our own bodies. This publication presents cleaning and etching solutions, their applications, and results on inorganic materials. It is a comprehensive collection of etching and cleaning solutions in a single source. Chemical formulas are presented in one of three standard formats - general, electrolytic or ionized gas formats - to insure inclusion of all necessary operational data as shown in references that accompany each numbered formula. The book describes other applications of specific solutions, including their use on other metals or metallic compounds. Physical properties, association of natural and man-made minerals, and materials are shown in relationship to crystal structure, special processing techniques and solid state devices and assemblies fabricated. This publication also presents a number of organic materials which are widely used in handling and general processing...waxes, plastics, and lacquers for example. It is useful to individuals involved in study, development, and processing of metals and metallic compounds. It is invaluable for readers from the college level to industrial R & D and full-scale device fabrication, testing and sales. Scientific disciplines, work areas and individuals with great interest include: chemistry, physics, metallurgy, geology, solid state, ceramic and glass, research libraries, individuals dealing with chemical processing of inorganic materials, societies and schools.

Forests and Sea Power

Dick Popkin and James Force have attended a number of recent conferences where it was apparent that much new and important research was being done in the fields of interpreting Newton's and Spinoza's contributions as biblical scholars and of the relationship between their biblical scholarship and other aspects of their particular philosophies. This collection represents the best current research in this area. It stands alone as the only work to bring together the best current work on these topics. Its primary audience is specialised scholars of the thought of Newton and Spinoza as well as historians of the philosophical ideas of the late seventeenth and early eighteenth centuries.

The Books of Nature and Scripture

"[A] most impressive achievement by an extraordinarily intelligent, courageous, and—that goes without saying—'well-read' mind. The scope of this work is enormous: it provides no less than a comprehensive, historically grounded theory of 'modern peoplehood,' which is Lie's felicitous umbrella term for everything that goes under the names 'race,' 'ethnicity,' and 'nationality.'" Christian Joppke, *American Journal of Sociology* "Lie's objective is to treat a series of large topics that he sees as related but that are usually treated separately: the social construction of identities, the origins and nature of modern nationalism, the explanation of genocide, and racism. These multiple themes are for him aspects of something he calls 'modern peoplehood.' His mode of demonstration is to review all the alternative explanations for each phenomenon, and to show why each successively is inadequate. His own theses are controversial but he makes a strong case for them. This book should renew debate." Immanuel Wallerstein, Yale University and author of *The Decline of American Power: The U.S. in a Chaotic World*

Modern Peoplehood

From the 18th century, Oceania became the principal laboratory of raciology for scholars, voyagers, and colonizers alike. By juxtaposing encounters and theory, this magisterial book explores the semantics of human difference in all its emotional, intellectual, religious, and practical dimensions. The argument developed is subtle, engrossing, and gives the paradigm of 'race' its full use value. *Foreign Bodies* is a model of analysis and erudition from which historians of science and everyone interested in intercultural relations will greatly profit.

The Civilizing Power

By featuring the life histories of eight senior men, *Making Men in Ghana* explores the changing meaning of becoming a man in modern Africa. Stephan F. Miescher concentrates on the ideals and expectations that formed around men who were prominent in their communities when Ghana became an independent nation. Miescher shows how they negotiated complex social and economic transformations and how they dealt with their mounting obligations and responsibilities as leaders in their kinship groups, churches, and schools. Not only were notions about men and masculinity shaped by community standards, but they were strongly influenced by imported standards that came from missionaries and other colonial officials. As he recounts the life histories of these men, Miescher reveals that the passage to manhood—and a position of power, seniority, authority, and leadership—was not always welcome or easy. As an important foil for studies on women and femininity, this groundbreaking book not only explores masculinity and ideals of male behavior, but offers a fresh perspective on African men in a century of change.

American Paintings of the Nineteenth Century

The tragic story of Clisson and Eugenie reveals one of history's great leaders to also be an accomplished writer of fiction. Written in an eloquently Romantic style true to its period, the story offers the reader a fascinating insight into how the young Napoleon viewed love, women and military life.

Evolution of Awareness, the debut poetry collection from Kia Marlene, is a book about a spiritual journey towards enlightenment. The collection consists of 6 chapters, titled "The Egg," "The Caterpillar," "Intermission (heartbreak&love)," "The Cocoon," "The Butterfly," and a chapter titled "Knock Knock." Through numerous poems this book outlines various thoughts, questions and eventual answers concerning our collective greater purpose in life, self love, consciousness, and personhood. The author intends for this book to help broaden the reader's general perception, view of their environment, awareness, and sense of self.

Most Ancient Egypt

One of a series of systematic catalogues of the National Gallery of Art's collection, this comprehensive volume discusses in detail 310 objects that comprise one of the world's outstanding repositories of American naive paintings. Works by renowned folk artists such as Edward Hicks, Erastus Salisbury Field, and Ammi Phillips are represented in depth and placed in stylistic as well as historical context. This catalogue is an indispensable tool for historians of American painting and folk art, and for students of American life and culture. Thorough documentation and commentary are provided for the first time on some of the most intriguing images produced in America in the past two hundred years.

Foreign Bodies

This monograph explores the original literary produce of Muslim mystics during the eighth–tenth centuries, with special attention to ninth-century mystics, such as al-Tustar+, al-Mu% sib+, al-Kharr z, al-Junayd and, in particular, al-\$ak+m al-Tirmidh+. Unlike other studies dealing with the so-called ‘Formative Period’, this book focuses on the extant writings of early mystics rather than on the later bkf+ compilations. These early mystics articulated what would become a hallmark of Islamic mysticism: a system built around the psychological tension between the self (nafs) and the heart (qalb) and how to overcome it. Through their writings, already at this early phase, the versatility, fluidity and maturity of Islamic mysticism become apparent. This exploration thus reveals that mysticism in Islam emerged earlier than customarily acknowledged, long before Islamic mysticism became generically known as bkfism. The central figure of this book is al-\$ak+m al-Tirmidh+, whose teaching and inner world focus on themes such as polarity, the training of the self, the opening of the heart, the Friends of God (al-awliy ¾), dreams and visions, divine language, mystical exegesis and more. This book thus offers a fuller picture than hitherto presented of the versatility of themes, processes, images, practices, terminology and thought models during this early period. The volume will be a key resource for scholars and students interested in the study of religion, bkf+ studies, Late Antiquity and Medieval Islam.

Making Men in Ghana

The energy and optimism of the new nation are apparent in this catalogue, which features John Singleton Copley's *The Copley Family* and Gilbert Stuart's portraits of the first five presidents. Previously unpublished documents and infrared reflectograms shed new light on Benjamin West's Colonel Guy Johnson and Karonghyontye (Captain David Hill), Copley's Watson and the Shark, and Edward Savage's Washington Family.

Clisson and Eugénie

The National Gallery of Art proudly presents its remarkable collection of Dutch seventeenth-century paintings, with entries written by curator Arthur K. Wheelock Jr. The Gallery's Dutch collection, which numbers more than 130 paintings, includes works by many of the finest masters of the Golden Age, including Rembrandt van Rijn, Johannes Vermeer, Frans Hals, and Aelbert Cuyp. In it are outstanding examples of the portraits, genre scenes, landscapes, marine paintings, still lifes, and biblical and mythological scenes that have made this school of painting one of the most beloved and admired in the history of European art.

Evolution of Awareness

This work has been selected by scholars as being culturally important, and is part of the knowledge base of civilization as we know it. This work was reproduced from the original artifact, and remains as true to the original work as possible. Therefore, you will see the original copyright references, library stamps (as most of these works have been housed in our most important libraries around the world), and other notations in the work. This work is in the public domain in the United States of America, and possibly other nations. Within the United States, you may freely copy and distribute this work, as no entity (individual or corporate) has a copyright on the body of the work. As a reproduction of a historical artifact, this work may contain missing or blurred pages, poor pictures, errant marks, etc. Scholars believe, and we concur, that this work is important enough to be preserved, reproduced, and made generally available to the public. We appreciate your support of the preservation process, and thank you for being an important part of keeping this knowledge alive and relevant.

How do Documents Become Sources? Perspectives from Asia and Science Florence Bretelle-Establet
From Documents to Sources in Historiography The present volume develops a specific type of critical analysis of the written documents that have become historians' sources. For reasons that will be explained later, the history of science in Asia has been taken as a framework. However, the issue addressed is general in scope. It emerged from reflections on a problem that may seem common to historians: why, among the huge mass of written documents available to historians, some have been well studied while others have been dismissed or ignored? The question of historical sources and their (unequal) use in historiography is not new. Which documents have been used and favored as historical sources by historians has been a key historiographical issue that has occupied a large space in the historical production of the last four decades, in France at least.

Perspectives on Early Islamic Mysticism

This survey of more recent work on Herodotus, Thucydides and Polybius synthesises some of the most important research from the last few decades.

American Paintings of the Eighteenth Century

Alzire first appeared on the stage in 1736 to great acclaim and success. Alzire is set Lima, Peru, at the time of the Spanish conquest. Don Gusman, a Spanish grandee, has just succeeded his father, Don Alvarez, in the Governorship of Peru. The rule of Don Alvarez had been beneficent and just; he had spent his life in endeavoring to soften the cruelty of his countrymen; and his only remaining wish was to see his son carry on the work which he had begun. Unfortunately, however, Don Gusman's temperament was the very opposite of his father's; he was tyrannical, harsh, headstrong, and bigoted. It is in vain that Don Alvarez reminds his son that the true Christian returns good for evil and as a result tragedy insues. Wilder Publications is a green publisher. All of our books are printed to order. This reduces waste and helps us keep prices low while greatly reducing our impact on the environment.

India: what Can it Teach Us?

An observational study is an empirical investigation of the effects of treatments, policies, or exposures. It differs from an experiment in that the investigator cannot control the assignments of treatments to subjects. Scientists across a wide range of disciplines undertake such studies, and the aim of this book is to provide a sound statistical account of the principles and methods for the design and analysis of observational studies. Readers are assumed to have a working knowledge of basic probability and statistics, but otherwise the account is reasonably self-contained. Throughout there are extended discussions of actual observational studies to illustrate the ideas discussed. These are drawn from topics as diverse as smoking and lung cancer, lead in children, nuclear weapons testing, and placement programs for students. As a result, many researchers involved in observational studies will find this an invaluable companion to their work.

Dutch Paintings of the Seventeenth Century

New Mobilities Regimes analyses how global mobilities are changing the world of today and the role of political and economic power. Bringing together essays by leading scholars and social scientists, including Mimi Sheller and Bülent Diken with the work of well-known artists and art theorists such as Jordan Crandall, Ursula Bieman, Gülsün Karamustafa and Dan Perjovschi this book is a unique document of the cross-disciplinary mobility and power discourse. The specific design, integrating the text and art elements to create a singular dialogue makes for an exciting intellectual and aesthetic experience. Illustrated by a range of studies which examine the regulation and structure of mobility, such as the daily routines of teleworkers, Ukrainian cleaners in Western Europe, the mobility policies of global corporations, and the impact of bicycle policies on public space, New Mobilities Regimes emphasizes the routes and crossroads of migration flows as well as at the interaction of mobility and new spatial concepts. The contributors are concerned with both the positive outcomes and the disappointments of the global mobilizations in modern lives. This book is ground-breaking in that it calls for the reassessment of the figurative arts in providing independent and insightful knowledge-generating research on the nature of mobility and highlights the new appreciation of visual representations in sociology, cultural geography and anthropology.

Kings of Kashmira

The Viennese Jesuit court astronomer Maximilian Hell was a nodal figure in the eighteenth-century circulation of knowledge. He was already famous by the time of his celebrated 1769 expedition for the observation of the transit of Venus in northern Scandinavia. However, the 1773 suppression of his order forced Hell to develop ingenious strategies of accommodation to changing international and domestic circumstances. Through a study of his career in local, regional, imperial, and global contexts, this book sheds new light on the complex relationship between the Enlightenment, Catholicism, administrative and academic reform in the Habsburg monarchy, and the practices and ends of cultivating science in the Republic of Letters around the end of the first era of the Society of Jesus.

A Compendious Dictionary of the French Language

In Caravaggio, Varriano uncovers the principles and practices that guided Caravaggio's brush as he made some of the most controversial paintings in the history of art. He sheds an important new light on these disputes by tracing the autobiographical threads in Caravaggio's paintings, framing these within the context of contemporary Italian culture.

It is the oldest surviving example of historiography in the French vernacular, and is presented here in full with a facing-page translation in modern English prose and extensive explanatory notes.

Looking at it from Asia: the Processes that Shaped the Sources of History of Science

This volume addresses an eclectic mix of topics that adapt theoretical concepts relating to the management of libraries to stretch the boundary of practice. The nine contributions include a definition of knowledge management, the Internet and ebooks, and various case studies.

In September 1791, two years after the Revolution, French Jews were granted full rights of citizenship. Scholarship has traditionally focused on this turning point of emancipation while often overlooking much of what came before. In *Rites and Passages*, Jay R. Berkovitz argues that no serious treatment of Jewish emancipation can ignore the cultural history of the Jews during the *ancien régime*. It was during the late seventeenth and eighteenth centuries that several lasting paradigms emerged within the Jewish community—including the distinction between rural and urban communities, the formation of a strong lay leadership, heightened divisions between popular and elite religion, and the strain between local and regional identities. Each of these developments reflected the growing tension between tradition and modernity before the tumultuous events of the French Revolution. *Rites and Passages* emphasizes the resilience of religious tradition during periods of social and political turbulence. Viewing French Jewish history through the lens of ritual, Berkovitz describes the struggles of the French Jewish minority to maintain its cultural distinctiveness while also participating in the larger social and economic matrix. In the *ancien régime*, ritual systems were a formative element in the traditional worldview and served as a crucial repository of memories and values. After the Revolution, ritual signaled changes in the way Jews related to the state, French society, and French culture. In the cities especially, ritual assumed a performative function that dramatized the epoch-making changes of the day. The terms and concepts of the Jewish religious tradition thus remained central to the discourse of modernization and played a powerful role in helping French Jews interpret the diverse meanings and implications of emancipation. Introducing new and previously unused primary sources, *Rites and Passages* offers a fresh perspective on the dynamic relationship between tradition and modernity.

Observational Studies

Of all Italian painters, Caravaggio (c. 1565-1609) speaks most intensely to the modern world. His early works suggest a fascination with his own youth and sexuality and the transience of love and beauty; his later religious art speaks of violence, passion, solitude and death. Ugly, almost brutal-looking, Caravaggio was constantly embroiled in fights and entangled with the law; the prototype anti-social artist, he moved between the worlds of powerful patrons and the street life of boys and prostitutes. Helen Langdon uncovers his progress from childhood in plague-ridden Milan to wild success in Rome, and eventual exile and persecution in the South, and sets his work against the political, intellectual and spiritual movements of the day. Fully illustrated, her dramatic portrait shows Caravaggio's life to be as sensational and enigmatic as his powerful and enduring art.

New Mobilities Regimes in Art and Social Sciences

"The following notes on war customs, practises and ceremonies of the Maori have been collected by myself from members of the Tuhoe or Urewera tribe, a people who, though numerically small, have ever been noted for their prowess in war".--p. 1.

Maximilian Hell (1720-92) and the Ends of Jesuit Science in Enlightenment Europe

This book offers a new reading of one of the most important inscriptions from ancient Sparta, the Damonon stele. That inscription records victories that two Spartans, Damonon and his son Enymakratidas, won in the late fifth century BCE in equestrian and athletic competitions at religious festivals in and around Sparta. Scholars have repeatedly turned their attention to the Damonon stele because it offers invaluable insight into multiple facets of Spartan society. The inscription is commonly understood as cataloging dozens of victories won in the four-horse chariot race as well as other victories won in the horse-race and in footraces of various lengths. Careful study of the wording and structure of the inscription and relevant comparanda suggests that the most of Damonon's victories were actually won in the kalpe, a contest for mares in which the rider dismounted and ran alongside his horse in the final part of the race. Three fragmentary terracotta votive plaques found in the excavations at the shrine of Agamemnon and Alexandra at Amyklai show that the competitions in the kalpe were held near Sparta in Damonon's time. The re-interpretation of the Damonon stele proposed here has important ramifications, along multiple axes, for our understanding of both ancient Greek horse-racing and ancient Lakedaimon. Among other things, we are given a rare glimpse of the Lakedaimonian state at work. We see a Lakedaimon that is evolving rapidly in response to emergent military imperatives and Lakedaimonians who are ready, willing, and able to make swift, well-designed changes to the structure of religious festivals, and to manipulate gender expectations, in order to alter the structure of status competition and patterns of conspicuous consumption. Those changes, and the thought processes behind them, reveal a considerable level of complexity in Lakedaimonian thinking about their own social and political institutions and customs. That would not be surprising if manifested in Athens, but it contrasts sharply with the persistent picture of Lakedaimonians as unsophisticated and of Lakedaimon as a staid, conservative place with a static sociopolitical system. Indeed, the capacity of the Lakedaimonian state to make rapid, incremental changes that were in harmony with the overall structure of its sociopolitical system may well have been a key element in Lakedaimon's unusual stability.
