Doing Naval History

As Europe was poised on the cusp of the Great War (1914-1918), issues of national defence were of paramount concern. Despite the importance to German security of concentrating its resources on continental defence within Europe, the preceding years had been steeped in the cult of the navy. Germany's daunting pursuit of Weltpolitik had raised a serious challenge to traditional British naval hegemony. At issue were the future course of international relations, economic development and, crucially, the balance of power on both regional and global scales. Published in early 1914, some papers in this volume reviewed historic contributions of the British navy, offering a timely opportunity to formulate a better understanding of how the navy might be expected to perform in the future. The contents are evenly divided between essays on naval and military history, with the value of such historical analyses to contemporary officers being an explicit theme throughout.

King Professor of Maritime History at the U.S. Naval War College, between 2001 and 2009. They represent a wide historical perspective that ranges across nearly four centuries of maritime history. A number of these pieces have been published previously but have appeared in other languages and in other countries, where they may not have come to the attention of an American naval reading audience. This collection is divided into parts that deal with four major themes: the broad field of maritime history; general naval history, with specific focus on the classical age of sail, from the mid-seventeenth century to the end of the Napoleonic Wars in 1815; the wide scope of American naval history from 1775 to the end of the twentieth century; and finally, the realm of naval theory and its relationship to naval historical studies. They are reprinted, with only minor alterations, as they originally appeared. This work may appeal to general history readers, scholarly and general adult readers of history especially naval and maritime, plus students pursuing coursework in military science degree programs. Talking about Naval History

After the conclusion of the International Congress of Historical Studies in April last, in the scheme of which a Naval and Military Section was included for the first time, it seemed desirable to some members of the Committee in charge of the new Section that the papers read should be published in book form. The authorities of the Congress having decided in due course that they were unable themselves to make provision for such publication, it was suggested that the papers in question might appropriately be collected to form a volume in the Naval and Military Series which had recently been announced by the Cambridge University Press. The suggestion was readily accepted by the Editors of the Series and the Syndics of the Press.

Naval and Military Essays

The articles collected here (two appearing for the first time in English) cover a number of topics central to naval history and illustrate the author's contention that this is not only, or even chiefly, a distinct area of special study, but rather a central theme running through the history of England, and of the whole British Isles. Though the subjects and the styles vary a good deal, the studies are linked by a common approach and some common ideas. Hence many examine ways in which naval history has formed a key element in such subjects as intellectual, religious, administrative or medical history and explored the nature and meaning of sea power as a theme. At the same time naval history is a technical subject, which demands a willingness to understand warships - the most complex artefacts - and the structure of large and complex organisations. Detailed evidence about ships and weapons can build large conclusions, for example about late Anglo-Saxon government and military organisation, or about the nature of warfare at sea in the Renaissance era. While mostly written from the British point of view, several essays explicitly survey naval developments over a range of countries, and even the most narrowly focused are at least implicitly aware of the wider world of war at sea.

Not illustrated. 1908 edition. Excerpt: ... come unprepared. Were, then, his previous study and reflection, for which the time of action had not come, were they not " practical," because they did not result in immediate action? Would they even have been "not practical" if the time for action had never come to him? As the wise man said, "There is a time for everything under the sun," and the time for one thing cannot be used as the time for another. That there is time for action, all concede; few consider duly that there is also a time for preparation. To use the time of preparation for preparation is practical, whatever the method; to postpone preparation to the time for action is not practical. Our new navy is preparing now; it can scarcely be said, as regards its material, to be yet ready. The day of grace is still with us--or with those who shall be the future captains and admirals. There is time yet for study; there is time to imbibe the experience of the past, to become imbued, steeped, in the eternal principles of war, by the study of its history and of the maxims of its masters. But the time of preparation will pass; some day the time of action will come. Can an admiral then sit down and re-enforce his intellectual grasp of the problem before him by a study of history, which is simply a study of past experience? Not so; the time of action is upon him, and he must trust to his horse sense. The mere administration and correspondence of a fleet leaves all too little time. Even with captains, the administration of a single ship of the modern type makes demands that leave little room for the preparation of study. Farragut bewailed this burden; and Napoleon himself in his later days admitted that he never did better work than in his first campaign, to which he brought preparation...

Naval and Military Essays

This new book brings together Britain's leading naval historians and analysts to present a comprehensive investigation of British naval thinking and what has made it so distinctive over the last three centuries, from the sailing ship era to the current day. This new volume describes in depth the beginnings of formalized thought about the conduct of naval operations in the 18th Century, its transformation through the impact of industrialization in the 19th Century and its application in the two World Wars of the twentieth. This book concludes with a review of modern British naval thinking and

the appearance of naval doctrine against the uncertainties of the loss of empire, the Cold War, nuclear weapons and the huge changes facing us as we move in to the new millennium. How perceptive and distinctive was British naval thinking? Where did British ideas come from? Did they determine or merely follow British experience? Do they explain British naval success? The contributors to this volume tackle these key questions in a book that will be of considerable interest to the maritime community around the English-speaking world. This book will be of great interest to all students and professionals with an interest in the history of the Royal Navy, contemporary British maritime operations and strategic studies. This is a commemorative volume of the life and work of the distinguished Professor Bryan Ranft.

Essays in Naval History, from Medieval to Modern

Medieval warfare on both land and sea examined by leading scholars in the field. Different aspects of medieval warfare form the focus for this collection of essays by both established and new scholars. They range from a reconsideration of several problems of military historiography to explorations of the medieval view of divine influence on the battlefield, and the emergence of complex strategic and tactical norms of naval warfare in the medieval Mediterranean. Other topics examined include the role of mercenaries; crusader warfare; and Anglo-Norman women at war. Contributors: BERNARD S. BACHRACH, THERESA M. VANN, PAUL E. CHEVEDDEN, STEPHEN MORILLO, EDWARD G. SCHOENFELD, KENT G. HARE, KELLY DEVRIES, STEVEN ISAAC, JEAN A. TRUAX, STEVEN G. LANE, DOUGLAS C. HALDANE, LAWRENCE V. MOTT

Doing Naval History

In September 2005, fifty-five chiefs of navies and coast guards, along with twenty-seven war college presidents from around the world gathered in Newport for the Seventeenth International Seapower Symposium. We shared perspectives on a broad range of issues important to the global maritime community and individual countries through the mechanism of regionally oriented seminars. As the symposium drew to a close, a consensus was articulated that maritime security was fundamental to address these concerns, that the scope of security challenges reached beyond the waters of individual nations, and most importantly, that the responsibilities in the maritime domain—the great “commons” of the world—were shared. Moreover, the need was expressed for regional and global mechanisms that allowed maritime nations to more routinely and effectively bring their particular capabilities together to ensure a free and secure maritime domain. The host of the ISS, Admiral Mike Mullen, summarized the key proposition of the symposium: “Because today’s challenges are global in nature, we must be collective in our response. We are bound together in our dependence on the seas and in our need for security of the vast commons. This is a requisite for national security, global stability, and economic prosperity.” Acknowledging that “the United States Navy could not, by itself, preserve the freedom and security of the entire maritime domain,” Admiral Mullen said that “it must count on assistance from like-minded nations interested in using the sea for lawful purposes and precluding its use by others that threaten national, regional, or global security.” So too must each nation count on assistance from other nations. Over the past two years the Naval War College has found itself in a position of prominence in helping the leadership of our maritime forces, and the leaderships of our global partners, think through the implications of a new set of global security challenges and opportunities. It has been a very productive period since the College—against the fundamental notions of the Seventeenth International Seapower Symposium—was tasked to work on a new strategy “of and for its time.” Critical to our effort to rethink maritime strategy has been an extensive scenario analysis and war-gaming effort and a series of high-level conferences, symposia, and other professional exchanges with maritime partners here in Newport and at other venues around the world. This collaborative effort has produced great insight and brought into focus the diverse perspectives necessary to make this strategy robust across multiple arguments and useful for both naval leadership and national policy makers in understanding the key role maritime forces must play in the evolving international system. We see some interesting new ideas in this strategy: the preeminent value of maritime forces to underwrite stability for the global system and an emphasis on unique capabilities inherent in maritime forces to prevent global shocks and to limit and localize regional conflict. While this enhances the long-standing naval commitment to provide high-end capability, there are clear new demands related to sustaining the global system—unique in the maritime domain. The new maritime strategy also recognizes that capacity must rely increasingly, across the range of military operations, on an expanded set of more robust, global maritime relationships—in effect, partnerships that engender trust, enable prevention, and yield more effective maritime security. The present volume contributes clearly and significantly

to building just this sort of maritime partnerships. In subsequent guidance to the Naval War College, Admiral Mullen emphasized that any new strategy must be one viewed through the eyes of our partners. The essays from the Americas that follow are a compendium of "perspectives on maritime strategy."

Strategy and the Sea

These studies show how the British Empire used its maritime supremacy to construct and maintain a worldwide defence for its imperial interests. They rebut the idea that British defence policy in the late 19th and early 20th centuries was primarily concerned with the balance of power in Europe.

Admiral Dönitz' essay on the Conduct of the War at Sea is published... for several reasons. It has historical significance as a review of the German Navy's participation in World War II. Also, from the standpoint of naval science, the opinions of an enemy naval officer of Dönitz' caliber merit study and consideration. Still more important is the forceful presentation of Hitler's fatal error in disregarding or underestimating the necessity of sea power as a prerequisite to a major political power engaging successfully in war of any magnitude - or, by the same token, defending successfully its own political and economic boundaries and rights. In order to assist in the analysis of the essay, this publication includes a biographical sketch of the author, introductory remarks concerning the essay's background and contents and a list of subjects in the form of a table of contents. Dönitz was interrogated in order to amplify certain portions and theories of the essay, and his interrogation is also published herewith. His reaction to such interrogation and to analyses made of the essay is set forth in the Introduction.

Naval Administration and Warfare

Alfred Thayer Mahan's *The Influence of Seapower upon History* is well known to students of naval history and strategy, but his other writings are often dismissed as irrelevant to today's problems. This collection of five of Mahan's essays, along with Benjamin Armstrong's informative introductions, illustrates why Mahan's work remains relevant to the 21st century and how it can help develop our strategic thinking. People misunderstand Mahan, the editor argues, because they have read only what others say about him, not what Mahan wrote himself. Armstrong's analysis is derived directly from Mahan's own writings. From the challenges of bureaucratic organization and the pit falls of staff duty, to the development of global strategy and fleet composition, to illustrations of effective combat leadership, Armstrong demonstrates that Mahan's ideas continue to provide today's readers with a solid foundation to address the challenges of a rapidly globalizing world.

The Indecisiveness of Modern War

In his groundbreaking book *The British Way in Warfare* (Routledge, 1990), David French outlined the skillful combination of maritime, economic and diplomatic power employed by Britain to achieve its international goals. Almost two decades later, this collection offers a reassessment of French's thesis, using it as a lens through which to explore Britain's relationship with various kinds of power (military and civil) and how this was employed across the globe. In particular, each essay addresses the ways in which the use of power manifested itself in the maintenance of Britain's place within the international system between 1856 and 1956. Adopting twin methodologies, the collection firstly addresses the broad question of Britain's relationship with other Great Powers and how these influenced the strategies used, before then testing these with specific case studies. By taking this approach, it is possible to discern which policies were successful and which failed, and whether these remained constant across time and space. Measuring Britain's strategy against her commercial, imperial, and military competitors (including France, the USA, Italy, Germany, and Russia) allows intriguing conclusions to be drawn about just how an essentially maritime power could compete with much larger - and potentially more powerful - continental rivals. With contributions from an outstanding selection of military scholars, this collection addresses fundamental questions about the intersection of military, economic and diplomatic history, that are as relevant today as they were during the height of Britain's imperial power. It will prove essential reading, not only for those with an interest in British military history, but for anyone wishing to understand how power - in all its multifaceted guises - can be employed for national advantage on the international stage.

The Development of Naval Thought

Talking about Naval History is a collection twenty essays selected from the writings of John B. Hattendorf, Ernest J. King Professor of Maritime History at the U.S. Naval War College, between 2001 and 2009. They represent a wide historical perspective that ranges across nearly four centuries of maritime history. A number of these pieces have been published previously but have appeared in other languages and in other countries, where they may not have come to the attention of an American naval reading audience. This collection is divided into parts that deal with four major themes: the broad field of maritime history; general naval history, with specific focus on the classical age of sail, from the mid-seventeenth century to the end of the Napoleonic Wars in 1815; the wide scope of American naval history from 1775 to the end of the twentieth century; and finally, the realm of naval theory and its relationship to naval historical studies. They are reprinted, with only minor alterations, as the originally appeared.

Our War-ships

Strategy and History comprises a selection of Professor Gray's key contributions to strategic debate over the past thirty years. These essays have been selected both because they had significant messages for contemporary controversies, and because they have some continuing relevance for today and the future. Each essay in this book is really about strategy in the modern world, and reflects the many dimensions of this complex subject. This book covers a wide range of subjects and historical events, but there are key issues covered throughout: being strategic the consequences of actions a respect for Clausewitz's theory of war historical dependency the importance of geography being critical of enthusiasm for technology over human factors the primacy of politics. This important publication provides an invaluable insight into the development of strategic studies over the past 30 years from one of the world's leading theorists and practitioners of the subject. The book will be of great interest to all students and analysts of strategy and international studies.

Naval Administration and Warfare; Some General Principles, with Other Essays

According to the author all aircrews, tacticians and those who direct them have to realise the limitations of air power during conflicts. For years opinion has differed as to whether the aircraft has altered war strategies or merely the tactics of war. This volume explores the limits of airpower.

Essay on the Military Policy and Institutions of the British Empire

The ten essays presented here are the result of a quarter-century of thinking by Reynolds (history, College of Charleston) about the strategic uses of the sea by true maritime great powers and by land-bound continental nations. His thesis is that geographic and strategic factors have largely shaped the characteristics of these states; his major evidence derives from their use of navies.
