Quantitative Techniques

This book provides a framework for understanding micro, small and medium sized enterprises (MSMEs) as important contributors to economic growth. By examining the economic and investment decisions behind these businesses, the author shows how managers of MSMEs can add value to the firm by applying managerial finance tools. Early chapters establish the basic tenets of new venture development and financing and explore the economic environment that business-owners inhabit, focusing on venture capital, microfinance intervention, and public sector interventions. Later chapters guide the reader through the process of financial planning and forecasting, and valuation, finishing with insights into how to harvest investments and make sound financial decisions. The book has interdisciplinary appeal and offers a timely consideration of MSMEs in developing economies. It will be valuable reading for all interested in the management and development of small businesses, the finance of entrepreneurship and policy affecting small and medium sized enterprises.

Quantitative Techniques

What is Qualitative Interviewing? is an accessible and comprehensive 'what is' and 'how to' methods book. It is distinctive in emphasising the importance of good practice in understanding and undertaking qualitative interviews within the framework of a clear philosophical position. Rosalind Edwards and Janet Holland provide clear and succinct explanations of a range of philosophies and theories of how to know about the social world, and a thorough discussion of how to go about researching it using interviews. A series of short chapters explain and illustrate a range of interview types and practices. Drawing on their own and colleagues' experiences Holland and Edwards provide real research examples as informative illustrations of qualitative interviewing in practice, and the use of a range of creative interview tools. They discuss the use of new technologies as well as tackling enduring

issues around asking and listening and power dynamics in research. Written in a clear and accessible style the book concludes with a useful annotated bibliography of key texts and journals in the field. What is Qualitative Interviewing? provides a vital resource for both new and experienced social science researchers across a range of disciplines.

Quantitative methods for decision makers

This report considers the biological and behavioral mechanisms that may underlie the pathogenicity of tobacco smoke. Many Surgeon General's reports have considered research findings on mechanisms in assessing the biological plausibility of associations observed in epidemiologic studies. Mechanisms of disease are important because they may provide plausibility, which is one of the guideline criteria for assessing evidence on causation. This report specifically reviews the evidence on the potential mechanisms by which smoking causes diseases and considers whether a mechanism is likely to be operative in the production of human disease by tobacco smoke. This evidence is relevant to understanding how smoking causes disease, to identifying those who may be particularly susceptible, and to assessing the potential risks of tobacco products.

Quantitative Methods in Economics and Finance

The guideline focuses specifically on evidence-based pharmacological treatments for AUD in outpatient settings and includes additional information on assessment and treatment planning, which are an integral part of using pharmacotherapy to treat AUD.

The International Symposium on Experimental Robotics (ISER) is a series of bi-annual meetings which are organized in a rotating fashion around North America, Europe and Asia/Oceania. The goal of ISER is to provide a forum for research in robotics that focuses on novelty of theoretical contributions validated by experimental results. The meetings are conceived to bring together, in a small group setting, researchers from around the world who are in the forefront of experimental robotics research. This unique reference presents the latest advances across the various fields of robotics, with ideas that are not only conceived conceptually but also explored experimentally. It collects robotics contributions on the current developments and new directions in the field of experimental robotics, which are based on the papers presented at the 14th ISER held on June 15-18, 2014 in Marrakech and Essaouira, Morocco. This present fourteenth edition of Experimental Robotics edited by M. Ani Hsieh, Oussama Khatib, and Vijay Kumar offers a collection of a broad range of topics in field and human-centered robotics.

Quantitative Data Analysis with SPSS for Windows explains statistical tests using the latest version of SPSS, the most widely used computer package for analysing quantitative data. Using the same formula-free, non-technical approach as the highly successful non-windows version, it assumes no previous familiarity with either statistics or computing, and takes the reader step-by-step through each of the techniques for which SPSS for Windows can be used, including: correlation simple and multiple regression multivariate analysis of variance and covariance factor analysis The book also contains a comprehensive range of exercises with answers, and covers issues such as sampling, statistical significance, and the selection of appropriate tests.

Management Information Systems provides comprehensive and integrative coverage of essential new technologies, information system applications, and their impact on business models and managerial decision-making in an exciting and interactive manner. The twelfth edition focuses on the major changes that have been made in information technology over the past two years, and includes new opening, closing, and Interactive Session cases.

Business Analysis Techniques

This book has been developed with a focus on the need to demystify the subject and make it easy for students to grasp the principles and details involved, and make it easily understandable to beginners exposed to the subject for the first time. An attempt has been made to explain things in a logical progression, in the simplest possible way so that neophytes may quickly grasp the concepts and methodology. A novel approach in the book is the illustrative use of computers with TORA package, as a problem-solving tool. In actual practice, situations arise with large and complex problems that are difficult to solve. At such times, using computers to solve problems gives fast and more accurate results. The chapters are arranged so as to progressively explain the workings of various models in actual practice through step-by-step procedures that so simplify and solve them, that even students from a non-mathematics academic background will grasp them quickly. Linear programming, the most powerful tool for managerial decision-making is covered elaborately, including thorough discussion of various LP methods and LP solutions, Duality in LP problems, sensitivity analysis, etc. Models in the book also use Linear Programming to reach solutions including those relating to transportation and transshipment, assignment, and Game Theory&illustrated with screen-shots of a computer with a TORA package. Readers whether students, business executives, managers, researchers and academicians will find that the insights and knowledge obtained from the book will stand them in good stead in both academic as well as occupational pursuits.

What is Narrative Research?

Johnny Saldana outlines the basic elements of longitudinal qualitative data, focusing on micro-levels of change observed within individual cases and groups of participants. He draws upon his primary expe-

rience in theater education to examine time and change in longitudinal qualitative studies; contending that "playwrights and qualitative researchers write for the same purpose: to create a unique, insightful, and engaging text about the human condition." Offering sixteen specific questions through which researchers may approach the analysis of longitudinal qualitative data, Professor Saldana presents a text intended as a primer for fellow newcomers to long term inquiry, based on traditional social science methods from traditional qualitative and quantitative paradigms, but enriched by an artist-educator's unconventional perspective.

Remediation in medical education is the act of facilitating a correction for trainees who started out on the journey toward becoming excellent physicians but have moved off course. This book offers an evidence-based and practical approach to the identification and remediation of medical trainees who are unable to perform to standards. As assessment of clinical competence and professionalism has become more sophisticated and ubiquitous, medical educators increasingly face the challenge of implementing effective and respectful means to work with trainees who do not yet meet expectations of the profession and society. Remediation in Medical Education: A Mid-Course Correction describes practical stepwise approaches to remediate struggling learners in fundamental medical competencies; discusses methods used to define competencies and the science underlying the fundamental shift in the delivery and assessment of medical education; explores themes that provide context for remediation, including professional identity formation and moral reasoning, verbal and nonverbal learning disabilities, attention deficit disorders in high-functioning individuals, diversity, and educational and psychiatric topics; and reviews system issues involved in remediation, including policy and leadership challenges and faculty development.

Human Sigma

'Represents the culmination of an 18-month-long project that aims to be the definitive review of this important topic. Accompanied by a scholarly literature review, some new analysis, and a wealth of evidence and insight... the report is a tour de force; a once-in-a-generation opportunity to take stock.' – Dr Steven Hill, Head of Policy, HEFCE, LSE Impact of Social Sciences Blog 'A must-read if you are interested in having a deeper understanding of research culture, management issues and the range of information we have on this field. It should be disseminated and discussed within institutions, disciplines and other sites of research collaboration.' – Dr Meera Sabaratnam, Lecturer in International Relations at the School of Oriental and African Studies, University of London, LSE Impact of Social Sciences Blog Metrics evoke a mixed reaction from the research community. A commitment to using data and evidence to inform decisions makes many of us sympathetic, even enthusiastic, about the prospect of granular, real-time analysis of our own activities. Yet we only have to look around us at the blunt use of metrics to be reminded of the pitfalls. Metrics hold real power: they are constitutive of values, identities and livelihoods. How to exercise that power to positive ends is the focus of this book. Using extensive evidence-gathering, analysis and consultation, the authors take a thorough look at potential uses and limitations of research metrics and indicators. They explore the use of metrics across different disciplines, assess their potential contribution to the development of research excellence and impact and consider the changing ways in which universities are using quantitative indicators in their management systems. Finally, they consider the negative or unintended effects of metrics on various aspects of research culture. Including an updated introduction from James Wilsdon, the book proposes a framework for responsible metrics and makes a series of targeted recommendations to show how responsible metrics can be applied in research management, by funders, and in the next cycle of the Research Excellence Framework. The metric tide is certainly rising. Unlike King Canute, we have the agency and opportunity – and in this book, a serious body of evidence – to influence how it washes through higher education and research.

Patient-centered, high-quality health care relies on the well-being, health, and safety of health care clinicians. However, alarmingly high rates of clinician burnout in the United States are detrimental to the quality of care being provided, harmful to individuals in the workforce, and costly. It is important to take a systemic approach to address burnout that focuses on the structure, organization, and culture of health care. Taking Action Against Clinician Burnout: A Systems Approach to Professional Well-Being builds upon two groundbreaking reports from the past twenty years, To Err Is Human: Building a Safer Health System and Crossing the Quality Chasm: A New Health System for the 21st Century, which both called attention to the issues around patient safety and quality of care. This report explores the extent, consequences, and contributing factors of clinician burnout and provides a framework for a systems approach to clinician burnout and professional well-being, a research agenda to advance clinician well-being, and recommendations for the field.

Quantitative Approaches in Business Studies

This ethnography gives a voice to a small group of students who are required to spend time in a school withdrawal-unit away from the mainstream classroom setting, most commonly following a period of sustained low-level disruption; students who all too often feel that their voice is not heard. What emerges through the telling of their lived experiences, is the breadth and diversity of ways - from the blatant to the inadvertent, the miniscule to the looming, the inter-personal to the structural - through which they make sense of their tangled, intricate, oftentimes deeply-individual marginalisation, as they navigate schooling day-by-day. Structural issues of transition, ability groups and pathways are seen to fuel marginalisation, as are aspects of classroom practice, such as behaviour management

policy enactment or the choice of pedagogical approach. Teacher-student relationships matter hugely, as does being known, respected and understood. Individual factors also play a role, with special educational needs, mental health concerns and family breakdown, all feeding into engagement and attitudes to school. Taking the experiences of these students seriously, the analysis shows that what is actually needed to tackle the assorted, messy, multi-dimensional nature of such lived marginalisation, is a radically comprehensive education system structure, with the social at its heart, where critical pedagogy is embedded classroom practice.

Feminism and the Politics of Childhood offers an innovative and critical exploration of perceived commonalities and conflicts between women and children and, more broadly, between various forms of feminism and the politics of childhood. This unique collection of 18 chapters brings into dialogue authors from a range of geographical contexts, social science disciplines, activist organisations, and theoretical perspectives. The wide variety of subjects include refugee camps, care labour, domestic violence and childcare and education. Chapter authors focus on local contexts as well as their global interconnections, and draw on diverse theoretical traditions such as poststructuralism, psychoanalysis, posthumanism, postcolonialism, political economy, and the ethics of care. Together the contributions offer new ways to conceptualise relations between women and children, and to address injustices faced by both groups. Praise for *Feminism and the Politics of Childhood: Friends or Foes?* 'This book is genuinely ground-breaking.' Val Gillies, University of Westminster 'Feminism and the Politics of Childhood: Friends or Foes?' asks an impossible question, and then casts prismatic light on all corners of its impossibility.' Cindi Katz, CUNY 'This provocative and stimulating publication comes not a day too soon.' Gerison Lansdown, *Child to Child* 'A smart, innovative, and provocative book.' Mathematical finance plays a vital role in many fields within finance and provides the theories and tools that have been widely used in all areas of finance. Knowledge of mathematics, probability, and statistics is essential to develop finance theories and test their validity through the analysis of empirical, real-world data. For example, mathematics, probability, and statistics could help to develop pricing models for financial assets such as equities, bonds, currencies, and derivative securities.

Qualitative Secondary Analysis

This book is available as open access through the Bloomsbury Open Access programme and is available on www.bloomsburycollections.com. This volume offers a new introduction to an evolving research method in the social sciences. Qualitative Longitudinal (QL) research is conducted through time. In its qualitative dimensions it opens up the potential to 'think dynamically' in creative, flexible and innovative ways. QL enquiry is rooted in a long-established tradition of qualitative temporal research, spanning the fields of social anthropology, sociological re-studies and biographical research. But over the past two decades, a growing body of scholarship has begun to document this approach and explore its theoretical underpinnings. This in turn has fuelled a growing interest in and rapid uptake of QL methodology across the disciplines and in international context. This practical volume will be a first port of call for students and researchers wishing to use QL research in their own projects. The chapters follow a logical development, from conceptual and methodological foundations, to research practice and ethics, to the generation and analysis of data. Each chapter offers practical examples drawn from the research field to illustrate key themes and the rich possibilities for new applications.

Atlas of Breast Disease Management

A practical atlas with 50 illustrative case studies, this text provides a multidisciplinary approach to the investigation and management of breast disease. It presents common conditions, and each case takes a structured format: symptoms; physical signs; imaging investigation; and appropriate cytology. High quality mammograms and illustrations of relevant pathology are also included.

Breast Cancer

Breast cancer continues to increase in frequency and approximately one million women per year are now diagnosed with the disease. There have been significant advances in our understanding and treatment of breast cancer and these have led to significant reductions in mortality. This book summarises current knowledge on breast cancer and provides a succinct, didactic comprehensive approach outlining how women with suspected breast cancer should be investigated and once a diagnosis is established, how they should be treated. The book is written by senior authors throughout Europe and the United States. It is aimed at doctors involved in the investigation and treatment of patients with breast cancer and it will also be valuable to breast care nurses, trainees and some senior medical students.

Atlas of Breast Cancer

A multidisciplinary approach to breast cancer, this text presents diagnostic and therapeutic approaches and includes information on new or experimental therapies. The book includes chapters on epidemiology, screening and diagnostic mammography, surgical techniques, radiotherapy techniques and biopsy processing.

Atlas of Breast Examination

The most effective method of detection of breast cancer is physical examination, and there is increasing pressure on the primary care team to know what to look for, how to recognise common abnormalities, and when to refer for further investigation. This handy atlas provides a unique collection of full colour photographs and mammograms to assist GPs and nurses in making successful and early diagnoses.

The Cancer Atlas

This atlas illustrates the latest available data on the cancer epidemic, showing causes, stages of development, and prevalence rates of different types of cancers by gender, income group, and region. It also examines the cost of the disease, both in terms of health care and commercial interests, and the steps being taken to curb the epidemic, from research and screening to cancer management programs and health education.

Resistance to therapies, both targeted and systemic, and metastases to distant organs are the underlying causes of breast cancer-associated mortality. The second edition of *Breast Cancer Metastasis and Drug Resistance* brings together some of the leading experts to comprehensively understand breast cancer: the factors that make it lethal, and current research and clinical progress. This volume covers the following core topics: basic understanding of breast cancer (statistics, epidemiology, racial disparity and heterogeneity), metastasis and drug resistance (bone metastasis, trastuzumab resistance, tamoxifen resistance and novel therapeutic targets, including non-coding RNAs, inflammatory cytokines, cancer stem cells, ubiquitin ligases, tumor microenvironment and signaling pathways such as TRAIL, JAK-STAT and mTOR) and recent developments in the field (epigenetic regulation, microRNAs-mediated regulation, novel therapies and the clinically relevant 3D models). Experts also discuss the advances in laboratory research along with their translational and clinical implications with an overarching goal to improve the diagnosis and prognosis, particularly that of breast cancer patients with advanced disease.

Breast Cancer Metastasis and Drug Resistance

This book is a compilation and discussion of data on the survival of cancer patients in 12 European countries. Measures of incidence, survival and mortality are critical to the interpretation of data on progress in the fight against cancer, and in the evaluation of the overall effectiveness of cancer control programmes. Randomized controlled clinical trials have shown many modern protocols for cancer treatment to be more effective than earlier treatments, but until now, comparable population-based survival figures have rarely been available. EURO CARE is a concerted action among European cancer registries, aimed at estimating and comparing the survival of cancer patients in different European populations. The rationale behind this project is to optimize the comparability of survival data by using an agreed and standard definition of the diseases for which survival is to be compared, and by taking due account of basic demographic variables. The EURO CARE Working Group succeeded in collecting, checking and editing data on cancer survival from 30 cancer registries in 12 countries, and established a database covering some 800,000 cancer patients in the period 1978-85 and followed up to the end of 1990. This database forms the raw material for this monograph.

This book is a comprehensive guide to contrast-enhanced mammography (CEM), a novel advanced mammography technique using dual-energy mammography in combination with intravenous contrast administration in order to increase the diagnostic performance of digital mammography. Readers will find helpful information on the principles of CEM and indications for the technique. Detailed attention is devoted to image interpretation, with presentation of case examples and highlighting of pitfalls and artifacts. Other topics to be addressed include the establishment of a CEM program, the comparative merits of CEM and MRI, and the roles of CEM in screening populations and monitoring of response to neoadjuvant chemotherapy. CEM became commercially available in 2011 and is increasingly being used in clinical practice owing to its superiority over full-field digital mammography. This book will be an ideal source of knowledge and guidance for all who wish to start using the technique or to learn more about it.

Expert laboratory and clinical researchers from around the world review how to design and evaluate studies of tumor markers and examine their use in breast cancer patients. The authors cover both the major advances in sophisticated molecular methods and the state-of-the-art in conventional prognostic and predictive indicators. Among the topics discussed are the relevance of rigorous study design

and guidelines for the validation studies of new biomarkers, gene expression profiling by tissue microarrays, adjuvant systemic therapy, and the use of estrogen, progesterone, and epidermal growth factor receptors as both prognostic and predictive indicators. Highlights include the evaluation of HER2 and EGFR family members, of p53, and of UPA/PAI-1; the detection of rare cells in blood and marrow; and the detection and analysis of soluble, circulating markers.

Breast Cancer Management for Surgeons

This text describes a system of reporting breast fine needle aspiration biopsy that uses five clearly defined categories, each described by a specific term and each with a specific risk of malignancy. The five categories are insufficient/inadequate, benign, atypical, suspicious of malignancy and malignant. Each category has a risk of malignancy and is linked to management recommendations, which include several options because it is recognized that diagnostic infrastructure, such as the availability of core needle biopsy and ultrasound guidance, vary between developed and low and middle income countries. This text includes key diagnostic cytological criteria for each of the many lesions and tumors found in the breast. The cytopathology of specific lesions is illustrated with high quality photomicrographs with clear figure descriptions. Chapters also discuss current and potential future ancillary tests, liquid based cytology, nipple cytology and management. An additional chapter provides an overview of an approach to the diagnosis of direct smears of breast fine needle aspiration biopsies. The International Academy of Cytology Yokohama System for Reporting Breast Fine Needle Aspiration Biopsy Cytopathology provides a clear logical approach to the diagnosis and categorization of breast lesions by FNAB cytology, and aims to facilitate communication with breast clinicians, further research into breast cytopathology and related molecular pathology, and improve patient care.

Although lymphoscintigraphy was originally introduced into clinical routine for identification of the cause of peripheral edema, more recently it has been widely applied for radioguided biopsy of the sentinel lymph node in patients with solid cancers. The procedure is now considered crucial for adequate planning of oncologic surgery in a growing number of cancers. This atlas presents a collection of richly illustrated teaching cases that demonstrate the clinical relevance and impact of lymphoscintigraphy in different pathologic conditions. After introductory chapters on the anatomy, physiology, and pathophysiology of lymphatic circulation, the role of lymphoscintigraphy in differential diagnosis of peripheral edema and characterization of intracavitary lymph effusions is addressed. The principal focus of the book, however, is on the use of lymphoscintigraphic mapping for radioguided sentinel node biopsy in cutaneous melanoma and cancers at a range of anatomic sites. The most commonly observed lymphoscintigraphic patterns are depicted, and anatomic variants and technical pitfalls of the procedure receive careful attention. The role of tomographic multimodality imaging is also considered. The atlas will be an excellent learning tool for residents in nuclear medicine and other specialists with an interest in the field.

This open access book gives an overview of the sessions, panel discussions, and outcomes of the Advancing the Science of Cancer in Latinos conference, held in February 2018 in San Antonio, Texas, USA, and hosted by the Mays Cancer Center and the Institute for Health Promotion Research at UT Health San Antonio. Latinos – the largest, youngest, and fastest-growing minority group in the United States – are expected to face a 142% rise in cancer cases in coming years. Although there has been substantial advancement in cancer prevention, screening, diagnosis, and treatment over the past few decades, addressing Latino cancer health disparities has not nearly kept pace with progress. The diverse and dynamic group of speakers and panelists brought together at the Advancing the Science of Cancer in Latinos conference provided in-depth insights as well as progress and actionable goals for Latino-focused basic science research, clinical best practices, community interventions, and what can be done by way of prevention, screening, diagnosis, and treatment of cancer in Latinos. These insights have been translated into the chapters included in this compendium; the chapters summarize the presentations and include current knowledge in the specific topic areas, identified gaps, and top priority areas for future cancer research in Latinos. Topics included among the chapters: Colorectal cancer disparities in Latinos: Genes vs. Environment Breast cancer risk and mortality in women of Latin American origin Differential cancer risk in Latinos: The role of diet Overcoming barriers for Latinos on cancer clinical trials Es tiempo: Engaging Latinas in cervical cancer research Emerging policies in U.S. health care Advancing the Science of Cancer in Latinos proves to be an indispensable resource offering key insights into actionable targets for basic science research, suggestions for clinical best practices and community interventions, and novel strategies and advocacy opportunities to reduce health disparities in Latino communities. It will find an engaged audience among researchers, academics, physicians and other healthcare professionals, patient advocates, students, and others with an interest in the broad field of Latino cancer.

Advancing the Science of Cancer in Latinos

Despite many years of translational research in breast cancer, very few new biomarkers have been implemented for clinical use beyond estrogen receptor, progesterone receptor, and HER2. The main reason is that many promising biomarkers are clinically validated but lack analytical and clinical utility. One explanation is that proper validation of the predictive ability of the biomarker in independent datasets, and with a pre-planned statistical analysis, is not always performed. Thus, there is a need to identify new biomarkers or new ways to subclassify breast cancer patients that are reproducible and easy to implement in the clinical setting but, more importantly, that improve patient's outcomes.

New Approaches to Classification and Diagnostic Prediction of Breast Cancers

This text is intended as a practical guide for physicians and surgeons who treat diseases of the breast, both benign and malignant. Thus, general surgeons, internists, family practitioners, gynecologists, surgical oncologists, radiation oncologists, and medical oncologists will find this book useful. The management of breast diseases requires a multidisciplinary approach, and this textbook therefore includes the views of a wide range of specialists from throughout the world. Today the treatment of breast diseases is largely predicated on the results of randomized prospective trials. The results of many clinical trials are discussed in detail, and readers will find this book to be a useful guide to the evidence-based treatment of breast diseases. The revised edition provides a comprehensive update of the previous version of the book. Specifically, it contains 2 new chapters: "Molecular Classification of Breast Cancer" and "Breast Cancer Molecular Testing for Prognosis and Prediction". In addition, since publication of the previous edition, the results of numerous adjuvant systemic therapy and neo-adjuvant systemic therapy trials have been published, and this edition provides a comprehensive overview of these trials and discusses how they have changed the management of breast cancer. Similarly, there have been, in the last few years, important new developments in the local therapy of breast cancer. This edition discusses these new developments and particularly recent developments and controversies concerning the management of the axilla in patients with primary breast cancer. New guidelines with respect to radiotherapy are also reviewed and discussed. Finally, all chapters in the book are thoroughly revised and updated to provide readers with current understanding of the biology and treatment of breast cancer.

Management of Breast Diseases

This book presents the current trends and practices in breast imaging. Topics include mammographic interpretation; breast ultrasound; breast MRI; management of the symptomatic breast in young, preg-

nant and lactating women; breast intervention with imaging pathological correlation; the postoperative breast and current and emerging technologies in breast imaging. It emphasizes the importance of fostering a multidisciplinary approach in the diagnosis and treatment of breast diseases. Featuring more than 800 high-resolution images and showcasing contributions from leading authorities in the screening, diagnosis and management of the breast cancer patient, Breast Cancer Screening and Diagnosis is a valuable resource for radiologists, oncologists and surgeons.

This atlas describes and illustrates a novel approach, referred to as full breast ultrasonography (FBU), that represents a challenge to conventional breast imaging diagnosis. The coverage encompasses examination technique, diagnostic criteria, the imaging features of a wide variety of lesions, and role in follow-up. FBU involves anatomic ultrasound scanning based on the ductal echography technique proposed by Michel Teboul, supplemented by Doppler and real-time sonoelastography. The approach offers a variety of advantages. Compared with MRI it has a lower cost, wider availability, better resolution, and improved correlation with anatomy. Compared with mammography it has the benefits of absence of irradiation and pain, applicability in all cases, and better overall accuracy. Furthermore, the standardized technique of acquisition and interpretation means that it is suitable as a screening test, unlike classic ultrasonography. FBU is applicable in ultrasound BI-RADS assessment and is of value in depicting both benign and malignant conditions. It can be recommended as a first-line method of diagnosis and for the follow-up of treated breasts, regardless of the patient's age, sex, or physical condition.

This book provides a comprehensive overview on issues surrounding fertility in patients who have been diagnosed with breast cancer or belong to a high-risk population. The impact of breast cancer treatment on fertility is clearly explained and all the available options for fertility preservation are discussed, including the use of assisted reproduction technologies. Guidance is offered on family planning and on management options when breast cancer arises during pregnancy and when pregnancy occurs after breast cancer. Answers are provided to a wide range of key questions, including: What is the impact of pregnancy after breast cancer on prognosis? What advice should be given on the timing of pregnancy in relation to chemotherapy and endocrine treatment? What is the effect of reducing the duration of endocrine treatment to allow an earlier attempt at pregnancy? Is breast feeding possible? Medical treatments of breast cancer have a huge impact on fertility. While many procedures can be applied to preserve fertility, all must be put into action within the very short time available before starting treatment. Any delay in referral of a woman wishing to preserve her fertility to an ART center with experience in oncologic patients may preclude the possibility of a future pregnancy. In addition, an increasing number of high-risk patients are asking questions about their reproductive life, from choice of contraception to the risks of assisted reproduction techniques. Physicians will find this book an invaluable aid in providing flawless counseling to their patients and ensuring that they receive optimal management.

The American Joint Committee on Cancer's Cancer Staging Manual is used by physicians throughout the world to diagnose cancer and determine the extent to which cancer has progressed. All of the TNM staging information included in this Sixth Edition is uniform between the AJCC (American Joint Committee on Cancer) and the UICC (International Union Against Cancer). In addition to the information found in the Handbook, the Manual provides standardized data forms for each anatomic site, which can be utilized as permanent patient records, enabling clinicians and cancer research scientists to maintain consistency in evaluating the efficacy of diagnosis and treatment. The CD-ROM packaged with each Manual contains printable copies of each of the book's 45 Staging Forms.

This book focuses on the lobar anatomy of the breast and on the sick lobe concept – a novel theory of breast cancer development that is gaining ever wider acceptance – and explores their significance for innovative surgical treatment. Special attention is paid to the role of ductal echography, a technique capable of clearly depicting the structures of cancer in relation to the structures of the sick lobe. Having established a sound theoretical and practical basis through detailed coverage and correlation of anatomy, pathology, and imaging appearances, the book goes on to describe a revolutionary surgical approach particularly suitable for the treatment of multifocal and multicentric breast carcinomas. Such tumors account for more than a third of all cases of breast carcinoma and are often treated by mastectomy. The proposed new breast-conserving technique yields excellent cosmetic results and entails a very low risk of recurrence. The book will appeal to a wide readership, including radiologists, surgeons, oncologists, pathologists, as well as residents.

Breast Disease: Comprehensive Management provides a clear, concise source of information in order to make real-life, evidence-based decisions for all aspects of breast disease, both benign and malignant. The volume provides the latest breakthroughs in breast cancer research, ranging from paradigm shifts in the surgical management of the axilla, the changing role of adjuvant and neoadjuvant chemotherapy, the impact of molecular medicine in decision-making and the controversial role of prophylactic mastectomy in our era. Within select chapters, “How I do it” clinical scenarios are supplied and described in very practical terms. Also included at the end of each chapter are synoptic questions with detailed answers, akin to the self-assessment (SESAP) format questions and answers. These questions provide a basis for continuous medical education (CME) for the practicing physician and surgeon, further in surgical oncology and breast surgery, medical oncologists, radiation oncologists, and breast radiologists enhancing a focused approach to the management of breast disease in preparation for the American Board of Surgery certification and re-certification for the general surgeon. Dysphagia and problems related to swallowing are common following treatment for head and neck cancers. Though there are books available on dysphagia management and associated neurological conditions, this is the only atlas that comprehensively discusses dysphagia related to the head and neck cancers. It comprises of 33 chapters divided into five sections. The initial chapters present the anatomy and physiology of swallowing and the pathophysiology of the dysphagia-related structures. It discusses assessment of dysphagia in detail, highlighting clinical and instrumental evaluations. Swallowing dysfunction related to common sub-site cancers and chemo-radiotherapy related dysphagia are explored individually. The book addresses direct and indirect swallowing therapy methods involving postures and exercises in a detailed yet simple manner to enable them to be incorporated in routine practice. It also covers topics like nutritional management, alternative feeding methods and unique problems associated with tracheostomy that have a great bearing on the day-to-day management of patients with dysphagia. The current status of the research and evidence-based management updates are also included. Additionally, where appropriate videos are included for a better understanding of the subject. Written and edited by experts in the field, the book is intended for clinicians treating head and neck cancer, head and neck surgeons, radiation oncologists, speech and swallowing therapy specialists and trainees in these fields

Lewis's Medical-Surgical Nursing

Cuproptosis is a new type of cell death induced by copper that differs from other types of programmed cell death. Copper ions were discovered to bind to lipoacyl proteins during the tricarboxylic acid (TCA) cycle, resulting in abnormal lipoacyl protein oligomerization. Moreover, copper ions can also reduce the level of iron-sulfur cluster proteins, thereby causing the toxic stress response in proteins and ultimately leading to cell death. So far, cuproptosis's role in tumors, as well as the underlying mechanisms, are still unclear and require further investigation. Recent research suggests that inducing programmed death of abnormal cells could be one of the future methods for disease treatment and prevention. It can slow the progression of the disease and, eventually, cure it by causing tumor cell cuproptosis. Currently, the drug delivery system has received a lot of attention. It is also a novel idea to treat tumors by developing

a drug delivery system to induce abnormal cell cuproptosis, which will effectively reduce treatment complications and improve patients' life quality.

Breast Cancer

There have been very significant advances across many areas of the study, investigation and treatment of breast cancer. This publication surveys how scientific advances have influenced, improved and extended therapeutic options. The volume spans prevention, screening, genetics, and treatment of pre-invasive breast cancer, before focusing in depth on management of established breast cancer. This includes chapters on the various therapeutic options available and their role in treating breast cancer from the very earliest stage through to advanced and metastatic breast cancer. In addition, the text looks forward at the potential for emerging experimental strategies to become adopted into medical management in the future. The volume concludes with a chapter on palliative care. This wide-ranging account will be essential for breast cancer specialists, trainees in oncology and clinical research scientists.
