Course OverviewThe Community Emergency Response Team (CERT) Program educates individuals about disaster preparedness and trains and organizes teams of volunteers that can support their communities during disasters. The CERT Program offers training in basic disaster response skills, such as fire safety, light search and rescue, and disaster medical operations. With proper CERT training, you can help protect your family, neighbors, and co-workers if a disaster occurs. "Introduction to Community Emergency Response Teams (CERT)," IS-317, is an independent study course that serves as an introduction to CERT for those interested in completing the basic CERT training or as a refresher for current team members. The course includes six modules: CERT Basics, Fire Safety, Hazardous Material and Terrorist Incidents, Disaster Medical Operations, and Search and Rescue, and Course Summary. While IS-317 is useful as a primer or refresher for CERT training, it is not equivalent to, and cannot be used in place of, the classroom delivery of the CERT Basic Training. To become a CERT volunteer, one must complete the classroom training offered by a local government agency such as the emergency management agency, fire or police department. Contact your local emergency manager to learn about the local education and training opportunities available to you. Let this person know about your interest in taking CERT training. **Course Objectives:** After completing this course, CERT Independent Study (IS)-317, you should be able to: *Identify key concepts that form the foundation for CERT operations*Identify principles and guidelines for CERT activities This lesson provides an overview of the CERT role in disaster preparedness and response. It also covers what you will learn in other lessons about CERT organization and activities

Reauthorization of the Federal Fire Prevention and Control Act

The goal of the Radiological Emergency Response Independent Study (RERIS) course is to provide a learning experience in which participants demonstrate comprehensive understanding of radiological

protection and response principles, guidelines, and regulations through a cycle of text, stimulus, response, and reinforcement. This course of instruction will improve the performance of radiological response team members. FEMA's Radiological Emergency Response Operations (RERO) Course is performance-based training that consists of 4 1D2 days of hands-on, evaluated, exercised-based activities. Successful completion of the RERO course requires mastery level of certain knowledge before participation in the course. That knowledge is the focus of the RERO prerequisite courses, the Fundamentals Course for Radiological Monitors (FCRM), the Fundamentals Course for Radiological Response Teams (FCRRT) and this course, the Radiological Emergency Response Independent Study.

Animals in Disaster, Module A, Awareness and Preparedness, May 1998

This vital Federal Emergency Management Agency (FEMA) independent training course manual from the Emergency Management Institute (EMI) provides authoritative, official information about radiological emergency response. This course, IS-301, includes: Regulations and Guides for Radiation Protection and Response * Nuclear Physics for Radiological Emergency Response * Biological Effects and Internal Hazards of Radiation Exposure * External Dosimetry * Protection Actions and Protective Action Guides * Federal Response Systems * Incident Command System * Public Information and Media Relations * Environmental Monitoring * Introduction to Nuclear Reactors * Radioactive Materials Transportation * Radiological Hazard Area Control. This is one of the series of influential FEMA documents providing crucial material on disasters and emergency response. The goal of the Radiological Emergency Response Independent Study (RERIS) course is to provide a learning experience in which participants demonstrate comprehensive understanding of radiological protection and response principles, guidelines, and regulations through a cycle of text, stimulus, response, and reinforcement. This course of instruction will improve the performance of radiological response team members. At the conclusion of this course, learners will be able to do the following: Differentiate between regulations, standards, law, license conditions, Regulatory Guides, Nuclear Regulatory Commission Regulatory (NUREG) documents, and Radiological Emergency Preparedness (REP) reports that apply to radiological emergency response operations; Apply basic concepts of nuclear and health physics appropriate to the needs of radiological emergency response personnel; Convert between traditional and SI units of radiation and radiation exposure; Convert between "standard notation" and "scientific notation"; Associate various biological effects with levels of exposure to ionizing radiation; Trace the pathway of radioactive material into, through, and out of the human body; Select appropriate external dosimetry for radiological emergency response operations and identify limitations of dosimetry devices; Associate radiation protection principles and procedures with characteristics of nuclear radiation; Define the Environmental Protection Agency (EPA) Protective Action Guides (PAGs) and the recommendations of the National Council on Radiation Protection and Measurements (NCRP); Summarize the Federal/State/local government relationship for different types of radiological emergencies; Plan radiological emergency response operations that are consistent with the Incident Command System (ICS) Differentiate between the roles of the media, the public information officer, and the radiological response team in radiological emergency response operations; Give reasons for and components of environmental monitoring in a radiological emergency; Apply knowledge of nuclear power plant structure, operations, and emergency response procedures to the role of the radiological response team member in a related emergency; Apply knowledge of radioactive materials transportation regulations to the role of the radiological response team member in responding to a related emergency; and Develop a checklist for analysis and control of a radiological hazard area. This is a privately authored news service and educational publication of Progressive Management. Our publications synthesize official government information with original material - they are not produced by the federal government. They are designed to provide a convenient user-friendly reference work to uniformly present authoritative knowledge that can be rapidly read, reviewed or searched. Vast archives of important data that might otherwise remain inaccessible are available for instant review no matter where you are. This e-book format makes a great reference work and educational tool.

The Professional Protection Officer: Security Strategies, Tactics and Trends, Second Edition, is the definitive reference and instructional text for career oriented security officers in both the private and public sectors. The first edition originated with the birth of the International Foundation for Protection Officers (IFPO) in 1988, which has been using the book as the official text since that time. Each subsequent edition has brought new and enlightened information to the protection professional. The

material in this new edition includes all of the subjects essential to training of protection professionals, and has been updated to reflect new strategies, tactics, and trends in this dynamic field. Written by leading security educators, trainers and consultants, this valuable resource has served as the definitive text for both students and professionals worldwide. This new edition adds critical updates and fresh pedagogy, as well as new diagrams, illustrations, and self assessments. The Professional Protection Officer: Security Strategies, Tactics and Trends is tailored to the training and certification needs of today's protection professionals and proves to be the most exciting and progressive edition yet. Information included is designed to reflect the latest trends in the industry and to support and reinforce continued professional development. Concludes chapters with an Emerging Trends feature, laying the groundwork for the future growth of this increasingly vital profession. Written by a cross-disciplinary contributor team consisting of top experts in their respective fields.

The International Foundation for Protection Officers (IFPO) has for many years provided materials to support its certification programs. The current edition of this book is being used as the core text for the Security Supervision and Management Training/Certified in Security Supervision and Management (CSSM) Program at IFPO. The CSSM was designed in 1988 to meet the needs of the security supervisor or senior protection officer. The book has enjoyed tremendous acceptance and success in the past, and the changes in this third edition, vetted by IFPO, make it still more current and relevant. Updates include 14 new chapters, 3 completely revised chapters, "Student Performance Objectives" in each chapter, and added information on related resources (both print and online). * Completion of the Security Supervision and Management Program is the initial step toward the Certified in Security Supervision and Management (CSSM) designation * Over 40 experienced security professionals contribute chapters in their area of specialty * Revised throughout, and completely updated with 14 new chapters on topics such as Leadership, Homeland Security, Strategic Planning and Management, Budget Planning, Career Planning, and much more. * Quizzes at the end of each chapter allow for self testing or enhanced classroom work

Fundamentals of Firefighter Skills with Hazardous Materials Response, Fifth Edition with Navigate Premier Access is the complete teaching and learning solution for Firefighter I and Firefighter II with Hazardous Materials Response courses.

Department of Homeland Security Appropriations for Fiscal Year ...

Emergency management provides the coordination needed to develop an effective community response to disasters. This critical public safety function is typically performed in mobile command posts in the field and in the jurisdiction's emergency operations center. Preparing individuals who will work in these facilities to perform their tasks under emergency conditions requires effective and realistic exercise training. The Federal Emergency Management Agency provides a five model exercise design for progressive training of emergency management staffs. This study examines the history and theoretical basis for exercises. From this background, it suggests alternatives to these five models to provide greater flexibility in delivery, options for specialized training in decision making, exercises that will support all phases of emergency management, and options for increased realism. Among the

alternatives suggested are Tactical Decision Games, What-If Exercises, Postal Exercises, and a variety of simulation tools. The book is accompanied by a detailed appendix that provides specific instructions for each exercise type.
