Instant Notes in Microbiology

Instant Notes in Medical Microbiology covers medical microbiology from the molecular biology of infectious agents right through to the clinical management of the infected patient, including disease pathogenesis, diagnosis, and the use of antimicrobial therapy. The first section covers how micro-organisms spread and cause disease in humans, and how the human body responds to infection in general. The next three sections give a broad outline of the important properties of human infectious pathogens; split into viruses, bacteria, and eukaryotic organisms. The final sections cover laboratory diagnosis, antimicrobial chemotherapy, prevention strategies, and infection from the point of view of the patient.

Bioprocess Technology combines concepts and ideas from biology, engineering, materials science, and clinical processes. The industrial use of biological processes utilising living cells or their components to achieve desired substrate transformations is known as bioprocess technology. Bioprocesses provide several benefits over standard chemical processes, including the need for moderate reaction conditions, increased specificity and efficiency, and the production of renewable by-products (biomass). Bioprocesses' potential has been broadened and extended thanks to the introduction of recombinant DNA technology. Bioprocesses are now widely employed in a variety of commercial biotechnology disciplines, including the synthesis of enzymes (used in food processing and waste management, for example) and antibiotics. Bioprocesses may find applications in other sectors where chemical processes are now applied as methodologies and equipment improve. Many of biotechnology's potential applications are created through laboratory processes that yield very modest quantities of valuable chemicals. As bioprocess technology advances, particularly separation and purification techniques, commercial firms will be able to produce these substances in large quantities at a low cost, allowing them to be used in medical research, food processing, agriculture, pharmaceutical development, waste management, and a variety of other fields of science and industry.

The present book is compilation of my lecture notes on Human Physiology. This book is an outcome of an idea I got from my students, when I saw them taking print out of my lecture presentations and get them spirally bounded as book to study during whole semesters, especially examination days. The present compilation of important facts & concepts of human physiological system well supported with self-drawn suitable figures are very helpful in revising entire syllabus particularly during examination days when students are running short of time and plenty is there to study. The present book covers almost all human physiological systems starting from Body Fluids to Muscle Physiology, Cardiovascular System, Endocrine System, Nervous System, Respiratory System, Excretory System, Digestive System and Reproductive System. Every chapter is very well supported with proper illustrations, tables and ray diagrams. Altogether about 50 illustrations are included in the book to make the mechanisms/concept easiest to understand by the students. This book shall be helpful to the students of Medical (MBBS/MD/MS), Paramedical, Basic Sciences viz. Zoology & Applied Sciences viz. Biomedical Sciences, Biotechnology, Biochemistry, Microbiology, Human Physiology, Life Sciences, Biosciences, Endocrinology, Pharmacy, Home Science, etc. I thank to readers in advance for their all love given to the book. Microbiology

Why is life the way it is? Bacteria evolved into complex life just once in four billion years of life on earth-and all complex life shares many strange properties, from sex to ageing and death. If life evolved on other planets, would it be the same or completely different? In *The Vital Question*, Nick Lane radically reframes evolutionary history, putting forward a cogent solution to conundrums that have troubled scientists for decades. The answer, he argues, lies in energy: how all life on Earth lives off a voltage with the strength of a bolt of lightning. In unravelling these scientific enigmas, making sense of life's quirks, Lane's explanation provides a solution to life's vital questions: why are we as we are, and why are we here at all? This is ground-breaking science in an accessible form, in the tradition of Charles Darwin's *The Origin of Species*, Richard Dawkins' *The Selfish Gene*, and Jared Diamond's *Guns, Germs and Steel*.
