Social Media Marketing Algorithms 3 Books In 1

Social Media Marketing Algorithms Social media is a rapidly growing arena for everything from the posting of videos to car sales, so it should come as no surprise that big business is growing on there, too. However, what can it actually do to help grow your business? Before selling any product, you have to get your name out there and spread the word of your new social media presence. By adding links to your social media accounts on your company website, you are encouraging people to follow you online in order to get the most up to date information as soon as you release it. When you put your company website on your social media profile, it gives your clients a way to go directly to your website. This will allow your customers to contact your company for more information, and it is more likely to create online buyers. Social media is the main way that companies are beginning to show involvement with their customers and community by promoting events they are sponsoring or releasing news to their clients. Real-time communication has become extremely important for customer satisfaction in today's businesses. People don't want to wait for answers to their questions or for help resolving any issue they might have. Internet Infomercials 101: How to Make Online Commercials for Google Adwords Video and Internet Marketing

This book addresses the realization of pronominal subjects in Bulgarian and its implications for late near-native competence of German as a second/foreign language. Since Bulgarian is under-researched, typological investigations were carried out prior to the empirical study of L2 subject use. The book covers the adequate classification of Bulgarian, ascertaining its pro-drop nature, and explores the possible impact of related cross-linguistic differences on near-native interlanguage grammars of speakers with the language combination L1-Bulgarian/L2-German. Although German is not pro-drop, it allows null topics and requires some obligatory null expletives, so that null subject contexts superficially overlap for the two languages. This is a source of interlanguage deficits if no proper differentiation between subject types is made.

Overt and Null Subjects in Bulgarian and in L1 Bulgarian-L2 German Interlanguage

We live in an era when most litigation parties never see the inside of a courtroom. Cases are resolved by motion practice, by informal settlement, or by formal procedures such as arbitration and mediation. Rarely does an attorney get to say, "Ladies and gentlemen of the jury . . ." Does this change render deposition practice obsolete? Quite the opposite—depositions are more important than ever. Instead of a battle between attorneys who are trying to hide their evidence for trial, depositions are the place to put your best case forward, establish your case theories, explore the strengths and weaknesses of your case, and prepare your disposition strategy, be it a motion for summary judgment, a settlement offer, or mediation. Taking effective depositions in this changed environment involves a new paradigm, a whole new way of thinking about the discovery process. This book will guide you through that process, from interviewing and preparing your client through theory building and expert testimony. It also deals with concrete issues like creating a clean, understandable deposition record that will benefit your case throughout the litigation process. With its Q&A format and its many examples, The Deposition Tutorial will become the book you want on your desk for quick reference.

The Deposition Tutorial: Questions, Answers, Tactics, Demonstrations

New Approaches to the Analysis of Jihadism

Assessment has long been recognized as a key feature in learning efficacy, especially through formative evaluation. Item banking, the storage and classification of test items, is an essential part of systematic assessment. This volume is based on a NATO Advanced Research Workshop held as part of the Special Programme on Advanced Educational Technology. The workshop brought together scholars from around the world to discuss and critically analyze the issues and problems associated with Subjective Probability Measurement (SPM) or the more generic research area called self-assessment. Recent advances in computer technology (expert systems, interactive video disks, and hypermedia) along with the developing sophistication of self-assessment scoring systems based on SPM made this conference particularly important and timely. The book is divided into three main parts: - The input: item banking and hypermedia - The process: subjective probabilities - The output: teaching and learning feedbacks. In summary, although SPM is a difficult theoretical concept for most educators to comprehend, the sophisticated nature of modern computer systems coupled with comprehensive formative and summative evaluation and self-assessment systems make SPM transparent to the user.

Everyday we vicariously experience a range of states that we observe in other people: we may "feel" embarrassed when witnessing another making a social faux pas, or we may feel sadness when we see a loved one upset. In some cases this process appears to be implicit. For instance, observing pain in others may activate pain-related neural processes but without generating an overt feeling of pain. In other cases, people report a more literal, conscious sharing of affective or somatic states and this has sometimes been described as representing an extreme form of empathy. By contrast, there appear to be some people who are limited in their ability to vicariously experience the states of others. This may be the case in several psychiatric, neurodevelopmental, and personality disorders where deficits in interpersonal understanding are observed, such as schizophrenia, autism, and psychopathy. In recent decades, neuroscientists have paid significant attention to the understanding of the "social brain," and the way in which neural processes govern our understanding of other people. In this Research Topic, we wish to contribute towards this understanding and ask for the submission of manuscripts focusing broadly on the neural underpinnings of vicarious experience. This may include theoretical discussion, case studies, and empirical investigation using behavioural techniques, electrophysiology, brain stimulation, and neuroimaging in both healthy and clinical populations. Of specific interest will be the neural correlates of individual differences in traits such as empathy, how we distinguish between ourselves and other people, and the sensorimotor resonant mechanisms that may allow us to put ourselves in another's shoes.

Visualization, meaning both the perception of an object that is seen or touched and the mental imagery that is the product of that perception, is believed to be a major strategy in all thought. It is particularly important in science, which seeks causal explanations for phenomena in the world-as-experienced. Visualization must therefore play a major role in science education. This book addresses key issues concerning visualization in the teaching and learning of science at any level in educational systems. 'Visualization in Science Education' draws on the insights from cognitive psychology, science, and education, by experts from Australia, Israel, Slovenia, UK, and USA. It unites these with the practice of science education, particularly the ever-increasing use of computer-managed modelling packages, especially in chemistry. The first section explores the significance and intellectual standing of visualization. The second section shows how the skills of visualization have been developed practically in science education. This is followed by accounts of how the educational value of visualization has been integrated into university courses in physics, genomics, and geology. The fourth section documents experimental work on the classroom assessment of visualization. An endpiece summarises some of the research and development needed if the contribution of this set of universal skills is to be fully exploited at all levels and in all science subjects.
