Psychology of Liberation

Since the mid-1980s, the psychology of liberation movement has been a catalyst for collective and individual change in communities throughout Latin America, and beyond; and recent political developments are making its powerful, transformative ideas more relevant than ever before. Psychology of Liberation: Theory and Applications updates the activist frameworks developed by Ignacio Martin-Baro and Paulo Freire with compelling stories from the frontlines of conflict in the developing and developed worlds, as social science and psychological practice are allied with struggles for peace, justice, and equality. In these chapters, liberation is presented as both an ongoing process and a core dimension of wellbeing, entailing the reconstruction of social identity and the transformation of all parties involved, both oppressed and oppressors. It also expands the social consciousness of professionals, bringing more profound meaning to practice and enhancing related areas such as peace psychology, as shown in articles such as these: Philippines: the role of liberation movements in the transition to democracy. Venezuela: liberation psychology as a therapeutic intervention with street youth. South Africa: the movement for representational knowledge. Muslim world: religion, the state, and the gendering of human rights. Ireland: linking personal and political development. Australia: addressing issues of racism, identity, and immigration. Colombia: building cultures of peace from the devastation of war. Psychology of Liberation demonstrates the commitment to overcome social injustices and oppression. The book is a critical resource for social and community psychologists as well as policy analysts. It can also be used as a text for graduate courses in psychology, sociology, social work and community studies.

Liberation Practices

Liberation psychology is an approach that aims to understand wellbeing within the context of relationships of power and oppression, and the sociopolitical structure in which these relationships exist. *Liberation Practices: Towards Emotional Wellbeing Through Dialogue* explores how wellbeing can be enhanced through dialogue which challenges oppressive social, relational and cultural conditions and which can lead to individual and collective liberation. Taiwo Afuape and Gillian Hughes have brought together a variety of contributors, from a range of mental health professions and related disciplines, working in different settings, with diverse client groups. *Liberation Practices* is a product of multiple dialogues about liberation practices, and how this connects to personal and professional life experience. Contributors offer an overview of liberation theories and approaches, and through dialogue they examine liberatory practices to enhance emotional wellbeing, drawing on examples from a range of creative and innovative projects in the UK and USA. This book clearly outlines what liberation practices might look like, in the context of the historical development of liberation theory, and the current political and cultural context of working in the mental health and psychology field. *Liberation Practices* will have a broad readership, spanning clinical psychology, psychotherapy and social work.

Gandhi and the Psychology of Nonviolence, Volume 2

In volume 1 of *Gandhi and the Psychology of Nonviolence* the authors advanced a scientific psychology of nonviolence, derived from principles enunciated by Gandhi and supported by current state-of-the-art research in psychology. In this second volume the authors demonstrate its potential contribution across a wide range of applied psychology fields. As we enter the era of the Anthropocene, they argue, it is imperative to make use of Gandhi's legacy through our evolving noospheric consciousness to address the urgent problems of the 21st century. The authors examine Gandhi's contributions in the context of both established areas such as the psychology of religion, educational, community and organizational psychology and newer fields including environmental psychology and the psychology of technology. They provide a nuanced analysis which engages with both the latest research and the practical implications for initiatives like the Intergovernmental Panel on Climate Change and the UN's Sustainable Development Goals. The book concludes with an overview of Gandhi's contribution to modern psychology, which encompasses the history, development, and current impetus behind emerging work in the field as a whole. It marks an exciting contribution to studies of both Gandhi and psychology that will also provide unique insights for scholars of applied psychology, education, environmental and development studies.

Foundations of Islamic Psychology

Foundations of Islamic Psychology: From Classical Scholars to Contemporary Thinkers examines the history of Islamic psychology from the Islamic Golden age through the early 21st century, giving a thorough look into Islamic psychology's origins, Islamic philosophy and theology, and key developments in Islamic psychology. In tracing psychology from its origins in early civilisations, ancient philosophy, and religions to the modern discipline of psychology, this book integrates overarching psychological principles and ideas that have shaped the global history of Islamic psychology. It examines the legacy of psychology from an Islamic perspective, looking at the contributions of early Islamic classical scholars and contemporary psychologists, and to introduce how the history of Islamic philosophy and sciences has contributed to the development of classical and modern Islamic psychology from its founding to the present. With each chapter covering a key thinker or moment, and also covering the globalisation of psychology, the Islamisation of knowledge, and the decolonisation of psychology, the work critically evaluates the effects of the globalisation of psychology and its lasting impact on indigenous culture. This book aims to engage and inspire students taking undergraduate and graduate courses on Islamic psychology, to recognise the power of history in the academic studies of Islamic psychology, to connect history to the present and the future, and to think critically. It is also ideal reading for researchers and those undertaking continuing professional development in Islamic psychology, psychotherapy, and counselling.

Consciousness-in-Action: Toward an Integral Psychology of Liberation & Transformation

Drawing from psychology, sociology, social theory, integral theory, and years of work in communities-of-struggle, this book proposes a unique approach to personal change and social transformation. With implications for helping professionals, educators, community organizers, activists and others committed to social change, *Consciousness-in-Action* offers an integral view of well-being and development in the context of institutional and internalized oppression. Consciousness-in-action as a personal and group process is presented as a practice to liberate people from emotional and behavioral reactivity of learned superiority and inferiority based on race, gender, culture, class and other social identities, a process central to social transformation and the evolution of human consciousness.

Politically Reflective Psychotherapy

This book shows how clinical psychology has been deliberately used to label, control and oppress political dissidence under oppressive regimes and presents an epistemological and theoretical framework to help psychologists deal with the political dilemmas that surround clinical practice. Based on his own experience working as a clinical and community psychologist in Venezuela for almost twenty five years, the author recounts the controversial history of how the Bolivarian Revolution has used psychology to persecute and oppress political dissidents, recovers the experience of doing psychotherapy under oppressive regimes in other countries and stresses the importance of developing an ethically and politically aware clinical practice. The first part of the book presents the dilemmas psychotherapists have faced in different parts of the world, such as the former Soviet Union, USA, China, Spain, Hungary, Argentina, Brazil, Uruguay, and Venezuela when dealing with the intrusion of the political domain in clinical research and practice and the difficulties clinicians have had in dealing with these issues. The second part of the book presents an epistemological and theoretical framework from which these issues may be tackled effectively. The book helps raise awareness of the risks of framing psychotherapy as apolitical as well as the benefits of thinking of our lives as contextualized in our

political settings. It draws from several theoretical options that have been useful to challenge traditional clinical theory and include the political in our clinical comprehensions. In particular Latin American Community Psychology, that has developed tools to favor awareness of political issues, has been used to expand the psychotherapeutic conversation. Politically Reflective Psychotherapy: Towards a Contextualized Approach will help clinical psychologists, psychiatrists and other social and mental health workers reflect on the challenges psychotherapy faces in a politically polarized society, showing how the political dimension can be incorporated into clinical practice.

Latine Psychology Beyond Colonialism

This book examines the colonial structure as it applies to Latine populations and demonstrates how the remnants of that structure continue to affect this ethnic group. It will show that the colonial perspective is aligned with a racist viewpoint and the many ways in which this undermines psychological stability. Currently, many psychologists dealing with this population focus on individual deficits or disorders without the clarifying lens of social justice. In this way, the book will unravel the various strands of socio-political stressors and the disabling effects of lingering oppression. It will serve to bring new insights to those studying this group, as well as the many mental health workers that provide services. The result is an identification of a native psychology that is uniquely tailored to these particular individuals.

Liberation Psychology

In the Psychological Insights for Understanding COVID-19 series, international experts introduce important themes in psychological science that engage with people's unprecedented experience of the pandemic, drawing together chapters as they originally appeared before COVID-19 descended on the world. This book explores how COVID-19 has impacted society, and chapters examine a range of societal issues including leadership and politics, community, social status, welfare, social exclusion and accountability. Addressing the social and psychological processes that structure, and are structured by, our social contexts, it shows not only how groups and individuals can come together to manage global crises, but also how these crises can expose weaknesses in our society. The volume also reflects on how we can work together to rebuild society in the aftermath of the pandemic, by cultivating a shared sense of responsibility through social integration and responsible leadership. Showcasing theory and research on key topics germane to the global pandemic, the Psychological Insights for Understanding COVID-19 series offers thought-provoking reading for professionals, students, academics and policy makers concerned with the psychological consequences of COVID-19 for individuals, families and society.

Psychological Insights for Understanding COVID-19 and Society

This book claims a discursive space in academic scholarship for knowledges and ways of knowing that capture the diversity, complexity and full humanness of Australian Muslim women's subjectivities. It draws on in-depth conversational interviews with 20 Australian Muslim women from various ethnic backgrounds during which the women shared their experiences of being at the crossroads of their religious, gendered, racialised and ethnic identities. The book puts forward a decolonial feminist border methodology by weaving the work of decolonial feminist philosophers Maria Lugones and Gloria Anzaldúa with postmodern feminist thinking on subjectivity and with discourse analysis. This methodology is used to centre and attend to the fluidity and plurality of Muslim women's subjectivities, at the intersections of race, ethnicity, patriarchy, gender, sexuality and Islam.

Australian Muslim Women's Borderland Subjectivities

Understanding that the psychological well-being of individuals is inextricably linked to the health of their communities, environments, and cultures, the authors propose a radical interdisciplinary reorientation of psychology to create participatory and dialogical spaces for critical understanding and creative restoration.

Toward Psychologies of Liberation

"In your country," Ignacio Martín-Baró remarked to a North American colleague, "it's publish or perish. In ours, it's publish and perish." In November 1989 a Salvadoran death squad extinguished his eloquent voice, raised so often and so passionately against oppression in his adopted country. A Spanish-born

Jesuit priest trained in psychology at the University of Chicago, Martín-Baró devoted much of his career to making psychology speak to the community as well as to the individual. This collection of his writings, the first in English translation, clarifies Martín-Baró's importance in Latin American psychology and reveals a major force in the field of social theory. Gathering essays from an array of professional journals, this volume introduces readers to the questions and concerns that shaped Martín-Baró's thinking over several decades: the psychological dimensions of political repression, the impact of violence and trauma on child development and mental health, the use of psychology for political ends, religion as a tool of ideology, and defining the "real" and the "normal" under conditions of state-sponsored violence and oppression, among others. Though grounded in the harsh realities of civil conflict in Central America, these essays have broad relevance in a world where political and social turmoil determines the conditions of daily life for so many. In them we encounter Martín-Baró's humane, impassioned voice, reaffirming the essential connections among mental health, human rights, and the struggle against injustice. His analysis of contemporary social problems, and of the failure of the social sciences to address those problems, permits us to understand not only the substance of his contribution to social thought but also his lifelong commitment to the campesinos of El Salvador.

Liberation Psychology

This ground-breaking and innovative textbook offers a uniquely global approach to the study of social psychology. Inclusive and outward-looking, the authors consciously re-orientate the discipline of social psychology, promoting a collectivist approach. Each chapter begins with an illustrative scenario based on everyday events, from visiting a local health centre to shopping in a supermarket, which challenges readers to confront the issues that arise in today's diverse, multicultural society. This textbook also gives a voice to many indigenous psychologies that have been excluded from the mainstream discipline and provides crucial coverage of the colonization experience. By integrating core social psychology theories and concepts with critical perspectives, *Social Psychology and Everyday Life* provides a thought-provoking introduction suitable for both undergraduate and postgraduate students of social psychology and community psychology. It can also be used by students in related subjects such as sociology, criminology and other social sciences.

Writings for a Liberation Psychology

The 2nd edition of the *Oxford Handbook of Music Psychology* updates the original landmark text and provides a comprehensive review of the latest developments in this fast growing area of research. Covering both experimental and theoretical perspectives, each of the 11 sections is edited by an internationally recognised authority in the area. The first ten parts present chapters that focus on specific areas of music psychology: the origins and functions of music; music perception, responses to music; music and the brain; musical development; learning musical skills; musical performance; composition and improvisation; the role of music in everyday life; and music therapy. In each part authors critically review the literature, highlight current issues and explore possibilities for the future. The final part examines how, in recent years, the study of music psychology has broadened to include a range of other disciplines. It considers the way that research has developed in relation to technological advances, and points the direction for further development in the field. With contributions from internationally recognised experts across 55 chapters, it is an essential resource for students and researchers in psychology and musicology.

Social Psychology and Everyday Life

Drawing on the writings of diverse authors, including Jean Baker Miller, Bell Hooks, Mary Daly, Frantz Fanon, Paulo Freire and Ignacio Martín-Baró, as well as on women's experiences, this book aims to develop a 'liberation psychology'; which would aid in transforming the damaging psychological patterns associated with oppression and taking action to bring about social change. The book makes systematic links between social conditions and psychological patterns, and identifies processes such as building strengths, cultivating creativity, and developing solidarity.

The Oxford Handbook of Music Psychology

This book offers reflections on how liberation might be experienced by clients as a result of the therapeutic relationship. It explores how power and resistance might be most effectively and ethically understood and utilised in clinical practice with survivors of trauma. *Power, Resistance and Liberation in Therapy with Survivors of Trauma* draws together narrative therapy, Coordinated Management

of Meaning (CMM) and liberation psychology approaches. It critically reviews each approach and demonstrates what each contributes to the other as well as how to draw them together in a coherent way. The book presents: an original take on CMM through the lenses of power and resistance a new way of thinking about resistance in life and therapy, using the metaphor of creativity numerous case examples to support strong theory-practice links. Through the exploration of power, resistance and liberation in therapy, this book presents innovative ways of conceptualising these issues. As such it will be of interest to anyone in the mental health fields of therapy, counselling, social work or critical psychology, regardless of their preferred model. It will also appeal to those interested in a socio-political contextual analysis of complex human experience.

Gender and Colonialism

As inequality widens in all sectors of contemporary society, we must ask: is psychoanalysis too white and well-to-do to be relevant to social, economic, and racial justice struggles? Are its ideas and practices too alien for people of color? Can it help us understand why systems of oppression are so stable and how oppression becomes internalized? In *A People's History of Psychoanalysis: From Freud to Liberation Psychology*, Daniel José Gaztambide reviews the oft-forgotten history of social justice in psychoanalysis. Starting with the work of Sigmund Freud and the first generation of left-leaning psychoanalysts, Gaztambide traces a series of interrelated psychoanalytic ideas and social justice movements that culminated in the work of Frantz Fanon, Paulo Freire, and Ignacio Martín-Baró. Through this intellectual genealogy, Gaztambide presents a psychoanalytically informed theory of race, class, and internalized oppression that resulted from the intertwined efforts of psychoanalysts and racial justice advocates over the course of generations and gave rise to liberation psychology. This book is recommended for students and scholars engaged in political activism, critical pedagogy, and clinical work.

A People's History of Psychoanalysis

"How can psychology professors in the USA and other nations make their courses more international?" This question is addressed in this indispensable new sourcebook, co-authored by 73 contributors and editors from 21 countries. In recent decades psychology has evolved from an American-dominated discipline to a much more global discipline. Preliminary estimates by Zoma and Gielen (2015) suggest that approximately 76%-78% of the world's one million or so psychologists reside outside the U.S. However, most textbooks in the field continue to rely predominantly on research conducted in North America and Europe. Our book is intended to introduce psychology instructors to a variety of broad perspectives as well as specific suggestions that can support their efforts to internationalize their course offerings at both the undergraduate and graduate levels. In this way they can prepare their students to become more culturally sensitive and function more effectively as citizens and psychologists in the evolving globalized world. To achieve these ambitious goals the editors have assembled an international group of 73 distinguished contributors who, taken together, have taught and conducted research in all regions of the world. The chapters in the book include both core areas of psychology and subdisciplines that represent rapidly expanding and internationally important areas such as cross-cultural psychology and the psychology of gender. The chapters cover key topics and areas included in the course offerings of psychology departments both in the United States and in other countries. In addition to a discussion of international perspectives relevant to a given area, all chapters include an annotated bibliography of pertinent books, articles, web-related materials, films, videos, and so on. Based on this information, both highly experienced and less experienced psychology instructors can add globally and culturally oriented dimensions to their respective courses. This is important because universities, departments, and accrediting agencies increasingly put pressure on instructors to broaden and internationalize their courses. "As a long-time international psychologist myself, I see this bold new volume as a great leap forward for international psychology. The 73 distinguished contributors and editors from 21 countries have carefully crafted a handbook that will be the go-to resource on the topic for years to come. For psychology to continue to be relevant in the 21st century it must become more international; I am grateful this book will help us accomplish this challenging but rewarding goal." ~ Philip G. Zimbardo, Ph.D Past-President American Psychological Association "What could be more important than understanding human behavior and the thoughts

and emotions that underlie it? By teaching psychology to the world, we offer the possibility of using our discipline to create a better future for all of us. The chapters in this excellent book help teachers of psychology move from an ethnocentric perspective to a global way of thinking about and telling about a truly international psychology." ~ Diane F. Halpern, Ph.D Past-President of the American Psychological Association and Professor of Psychology "This is a brilliant, unprecedented collection of international scholarship that every psychology professor and student should read. The 21st century in the teaching of psychology has truly arrived with this book, creating a thoroughly needed international focus for our pedagogy." ~ Frank Farley, Ph.D, L. H. Carnell Professor, Temple University; Former President, American Psychological Association (APA), International Council of Psychologists, American Educational Research Association (AERA), and the Society for International Psychology (Division 52 of APA) "Internationalizing Teaching of Psychology contains chapters authored by eminent psychologists of diverse cultural background, inclusive of different cultural perspectives on range of topics of contemporary importance. Thus, the volume integrates research emanating from varied cultural contexts facilitating development of a truly universal psychological science. The volume is a major resource for teaching courses on Cultural/Cross-cultural /Global psychology and in enhancing internationalization of psychology." ~ Prof. Janak Pandey, University of Allahabad, India, Editor, Psychology in India: The State-of-the-Art "All involved in the training of psychologists will want to recommend this book, which thoroughly presents an international perspective on the teaching of psychology. Rich, Gielen and Takooshian consider the basic nature of psychology, at the same time emphasizing cultural differences and relating it all to real life. As expert, cross-cultural researchers, the contributors provide a much needed resource and up-to-date reference for psychologists and students, as well as for any scholar interested in our discipline around the globe." ~ Laura Hernández-Guzmán, Ph. D. Professor of Psychology, Universidad Nacional Autónoma de México, Past-President of the Mexican Psychological Society "Since the mid-twentieth century the world has become an increasingly smaller place, at least in the figurative sense. And yet, Western psychology has been slow to grasp the culturally limited scope of much of our science. Although the movement toward a more culturally inclusive psychology had its roots at least as early as the 1960s, more recent meta-analyses have shown that a large percentage of the psychological literature has represented a small percentage of the world's population. In Internationalizing the Teaching of Psychology, Grant Rich, Uwe Gielen, and Harold Takooshian are making a noteworthy effort to inform and support teachers who would move the field toward a psychology of all people. From advice about getting involved in international psychology, to stand-alone international psychology courses, to the problems of culture-bound specialized courses, these well-traveled and experienced editors have assembled a resource that psychology teachers will find both interesting and valuable." ~ Kenneth D. Keith, President, Society for the Teaching of Psychology, University of San Diego "This volume is a positive contribution to the internationalization of the psychology curriculum. Given the very large numbers of psychology undergraduate and graduate students across the world, such internationalization has significant potential to provide learners with opportunities to better understand the similarities and differences in the behavior of humans in different local, national and international contexts. Such understanding can lead to a greater appreciation of, and perhaps respect for and celebration of, these similarities and differences, thus potentially leading to actions that reduce global human suffering. This volume should become an indispensable tool for psychology educators interested in such outcomes." ~ Jacquelyn Cranney, Psychology, UNSW Sydney, Australia "This book is a necessity, given the increasing mobility of psychologists, use of technology in psychology practice, and need to regulate the psychology profession globally. The content in this book will go a long way to improve psychological literacy in our East and Central Africa region. I chaired the first ever East and Central African Regional Psychology Conference in Uganda in 2013 and am on the Board of Directors of the International Association of Applied Psychologists (IAAP), so am keenly aware that the internationalization of scientific psychology knowledge and skills is an imperative." ~ James Kagaari, Ph.D, President, Uganda Council of Psychologists "Teaching psychology in your own country—especially when it is a country as vast and diverse as the United States, where fewer than half its citizens hold a passport—makes it all too easy to give courses in which students come away with the impression that what psychological scientists have learned about behavior and mental processes at home applies equally in the rest of the world. That is not always the case, of course, and the chapters in this valuable volume serve not only to remind us of that fact, but to stimulate us to consider adjusting the content of our courses to make them, as they should be, more international in scope." ~ Douglas Bernstein, Courtesy Professor of Psychology, University of South Florida USA "Bravo to this all-star cast of international contributors for showing us how to help students appreciate both our cultural diversity and our human kinship—and for providing us with accessible articles, books, media, and online materials for teaching every area of psychology from a more international perspective." ~

David G. Myers, Hope College, co-author, *Psychology* 12th Edition and *Social Psychology*, 12th Edition "Imagine that you convened an invitation-only panel of 73 experts from around the world and asked that they guide the profession in internationalizing the teaching of psychology. This book would be the impressive result! Here's the definitive, how-to guide on adding global and cross-cultural perspectives to courses throughout the psychology curricula." ~ John C. Norcross, Ph.D, ABPP, Distinguished Professor of Psychology at University of Scranton, Adjunct Professor of Psychiatry at SUNY Upstate Medical University "In today's increasingly interconnected world, the ever-emerging importance and impact of integrating psychology into education is powerfully presented in this book. The editors – themselves outstanding experts in the field – have assembled an exceptionally impressive collection of 28 chapters by 73 expert contributors covering varied aspects of teaching psychology from an international and multicultural perspective. Educators, students, psychologists, as well as stakeholders in related disciplines will find the theories and practical guides as essential and useful resources." ~ Judy Kuriansky, PhD, United Nations NGO representative, the International Association of Applied Psychology; Department of Psychology, Columbia University Teachers College

National Library of Medicine Current Catalog

This book is a landmark in contemporary cultural psychology. Ernest Boesch's synthesis of ideas is the first comprehensive theory of culture in psychology since Wilhelm Wundt's *Völkerpsychologie* of the first decades of the twentieth century. Cultural psychology of today is an attempt to advance the program of research that was charted out by Wundt—yet at times we are carefully avoiding direct recognition of such continuity. While Wundt's experimental psychology has been hailed as the root for contemporary scientific psychology, the other side of his contribution—ethnographic analysis of folk traditions and higher psychological functions—has been largely discredited as something disconnected from the scientific realm. As an example of “soft” science—lacking the “hardness” of experimentation—it has been considered to be an esoteric hobby of the founding father of contemporary psychology. Of course that focus is profoundly wrong—the opposition “soft” versus “hard” just does not fit as a metalevel organizer of any science. Yet the rhetoric discounting the descriptive side of Wundt's psychology is merely an act of social guidance of what psychologists do—not a way of creating knowledge.

Critical Psychology

This is the first up-to-date text written specifically for the international market on psychology in the community. Written by experienced authors in the field, this text will be internationally invaluable.

The Roots of Modern Psychology and Law

This is the credo and seminal text of the movement which was later characterized as liberation theology. The book burst upon the scene in the early seventies, and was swiftly acknowledged as a pioneering and prophetic approach to theology which famously made an option for the poor, placing the exploited, the alienated, and the economically wretched at the centre of a programme where "the oppressed and maimed and blind and lame" were prioritized at the expense of those who either maintained the status quo or who abused the structures of power for their own ends. This powerful, compassionate and radical book attracted criticism for daring to mix politics and religion in so explicit a manner, but was also welcomed by those who had the capacity to see that its agenda was nothing more nor less than to give "good news to the poor".

Community Psychology

In this important, timely and deeply engaged book, Robert Reynolds traces the passionate, often turbulent, courageous and committed ways in which homosexuals told their stories. From camp to gay to the recent movement of queer, from modern to post modern.

A Theology of Liberation

How can psychologists incorporate recent insights about power, values and inequality in their work? What is the role of social justice in the practice of psychology? In this highly readable book Prilleltensky and Nelson tackle these questions and propose workable solutions. This is the first book to translate into action the principles of critical psychology. Using a value-based framework the authors propose guidelines for training and critical practice in clinical, counselling, educational, health, community, and work settings. The authors base their approach on a combination of values for the promotion of personal, interpersonal, and collective well-being. They propose a set of values consisting of self determination, caring and compassion, health, respect for diversity, participation, community support and social justice. Because of its wide coverage, the book should be of interest to students and practitioners in psychology, mental health, and to users of psychological services in most fields of practice. Doing Psychology Critically: - Translates critical psychology theory into practice - Applies to most fields of applied psychology - Is written in an accessible style & includes tables and diagrams that illustrate recommendations for practice - Follows a coherent framework - Is a useful resource for training programmes in health, clinical, counselling, educational, community, and organisational psychology ISAAC PRILLELTENSKY is Professor of Psychology and Director of the Wellness Promotion Unit at Victoria University in Melbourne. He is the author of The Morals and Politics of Psychology and co-editor of Critical Psychology: An Introduction (with Dennis Fox) and Promoting Family Wellness and Preventing Child Maltreatment (with Geoffrey Nelson and Leslea Peirson). GEOFFREY NELSON is Professor of Psychology at Wilfrid Laurier University in Canada. He has served as Editor of the Canadian Journal of Community Mental Health and is the author of Shifting the Paradigm in Community Mental Health (with John Lord and Joanna Ochocka) and co-editor of Promoting Family Wellness: Fundamentals for Thinking and Action (with Isaac Prilleltensky and Leslea Peirson).

Readers are introduced to theoretical approaches to ethnography, interviewing, narrative, discourse and psychoanalysis, with each chapter on these approaches including worked examples clearly structured around methodological stages. A case is made for new practical procedures that encourage students to question the limits of mainstream psychological research methods. Resource links guide students to theoretical debates and to ways of making these debates relevant to a psychology genuinely concerned with critical reflection and social change. The book includes numerous boxes that clearly outline:

- Key issues in the development, application and assessment of qualitative research methods
- Current debates and problems with particular qualitative methods taught in psychology
- Summaries of methodological stages and points to be aware of in the marking of practical reports in relation to specific methods
- Coverage of ethical issues, reflexivity and good report writing

Qualitative Psychology is essential reading for students of psychology and other related social sciences who want a polemical account that will also serve as a well-balanced and rigorous introduction to current debates in qualitative psychology

Charting the course of womanist theory from its genesis as Alice Walker’s African-American feminism, through Chikwenye Okonjo Ogunyemi’s African womanism and Clenora Hudson-Weems’ African womanism, to its present-day expression as a global, anti-oppressionist perspective rooted in the praxis of everyday women of color, this interdisciplinary reader traces the rich and diverse history of a quarter century of womanist thought. Featuring selections from over a dozen disciplines by top womanist scholars from around the world, plus several critiques of womanism, an extensive bibliography of womanist sources, and the first ever systematic treatment of womanist thought on its own terms, Layli Phillips has assembled a unique and groundbreaking compilation.
