Die Fluten des Sumida

Ryunosuke Akutagawa was one of Japan's great writers - author of the stories 'Rashomon' and 'In a Bamboo Grove', most famously - who lived through Japan's turbulent Taisho period of 1912 to 1926, including the devastating 1923 Earthquake, only to take his own life at the age of just thirty-five in 1927. These are the stories of Patient X in one of our iron castles. He will tell his tales to anyone with the ears and the time to listen - Inspired and informed by Akutagawa's stories, essays and letters, David Peace has fashioned a most extraordinary novel of tales. An intense, passionate, haunting paean to one writer, it also thrillingly explores the act and obsession of writing itself, and the role of the artist, both in public and private life, in times which darkly mirror our own.

Perfect for fans of coming-out yuri like *How Do We Relationship?* and masters of adult drama like Akiko Higashimura (*Princess Jellyfish*) and Takako Shimura (*Even Though We're Adults*). You know that one person you just can't forget? Not the one that got away, but the one you had, until suddenly you didn't? Maki's first love was her high school classmate, a girl named Midori. But Midori broke up with Maki at graduation, saying they were now "too old to be fooling around dating girls." Ten years later, Maki still can't get Midori off her mind, and when the two women reconnect after a chance encounter, Maki realizes that, while her feelings haven't changed, Midori has long moved on?in fact, she's engaged. Yet the more Maki hears Midori talk about her soon-to-be-husband, the more red flags she notices. And Midori has another secret, one she hasn't yet shared with Maki. Will it be the last blow to Maki's hopes that their romance might be rekindled? Or will it be the push that sets them on a new path?one they'll travel together?

Phase Diagrams of Binary Titanium Alloys

The purpose of this publication is two-fold. In the first place it is intended to review progress in the development of practical stabilising systems for a wide range of polymers and applications. A complementary and ultimately more important objective is to accommodate these practical developments within the framework of antioxidant theory, since there can be little question that further major advances in the practice of stabilisation technology will only be possible on a firm mechanistic foundation. With the continual increase in the number of commercial antioxidants and stabilisers, often functioning by mechanisms not even considered ten years ago, there is a need for a general theory which will allow the potential user to predict the performance of a particular antioxidant structure under specific practical conditions. Any such predictive tool must involve a simplified kinetic approach to inhibited oxidation and, in Chapter 1, Denisov outlines a possible mechanistic approach with the potential to predict the most useful antioxidant to use and the limits of its usefulness. In Chapter 2, Schwetlick reviews the current state of knowledge on the antioxidant mechanisms of the phosphite esters with particular emphasis on their catalytic peroxidolytic activity. Dithiophosphate and vi PREFACE derivatives show a similar behaviour but for quite different reasons and, in Chapter 3, Al-Malaika reviews information available from analytical studies, particularly using ^{31}P -NMR spectroscopy, to elucidate the complex chemistry that leads to the formation of the antioxidant-active agents.
