In *Designing Your Perfect Dental Practice: Foundations of Clinical Success*, Dr. Jay M. Hislop, D.D.S., provides the design by which today's fee-for-service dentist can create their own perfect dental practice In 17 chapters (including 26 standard operating procedures) directed at both the general dentist and specialist, this book shows how today's dentist can design their own future, establish a philosophy to make it come true, then translate that philosophy into practical, usable business management solutions. The result is an easy-to-read, straightforward guide equally as valuable for the recent graduate as the veteran looking to put their practice into prime, resalable form. Hislop involves the reader by telling the fictitious story of a fellow dentist, Steve, who is simply overwhelmed and seeing his practice and life approaching toward a crisis point. Steve is skillfully interwoven into the nonfiction material, adding insight and some levity to the excellent text. What other benefits can result from applying Hislop's guidelines? More efficient operations, better patient outcomes, higher profits, reduction in malpractice

risk, true quality control on referrals, clear communication between doctors and their staff, better staff relations, faster patient service, better patient compliance and retention, outstanding practice growth, peace of mind that the practice philosophy is understood and followed, no patients "lost to recall" or "lost to referral," an environment with which managed care can't compete, and increased referrals for specialists. The \$50 digital book is a great Christmas gift for a fellow dentist.

Employee Manual This is the new employee handbook we have developed for use and modification. We have taken this template and expanded it for each of the practice locations. If you would like this in a MS Word format for modification please let us know or locate it on the website (DentalPracticeResource-Group.com). The terms used to identify a practice, dentist and employee were purposely left generic to allow this manual to stand alone as is without significant modification or to serve as a working template to create a unique manual customized for any practice needs. Why reinvent the wheel? If your office does not have such a manual or you are just starting your very first practice or perhaps opening a new office, Dental Practice Resource Group has the resources and tools to make your life easier. Please review the details contained within this document, as certain aspects will require change: office hours, time off, paid CE, etc. Look for our other manuals on common office issues such as: OSHA, Radiation Safety, Exposure to blood and body fluids and more. Wishing you the best, The Team at Dental Practice Resource Group

Standard Specialized Standard Operating Procedures for Endodontists

The main purpose of this book is to provide clear, straightforward information about the key requirements relating to health and safety in dental practices, with a practical and user-friendly approach to help manage these issues on a day-to-day basis. It assists practice managers, dentists, dental nurses and other team members in making health and safety 'second nature' by integrating it into their usual routine - thereby preventing accidents, addressing unacceptable working practices, and maintaining professional standards in order to ensure, so far as is reasonable, the protection of employees and patients. The book offers comprehensive coverage of all major topics, from the handling of hazardous substances to the management of medical emergencies. Each chapter includes: A tab for ease of reference A bulleted list outlining the scope of the chapter A list of figures An introduction to the subject and its relevance to the dental practice A list of key legislation relating to the subject The subject content broken down into sub-headings A summary to help reflection and recollection An action check list to measure against existing working practices frequently asked questions to assist in practical application Each topic is covered with specific reference to dental practice needs, with all the necessary detail but

no excessive technicality. Ultimately, this book shows how a healthy and safe workplace is eminently achievable.

Standard Specialized Standard Operating Procedures for Orthodontists

This book is designed to meet the needs of both dental students and dentists by providing succinct and quickly retrievable answers to common dental questions. Students will find both that it clearly presents the particulars which should be familiar to every dentist and that it enables them to see the big picture and contextualize information introduced to them in the future. Practicing dentists, on the other hand, will employ the book as a daily reference to source information on important topics, materials, techniques, and conditions. The book is neither discipline nor specialty specific. The first part is wide ranging and covers the essentials of dental practice while the second part addresses individual specialties and the third is devoted to emergency dental treatment. Whether as a handy resource in the student's backpack or as a readily available tool on the office desk, this reference manual fills an important gap in the dental literature.

Dental Office Employee Manual

It is jointly written by nurses and consultants in the area of maxillofacial surgery, and combines elements of nursing care with medical and surgical information. It provides an attractive alternative to the heavier medical tomes that nurses have come to rely upon.

Using the Learner Driver's Logbook you can use the charts to mark off and monitor your progress in each area of the driving test syllabus. Included with each competence area are helpful tips and reminders, and Highway Code references. The Official Driving Manual

Are you training to be a DVSA Approved Driving Instructor and confused by the amount of resources there are out there. This book has been written by me, Kathleen Kirkland, to assist those taking their part three exam. It is written with each pre set test in a role-play scenario. People learn by four different methods; visual, audio, reading or kinaesthetic or a mixture of several. This book will assist those that learn by reading or a mixture of several methods. It can supplement other learning resources that you have already. I feel the role play scenarios, give a foundation of understanding useful for you to comprehend how a lesson is structured and how the phase one and phase two differ significantly. Also within the lessons plans are the timing that should be spent on the briefing, question and answers and practice of each lesson. PDI's that have been training with my school for many years have been using these PST dialogues and have found them extremely helpful. This is the reason why I have decided to start selling the book on the open market for other PDI's to benefit. The lessons are set out in the pre-set test (PST) order; there are ten PST's in total. Each divided into two lesson plans. Phase one is for a beginner or partly trained learner and phase two for a trained learner. Each PST lesson is labelled (a) for phase one and (b) for phase two, for example: Lesson 1a - Controls and the main driving aids of the car. Lesson 1b - Crossroads. The lesson plans have been written with a full dialogue for each topic. The lessons do not need to be read as a script, they should be adjusted with your own terminology and characteristics. Notes for you, the Instructor are shown in *Italic*. These notes are to give you guidance on the particular point in the PST. For each PST there is a note for which rule of The Highway Code and lesson diagram to use in conjunction with the lesson. The lesson diagrams that I use are the 'colour file professional lesson diagram, produced by the DIA (Driving Instructors Association)'. The colour file professional's and other training resources are available to purchase from my website www.kathleensom.co.uk. You can of course use any lesson diagrams you so choose, although you will need to work out yourself, which diagrams are to be used with each PST.

The Ultimate Driving Guide Book

Introducing Virtual Driving School... Manual plus Online Video Library. This manual, combined with the online videos, covers nearly everything you need to know about how to get your driving right... so you can be fully prepared to tackle the driving test with ability and confidence. Here's a sneak peek at what you'll discover inside: The Basics of Car Control: For those of you who have never sat in the driving seat before, I'm going to start from the very beginning... the car controls. Then I'll explain, and literally show you, how to pull away, change gear, park and steer. I'll cover each of these essential skills step-by-step and demonstrate exactly what to do and how to do it. Dealing with Basic Junctions: A basic junction is a T-Junction. It's the simplest way to get from one road into another and forms the basis of all driving skills. In this section I'll show you how to emerge from and enter side-roads safely and correctly. The simple routine I'll demonstrate will be used for all other junctions you see, no matter how complicated they appear. Dealing with Roundabouts: Although roundabouts can seem intimidating and often very busy, the way to deal with them effectively is to stick to the basics! In this section I'll not only explain what I mean by that... I'll show you. Roundabouts DO NOT have to be scary, in fact after using my simple methods, my own pupils don't see roundabouts any differently to the other simple junctions... and that's how it should be. Dealing with Traffic Light Controlled junctions: No matter how well a junction was designed, as soon as you put too many cars in the picture it stops working. That is why traffic lights were invented... They make difficult junctions easy. In this section I'll prove to you how easy it can be to drive through traffic light controlled junctions... no matter how busy the roads get. Dealing with Everyday Hazards: Hazard perception is a big part of learning to drive these days. You need to pass your hazard perception test along with your theory test before you can even attempt a practical driving test. But does passing the 'virtual' test mean you know how to deal with a hazard once you've spotted it? In this section I'll demonstrate a simple technique for dealing with almost ANY road and traffic hazard effectively... and I'll give you lots of examples. Dealing with Multiple Lanes and Higher Speeds: Most learners are a little nervous about driving at high speed, and with good reason. Your reactions need to be quick when your car is travelling at 70mph and your nerves need to be steady. This section shows you what to expect and how to cope with the very different driving experience offered by fast dual-carriageways. I'll cover slip roads, multiple lane roundabouts and overtaking procedures. I hope to show you that the right

preparation and approach to high speed driving can give you the confidence to stay safe and enjoy the experience. Driving Test Manoeuvres: The final section dispels the myths about those dreaded set piece manoeuvres. You know... The three-point-turn, reversing around corners, parallel parking, bay parking and the emergency stop. I am so tired of hearing pupils say they 'can't reverse' or 'can't park'. Why not? My guess is they haven't been taught by example, or had the steering technique properly explained to them. OK some will still struggle, but I GUARANTEE by watching these examples a few times over you will find the process of learning to drive easier... or your money back.

It contains full briefings, talkthrough routines, carefully constructed ask questions. There are fault assessment on all the main examination subjects. If you are one of the growing number of candidates for the instructional ability test and check test where English is a second language, then you will find this manual particularly valuable. There are sections covering the core competencies (fault assessment) - the identification, analysis and rectification (remedy) of faults - which is an area that so many potential and approved driving instructors find the most difficult, question and answer technique, and check test preparation.

Virtual Driving School

With the exception of modern warfare, no other human activity has destroyed as many lives as driving a motor vehicle. Traffic crashes kill and injure thousands of Canadians every year at an incalculable financial and emotional cost to society—but rather than rush to stem this tide of human carnage, policy-makers seem to accept the ghastly toll as the price we pay for mobility. Driving Lessons takes a fresh look at the complexities of the road transportation system in depth, going far beyond the symptomatic, linear, reductionist approach. It challenges current traffic safety paradigms that simply blame the driver or target "villains and scapegoats" like impaired or high-risk drivers. It takes issue with road transportation system management that sometimes puts mobility ahead of the safety of road users. As one researcher notes, human beings will make mistakes, and accordingly, "the road transportation system must be designed so that people's mistakes do not have disastrous consequences."

The driving instructor's training manual

Research on driver behaviour has clearly demonstrated that the goals and motivations a driver brings to the driving task are important determinants for driver behaviour. The objective of the book, and of the conference on which it is based, is to describe and discuss recent advances in the study of driving behaviour and driver training. It bridges the gap between practitioners in road safety, and theoreticians investigating driving behaviour, from a number of different perspectives and related disciplines. The book is timely in its aim of defining new approaches to driver training methodology based on decades of empirical research on driver behaviour. The contributing road safety researchers and professionals consider the kinds of methods that are effective in teaching drivers the higher-level skills needed to be a safe competent driver. The readership includes road safety researchers from a variety of different academic backgrounds, senior practitioners in the field from regulatory authorities and professional driver training organisations such as the police service, and private and public sector personnel who are concerned with improving road safety.
