Banking Law in Theory and Practice (A Comparative Study of English and Indian Law of Banking)

Islamic finance has started to grow in international finance across the globe, with some concentration in few countries. Nearly 20 percent annual growth of Islamic finance in recent years seems to point to its resilience and broad appeal, partly owing to principles that govern Islamic financial activities, including equity, participation, and ownership. In theory, Islamic finance is resilient to shocks because of its emphasis on risk sharing, limits on excessive risk taking, and strong link to real activities. Empirical evidence on the stability of Islamic banks, however, is so far mixed. While these banks face similar risks as conventional banks do, they are also exposed to idiosyncratic risks, necessitating a tailoring of current risk management practices. The macroeconomic policy implications of the rapid expansion of Islamic finance are far reaching and need careful considerations.

Using a central bank legislation database, this paper documents and analyzes worldwide institutional arrangements for central bank lending to the government and identifies international practices. Key findings are: (i) in most advanced countries, central banks do not finance government expenditure; (ii) in a large number of emerging and developing countries, short-term financing is allowed in order to smooth out tax revenue fluctuations; (iii) in most countries, the terms and conditions of these loans are typically established by law, such that the amount is capped at a small proportion of annual government revenues, loans are priced at market interest rates, and their maturity falls within the same fiscal year; and (iv) in the vast majority of countries, financing other areas of the state, such as provincial governments and public enterprises, is not allowed. The paper does not address central banks' financial support during financial crises.

Advancing legal scholarship in the area of mixed legal systems, as well as comparative law more generally, this book expands the comparative study of the world's legal families to those of jurisdictions containing not only mixtures of common and civil law, but also to those mixing Islamic and/or traditional legal systems with those derived from common and/or civil law traditions. With contributions from leading experts in their fields, the book takes us far beyond the usual focus of comparative law with analysis of a broad range of countries, including relatively neglected and under-researched areas. The discussion is situated within the broader context of the ongoing development and evolution of mixed legal systems against the continuing tides of globalization on the one hand, and on the other hand the emergence of Islamic governments in some parts of the Middle East, the calls for a legal status for Islamic law in some European countries, and the increasing focus on traditional and customary norms of governance in post-colonial contexts. This book will be an invaluable source for students and researchers working in the areas of comparative law, legal pluralism, the evolution of mixed legal systems, and the impact of colonialism on contemporary legal systems. It will also be an important resource for policy-makers and analysts.
