Nine More Clinical Cases

Anton T. Boisen, who started the clinical pastoral movement, believed that carefully reviewing cases of actual patients is the only effective way to train chaplains. But what distinguishes clinical chaplaincy in the tradition of Boisen from the work of other religious or spiritual practitioners who might lay claim to the title "chaplain"? Responding to a second volume of cases published by George Fitchett and Steve Nolan, the distinguished CPE supervisor Raymond J. Lawrence provides alternative approaches to each case, ones that penetrate more deeply into the heart and soul of the patient, offering a more compassionate and meaningful sort of chaplaincy. Like its predecessor volume, *Nine Clinical Cases: The Soul of Pastoral Care & Counseling*, this book is intended for those who want to move from a service delivery and "prayer warrior" form of chaplaincy to one that is more psychodynamically based. It is also intended for those who train chaplains and aspire to doing so better.

Nine Clinical Cases:

This book is actually an expanded review of the Fitchett-Nolan book and its thesis. For each of the nine cases and for each of the three associated critiques, I have provided a summary. Following that, I add my own critique of each case itself and of each associated critique. Following that is a summary and critique of the chapter on ethical concerns by David B. McCurdy. Finally, I set the entire book in the context of the clinical pastoral training tradition. Most of the published work on clinical pastoral supervision seems to have focused on principles and theory. The value of the Fitchett-Nolan work is that it is based on specific clinical cases, the nine cases that are published in the book itself. I hope they will have set the standard for future publications. Theory is useful, but nothing is quite as useful nor quite as engrossing as a specific clinical case. Fitchett, in his introduction to the book, argues for more published cases in the clinical pastoral training field. The current paucity of published clinical cases is actually puzzling in that the movement itself began a century ago with the study of cases. The founder of clinical pastoral training, Anton Boisen, actually made himself and his personal troubles the

principal "case." Therefore, I second Fitchett's call for more published cases in the field as the best route for learning the art and science of pastoral care, counseling, and psychotherapy. The work that follows is a running commentary on the 9 cases as well as the 27 commentaries on the cases and on the summary essay, "Ethical Issues in Case Study Publication." In addition to the two editors, six additional persons appear as critics of some of the cases. For better or for worse, I have commented on each and every one. I have elected throughout not to name the specific chaplains whose work is included herein. I am not thereby keeping a confidence. Their names and current positions are clearly identified in the Fitchett-Nolan book itself. But I am electing not to expose them further. I prefer to grant them what meager privacy yet available to them, which is not much. I actually feel some admiration for the nine who put their clinical pastoral work on view for all the world to see-and to pick apart. It is a very courageous choice to put one's work in the public arena for scrutiny. It is also potentially hurtful, particularly if one has thin skin, and, more so, if one has enemies eager to enter the fray for purposes of devaluation. No one is without flaws. No professional works without missteps. And no one is immune to certain blindnesses. But few would choose to lay their flaws and missteps open to public scrutiny. We have to applaud the courage of these presenting chaplains and pastoral counselors who have laid their professional work open to public examination in this book. They have my admiration and my esteem. But, as the reader will see, I have not elected to coddle or to consider the feelings of the presenters of the nine cases published here. I am assuming that they are professionals prepared to receive straightforward critique of their work. Nor do I spare their published critics. Nor do I myself expect to be spared strong rebuttal, particularly in instances where I might have been wrong or uninformed.

Recovery of Soul

The clinical pastoral movement in the 20th century changed the face of American religion. Written from an insider's point of view, the movement's development is candidly presented in this monograph. The book offers a fresh account of the complex beginnings of contemporary clinical chaplaincy and pastoral counseling rooted in one clergyman's psychosis and his emergence from it, Freud and the development of psychoanalytic theory, and the various and contradictory ways that religion in America responded. Author Raymond J. Lawrence pulls no punches in his chronicle of the movement in its many aspects, from the sordid to the transformative and all that is in-between. From the life and work of founder Anton T. Boisen and his principal collaborator Helen Flanders Dunbar, to key figures such as Wayne Oates, Myron Maddon, Joan Hemenway and Donald Capps, Lawrence provides not just a history but also a revealing memoir of his own 50 years' experience that amount to a "complex, accursed, and redemptive story" of the clinical pastoral care movement.

Bursting the Bubble

He was known around the world as the "Bubble Boy". Now told for the first time by the person who was his caretaker and confidant, *Bursting the Bubble* is the heart-rending story of the life and death of David Vetter. Due to the scientific zeal of doctors and religious authorities, and the compliance of his trusting family, he lived his life in a sterile chamber bereft of human touch from birth until a few days before his death at age 12 and a half. Mary Ada Murphy, Ph.D., was a child psychologist on staff at St. Luke's-Texas Children's Hospital throughout David Vetter's life and became his closest friend and confidant. She was with him when he died. She received the Hadassah Myrtle Wreath Award in 1985 in recognition of her outstanding achievement in the psychological support of David Vetter and his family. Raymond J. Lawrence, whom Murphy entrusted with the *Bursting the Bubble* manuscript and writes an introduction to it, was the hospital chaplain in place during David's early years, and who convened the only formal ethics consultation on the Vetter case.

Is God Still at the Bedside?

Is God Still at the Bedside? by Abigail Rian Evans offers an expert interdisciplinary Christian perspective on the complex web of issues surrounding death and dying. Evans here combines first-person stories and interviews with research gathered from the medical, theological, legal, ethical, and pastoral disciplines. Her comprehensive, insightful work will not only benefit families struggling with difficult end-of-life decisions but also inform the doctors, nurses, and pastors who serve them. Book jacket.

Sport, Media and Mega-Events

Bringing together many of the most influential scholars in sport and media studies, this book examines the diverse ways that media influences our understanding of the world's most important sport events, dubbed sports mega-events. It sheds new light on how these events have been changed by the media, and have, in turn, adapted to media to further their brand's cultural influence. Focusing on the central concept of "mediatization" – the permeation of media into all spheres of contemporary life – the book presents original case studies of major events including the Olympics, FIFA, rugby and cricket World Cups, Tour de France, Super Bowl, World Series, Monaco Grand Prix, Wimbledon, and many more. Written from a truly international perspective, this is a seminal work in sport and media studies that reveals the growing political, economic, and cultural influences of sport mega-events in contemporary society. Sport, Media and Mega-Events is an essential text for any course on the sociology of sport, event management, sport marketing, or featuring a cultural, communication or media studies approach to sport.

Case Studies in Spiritual Care

Through a rich variety of case studies, this book provides insight into the patient's needs and the chaplain's perspective, as well as discussions of spiritual assessments and spiritual care interventions. Case studies such as a request to baptise a child complicated due to his admission for 'psychiatric reasons', as well as work with military veterans, such as a female transgender veteran who has been alienated from her faith, show the breadth and complexity of work that chaplains undertake daily. Each section also includes critical responses to the case studies presented from a chaplain and related healthcare professional. This book will enable chaplains to critically reflect on the spiritual care they provide, and provide an informed perspective for healthcare professionals and others involved in chaplaincy services.

Spiritual Care in Practice

These diverse case studies make a compelling case for the importance of effective spiritual care in healthcare and provide unprecedented insight into the essential role of the chaplain within the healthcare team. Presented alongside critical reflections and responses from professionals within chaplaincy, psychology, psychiatry and nursing, they provide an honest and detailed look into how healthcare chaplains actually work with the people in their care and reveal the vital role of narrative and imagination in effective transformative practice. From a 16-year-old with a belief that God would enable a miraculous recovery from paralysis, to an African man with a history of psychosis and depression whose cultural belief in witches complicated his treatment, to a dying Jewish man, aggressive and isolated due to his traumatic life experiences, each case includes insight into the patient's needs and chaplain's perspectives, discussion of spiritual assessments and spiritual care interventions, and accounts of significant encounters and dialogues. The nine paediatric, psychiatric and palliative case studies and reflections in this ground-breaking book will enable chaplains to critically reflect on the spiritual care they provide and communicate their work more effectively, help healthcare professionals develop a clearer understanding of the care chaplains deliver, and provide an informed perspective for those who develop policy around spiritual care and need to make the case for chaplaincy services.

Transference and Countertransference

This book presents a classic examination of transference phenomena and focuses on the development of psychoanalytic technique and theory. It addresses a perceived gap between psychoanalytic knowledge and its capacity to effect psychological transformation in a patient.

The Financial Crisis Inquiry Report

The Financial Crisis Inquiry Report, published by the U.S. Government and the Financial Crisis Inquiry Commission in early 2011, is the official government report on the United States financial collapse and the review of major financial institutions that bankrupted and failed, or would have without help from the government. The commission and the report were implemented after Congress passed an act in 2009 to review and prevent fraudulent activity. The report details, among other things, the periods before, during, and after the crisis, what led up to it, and analyses of subprime mortgage lending, credit expansion and banking policies, the collapse of companies like Fannie Mae and Freddie Mac, and the federal bailouts of Lehman and AIG. It also discusses the aftermath of the fallout and our current state. This report should be of interest to anyone concerned about the financial situation in the U.S. and around the world. THE FINANCIAL CRISIS INQUIRY COMMISSION is an independent, bi-partisan, government-appointed panel of 10 people that was created to "examine the causes, domestic and global, of the current financial and economic crisis in the United States." It was established as part of the Fraud Enforcement and Recovery Act of 2009. The commission consisted of private citizens with expertise in economics and finance, banking, housing, market regulation, and consumer protection. They examined and reported on "the collapse of major financial institutions that failed or would have failed if not for exceptional assistance from the government." Acute Rheumatic Fever and Rheumatic Heart Disease is a concise, yet comprehensive, clinical resource highlighting must-know information on rheumatic heart disease and acute rheumatic fever from a global perspective. Covering the major issues dominating the field, this practical resource presents sufficient detail for a deep and thorough understanding of the latest treatment options, potential complications, and disease management strategies to improve patient outcomes. Divided into four distinct sections for ease of navigation: Acute Rheumatic Fever, Rheumatic Heart Disease, Population-Based Strategies for Disease Control, and Acute and Emergency Presentations. International editors and chapter authors ensure a truly global perspective. Covers all clinical aspects, including epidemiology, pathophysiology, clinical features, diagnosis, management, and treatment. Includes key topics on population-based measures for disease control for effective primary, secondary, and tertiary prevention. Consolidates today's available information and guidance into a single, convenient resource.

Acute Rheumatic Fever and Rheumatic Heart Disease

In a hierarchy, every employee rises to the level of their own incompetence. This simple maxim, defined by this classic book over 40 years ago, has become a beacon of truth in the world of work. From the civil service to multinational companies to hospital management, it explains why things constantly go wrong: promotion up a hierarchy inevitably leads to over-promotion and incompetence. Through barbed

anecdotes and wry humour the authors define the problem and show how anyone, whether at the top or bottom of the career ladder, can avoid its pitfalls. Or, indeed, avoid promotion entirely!

The Peter Principle

Scores of talented and dedicated people serve the forensic science community, performing vitally important work. However, they are often constrained by lack of adequate resources, sound policies, and national support. It is clear that change and advancements, both systematic and scientific, are needed in a number of forensic science disciplines to ensure the reliability of work, establish enforceable standards, and promote best practices with consistent application. *Strengthening Forensic Science in the United States: A Path Forward* provides a detailed plan for addressing these needs and suggests the creation of a new government entity, the National Institute of Forensic Science, to establish and enforce standards within the forensic science community. The benefits of improving and regulating the forensic science disciplines are clear: assisting law enforcement officials, enhancing homeland security, and reducing the risk of wrongful conviction and exoneration. *Strengthening Forensic Science in the United States* gives a full account of what is needed to advance the forensic science disciplines, including upgrading of systems and organizational structures, better training, widespread adoption of uniform and enforceable best practices, and mandatory certification and accreditation programs. While this book provides an essential call-to-action for congress and policy makers, it also serves as a vital tool for law enforcement agencies, criminal prosecutors and attorneys, and forensic science educators.

Strengthening Forensic Science in the United States

Abstract: We hope that we have presented information in a way that is accessible to clinicians, laypersons, and . . . other people who have experienced trauma. We have also tried to summarize a far-flung literature and describe a way of understanding the process of growth that will encourage more attention from researchers. In addition, we believe that this book can be used as a supplementary text in courses on human development, crisis intervention, and introductory courses in counseling and psychotherapy. It is also our hope that this book will be useful as a resource for helping professionals in a variety of disciplines, including psychology, social work, psychiatry, family counseling, human services, nursing, and sociology. Trauma and Transformation

This report considers the biological and behavioral mechanisms that may underlie the pathogenicity of tobacco smoke. Many Surgeon General's reports have considered research findings on mechanisms in assessing the biological plausibility of associations observed in epidemiologic studies. Mechanisms of disease are important because they may provide plausibility, which is one of the guideline criteria for assessing evidence on causation. This report specifically reviews the evidence on the potential mechanisms by which smoking causes diseases and considers whether a mechanism is likely to be operative in the production of human disease by tobacco smoke. This evidence is relevant to understanding how smoking causes disease, to identifying those who may be particularly susceptible, and to assessing the potential risks of tobacco products.

Tourists come to Bangkok for many reasons: a night of love, a stay in a luxury hotel, or simply to disappear for a while. Lawrence Osborne comes for the cheap dentistry, and then stays when he finds he can live off just a few dollars a day. Osborne's Bangkok is a vibrant, instinctual city full of contradictions. He wanders the streets, dining on insects, trawling through forgotten neighbourhoods, decayed temples and sleazy bars. Far more than a travel book, *Bangkok Days* explores both the little-known, extraordinary city and the lives of a handful of doomed ex-patriates living there, 'as vivid a set of liars and losers as was ever invented by Graham Greene' (New York Times).

How Tobacco Smoke Causes Disease

Drawing on psychological, theological, and cultural studies on suffering, Carrie Doehring encourages counselors to view their ministry through trifocal lenses and include approaches that are premodern (apprehending God through religious rituals), modern (consulting rational and empirical sources), and postmodern (acknowledging the contextual nature of knowledge). Utilizing strategies from all three perspectives, Doehring describes the basic ingredients of a caregiving relationship, shows how to use the caregiver's life experience as a source of authority, and demonstrates how to develop the skill of listening and establish the actual relationship. She then explains the steps of psychological assessment, systemic assessment, and theological reflection, and finally she delineates the basic steps for plans of care: attending to the careseeker's safety, building trust, mourning losses, and reconnecting with the ordinariness of life.

The use of case studies to build and test theories in political science and the other social sciences has increased in recent years. Many scholars have argued that the social sciences rely too heavily on quantitative research and formal models and have attempted to develop and refine rigorous methods for using case studies. This text presents a comprehensive analysis of research methods using case studies and examines the place of case studies in social science methodology. It argues that case studies, statistical methods, and formal models are complementary rather than competitive. The book explains how to design case study research that will produce results useful to policymakers and emphasizes the importance of developing policy-relevant theories. It offers three major contributions to case study methodology: an emphasis on the importance of within-case analysis, a detailed discussion of process tracing, and development of the concept of typological theories. *Case Studies and Theory Development in the Social Sciences* will be particularly useful to graduate students and scholars in social science methodology and the philosophy of science, as well as to those designing new research projects, and will contribute greatly to the broader debate about scientific methods.

Principles and Practice of Stereotactic Radiosurgery, Second Edition serves as the definitive reference textbook for SRS practitioners. It provides a theoretical basis for the use of therapeutic radiation including imaging techniques and radiobiology. The bulk of the textbook contains chapters that are comprehensive in scope on all diseases that are treated by SRS. Lastly, it addresses administrative and technical aspects of running an SRS unit. Each chapter provides an expansive treatment of the subject, with emphasis placed on the technical aspects of SRS so that practitioners in this field can use it as a daily reference. Written by noted experts in the field, Principles and Practice of Stereotactic Radiosurgery, Second Edition is the only reference needed for neurosurgeons, radiation oncologists and medical physicists at all levels of training and practice who are interested in SRS.

Hospital Ethics

Fractured Minds introduces the reader to clinical neuropsychology through vivid case descriptions of adults who have suffered brain damage. At one level, this is a book about the courage, humor, and determination to triumph over illness and disability that many "ordinary people" demonstrate when coping with the extraordinary stress of a brain disorder. On another level, it is a well-referenced and up-to-date textbook that provides a holistic view of the practice of clinical neuropsychology. Included are reader-friendly descriptions and explanations of a wide range of neurological disorders and neuroscientific concepts. Two introductory chapters are followed by 17 chapters that each focus on a specific disorder and include research, clinical assessment, rehabilitation, and a detailed case study. Disorders range across the full spectrum from common ones such as traumatic brain injury and dementia, to rare disorders such as autotopagnosia. Each of the 16 chapters retained from the first edition has been revised to reflect current research and clinical advances. Three new chapters on multiple sclerosis, Parkinson's disease, and Huntington's disease incorporate discussion of important current topics such as genetically-transmitted diseases, genetic counseling, gene transplantation, functional neurosurgery, and the complex ethical issues that go hand-in-hand with these new techniques. This informative and engaging book will be of interest to students of clinical psychology, neuropsychology, and neurology, health professionals who work with neurological patients, neurological patients and their families, and lay readers who are simply fascinated by the mind and brain.

Pediatric Surgery, 2-Volume Set

Bridging the fields of conservation, art history, and museum curating, this volume contains the principal papers from an international symposium titled "Historical Painting Techniques, Materials, and Studio Practice" at the University of Leiden in Amsterdam, Netherlands, from June 26 to 29, 1995. The symposium—designed for art historians, conservators, conservation scientists, and museum curators worldwide—was organized by the Department of Art History at the University of Leiden and the Art History Department of the Central Research Laboratory for Objects of Art and Science in Amsterdam. Twenty-five contributors representing museums and conservation institutions throughout the world provide recent research on historical painting techniques, including wall painting and polychrome sculpture. Topics cover the latest art historical research and scientific analyses of original techniques and materials, as well as historical sources, such as medieval treatises and descriptions of painting techniques in historical literature. Chapters include the painting methods of Rembrandt and Vermeer, Dutch 17th-century landscape painting, wall paintings in English churches, Chinese paintings on paper and canvas, and Tibetan thangkas. Color plates and black-and-white photographs illustrate works from the Middle Ages to the 20th century.

The Practice of Pastoral Care

An "extraordinary" (Nylon) firsthand account of the creation of a modern cult and the costs paid by its young victims: a group of college roommates "Intense . . . [a tale] of hard-won survival, and creating a life after the unimaginable."—Salon The inspiration for the Hulu docuseries Stolen Youth, directed by Zach Heinzerling and co-produced by Daniel Barban Levin In September 2010, at the beginning of the academic year at Sarah Lawrence College, a sophomore named Talia Ray asked her roommates if her father could stay with them for a while. No one objected. Her father, Larry Ray, was just released from prison, having spent three years behind bars after a conviction during a bitter custody dispute. Larry

Ray arrived at the dorm, a communal house called Slonim Woods 9, and stayed for the whole year. Over the course of innumerable counseling sessions and “family meetings,” the intense and forceful Ray convinced his daughter’s friends that he alone could help them “achieve clarity.” Eventually, Ray and the students moved into a small Manhattan apartment, beginning years of manipulation and abuse, as Ray tightened his control over his young charges through blackmail, extortion, and ritualized humiliation. After a decade of secrecy, Larry Ray was finally indicted on charges of extortion, sex trafficking, forced labor, and money laundering. Daniel Barban Levin was one of the original residents of Slonim Woods 9. Beginning the moment Daniel set foot on Sarah Lawrence’s idyllic campus and spanning the two years he spent in the grip of a megalomaniac, this brave, lyrical, and redemptive memoir reveals how a group of friends were led from college to a cult without the world even noticing.

Why Things Go Wrong, Or, The Peter Principle Revisited

Induced After Death Communication (IADC) is a therapy for grief and trauma that has helped thousands of people come to terms with their loss by allowing them the experience of private communication with their departed loved ones. This is the definitive book on the subject. Botkin, a clinical psychologist, created the therapy while counseling Vietnam veterans in his work at a Chicago area VA hospital. Botkin recounts his initial—accidental—discovery of IADC during therapy sessions with Sam, a Vietnam vet haunted by the memory of a Vietnamese girl he couldn’t save. During the session, quite unexpectedly, Sam saw a vision of the girl’s spirit, who told him everything was okay; she was at peace now. This single moment surpassed months—years—of therapy, and allowed Sam to reconnect with his family. Since that 1995 discovery, Botkin has used IADC to successfully treat countless patients—the book includes dozens of case examples—and has taught the procedure to therapists around the country.
