When human remains are discovered on an archaeological site...

Once excavated, they are transported to a lab for further study...

here they are washed and the bones of each individual are laid out

Next the bones are analysed and measured

Certain bones provide a great deal of information about the individual...

The teeth, for example, help tell how old the individual was when they died...

By studying archaeological human remains...

their health, their diet, what kind of work they might have done...
