## Assisted Reproductive Technologies in the Third Phase

Following the birth of the first “test-tube baby” in 1978, Assisted Reproductive Technologies became available to a small number of people in high-income countries able to afford the cost of private treatment, a period seen as the “First Phase” of ARTs. In the “Second Phase,” these treatments became increasingly available to cosmopolitan global elites. Today, this picture is changing — albeit slowly and unevenly — as ARTs are becoming more widely available. While, for many, accessing infertility treatments remains a dream, these are beginning to be viewed as a standard part of reproductive healthcare and family planning. This volume highlights this “Third Phase” — the opening up of ARTs to new constituencies in terms of ethnicity, geography, education, and class.

## The Art & Science of Assisted Reproductive Techniques (ART)

This second edition has been extensively revised to bring clinicians fully up to date with the latest technologies and advances in the field of assisted reproductive techniques (ART). Each section is dedicated to a sub specialty, from polycystic ovary syndrome, ART procedures, and laboratory issues, to implantation, cryopreservation, endoscopy, ultrasound and more. A section entitled ‘contemporary thoughts’ examines the improvement of IVF outcome, ART and older women, and HIV and ART, and another discusses third party reproduction. Edited by internationally recognised experts in reproductive medicine, this comprehensive guide is highly illustrated with clinical photographs and diagrams to enhance learning. Previous edition (9781841844497) published in 2004. Key points Fully revised, second

edition providing latest advances in ART Complete section dedicated to third party reproduction Highly experienced, internationally recognised editor and author team Previous edition (9781841844497) published in 2004

### Advances in Assisted Reproductive Technologies

This book reviews important advances that have made the field of assisted reproduction a dynamic subspecialty and provides insight into other exciting areas of research that will continue to revolutionize the field in the future. Assisted reproductive technology (ART) involves the use of medical techniques to tackle infertility. ART includes the usage of procedures such as ICSI (intracytoplasmic sperm injection), IVF (in vitro fertilization), cryopreservation of embryos or gametes, use of fertility medication and so on. This book aims to highlight the most recent advances in assisted conception and highlights ongoing and potential future of this field. This book consists of 42 chapters, which include individualized controlled ovarian stimulation, Luteal phase stimulation, role of adjuvants in controlled ovarian hyperstimulation, endometrial receptivity, procedure in assisted reproductive technology, genetic testing in male infertility, medical management of male infertility, color Doppler in infertility, fertility-enhancing surgeries in ART, recurrent pregnancy loss, regenerative medicine in infertility, oocyte quality, morphokinetics in ART, co-culture techniques in ART, triple parenting etc. The book is a comprehensive learning manual providing important information for both scientists and clinicians. Every chapter is focused on a specific topic and uses international scientific standards of evidence-based medicine.

### The Art & Science of Assisted Reproductive Technology

The Art & Science of Assisted Reproductive Technology is a comprehensive step by step guide to different types of ART. The book is divided into fifteen sections, beginning with instructions on setting up an assisted reproductive technology laboratory. The second section is a guide to the evaluation of an infertile couple, including the use of ultrasound and Doppler imaging in infertility, and the effect of the environment on fertility. Further sections include information on third party reproduction, medical and surgical treatments, and gamete donation and manipulation. The book describes ART techniques that employ molecular genetics, which can maximise the efficiency of ART treatments. Conditions that negatively affect fertility, including sexually transmitted diseases, endometriosis, ectopic pregnancy and immune system conditions are also discussed in detail. The Art & Science of Assisted Reproductive Technology covers all aspects of ART, from laboratory set up, embryo transfer and implantation, to cryopreservation (freezing) of eggs, sperm and embryos. Enhanced by nearly 300 full colour images, illustrations and tables, this book an essential resource for gynaecologists and infertility specialists. Key Points Comprehensive step by step guide to all aspects of assisted reproductive technology Includes guide to set up of an ART laboratory Information on ART in special conditions, third party ART and complications in ART 287 full colour images, illustrations and tables

### Art and Science of Assisted Reproductive Technology

Textbook of Assisted Reproductive Technologies is a truly comprehensive manual for the whole team at the IVF clinic. Information is presented in a highly visual manner, allowing both methods and protocols to be consulted easily. The text provides clinical and scientific teams with the A to Zs of setting up an embryology laboratory, gives research fellows insight into technical developments, and supplies seasoned professionals with a review of the latest techniques and advances. New to the Third Edition: fully revised and expanded chapters, with new information on: single embryo transfer artificial gametes pharmacogenetics

### Textbook of Assisted Reproductive Techniques

Assisted reproduction techniques have led to the birth of 4 million babies worldwide. Assisted reproduction techniques (ART), in particular in-vitro fertilization and intra-cytoplasmic sperm injection, are the most advanced forms of infertility treatment. They involve numerous counseling, medical, surgical and laboratory-based steps. At each step various problems and complications could be encountered that challenge even the most experienced ART practitioners. Moreover, patients with complex medical disorders may require ART, presenting further challenges. Assisted Reproduction Techniques will stimulate resourceful thinking in the ART practitioner when faced with these challenges. It outlines various management options, the reasoning behind them, and the evidence on which they are based to enable the practitioner to choose the most suitable solution for the needs of each patient. Written by 122 internationally renowned experts, Assisted Reproduction Techniques follows the patient's journey throughout the whole ART process, with chapters on: Counseling and preparation Ovarian stimulation Oocyte retrieval Embryo transfer The luteal phase The ART laboratory The male patient The ART pregnancy. Each of the 100 concise chapters includes clinical cases, background, evidence-based practical management options, preventive measures and key-point summaries of the important details. Assisted Reproduction Techniques gives a wide-ranging practical guide to all those wishing to support couples who cannot conceive naturally.

### Contemporary Perspectives on Assisted Reproductive Technology

The World Congress of In Vitro Fertilization and Alternate Assisted Reproduction, held in Jerusalem, Israel, 2-7 April, 1989, was the sixth in the sequence of these Congresses, but was the first to emphasize the major importance and the place of assisted reproductive technologies in the treatment of infertility. The eternal City of Jerusalem witnessed the gathering of more than 1500 participants from all over the world who shared and exchanged knowledge and up-to-date experience in this ever-evolving field. The high quality scientific contributions to the Congress culminated in the publication of this Proceedings. It embraces all important aspects in the field of in vitro fertilization and alternate assisted reproduction. Papers on controversies and diversities of methods to stimulate the ovaries, imaging techniques, basic research and state-of-the-art papers on ovarian physiology, the role of GnRH and its analog, clinical aspects of IVF treatment and cryopreservation, up-to-date techniques in assisted reproductive technologies that are quickly developing in conjunction with IVF, were included. When should IVF be preferable to surgery? What are the expected up-to-date world results and what are the psychological, moral, ethical and religious implications? These are all the concerns of the treating team and are addressed here. Male factor infertility remains a frustrating problem, but advances in the understanding of sperm-egg interaction, sperm evaluation and preparation are reported. Micromanipulation emerges as a possible alternative to bring some relief to this problem, but it also promises to be central in promoting the field of prenatal genetic analysis.

### Assisted Reproduction Techniques

This major book - known as 'The Bourn Hall Textbook' - evolved from teaching courses held at this prestigious Clinic - one of the birthplaces of IVF and clinical reproductive medicine. The content is comprehensive: covering assessment of the infertile couple and both laboratory and clinical aspects of assisted reproductive technologies. The emphasis throughout is on the practical management of patients undergoing assisted conception treatment. The third edition is a complete update of the field including expanded sections on newer technologies such as GIFT and ICSI. The book is authored largely by current or previous members of the Bourn Hall staff, with additional material from leading international authorities. The Bourn Hall Procedures, Protocols and Information Sheets - previously published as an Appendix - are now included on CD-ROM for ease of adaptation for local use.

### Advances in Assisted Reproductive Technologies

Part of a new series on reproductive medicine, this book is a complete guide to assisted reproductive technology (ART). Divided into 39 chapters, the book covers all aspects of ART, providing clinicians with a step by step guide through the processes. The text covers ovarian stimulation, embryo transfer, imaging, hormone analysis, endometrial receptivity, surgical procedures and much more. Many different causes of infertility and their management through ART are described in detail. The book presents the latest advances in the field and each chapter includes key points and references for further reading. Clinical photographs, diagrams and tables further enhance the comprehensive text. Other titles in the series include: Practical Guide in Infertility, Practical Guide in Reproductive Surgery and Practical Guide in Andrology and Embryology. Key points Comprehensive guide to assisted reproductive technology

Part of new series on reproductive medicine Covers numerous ART procedures for management of infertility Chapters include key points and detailed references for further reading

### A Textbook of In Vitro Fertilization and Assisted Reproduction

Utilizing the very latest assisted reproductive technologies, this text provides an introduction to good clinical practice in the investigation and treatment of infertility. There are chapters on clinical assessment of the male and the female, followed by detailed chapters on the clinical procedures that can be put in place to help overcome infertility. Also included is coverage of IVF, GIFT and ZIFT and clinical aspects of PGD, in addition to how to set up a successful IVF Unit.

### Practical Guide in Assisted Reproductive Technology

First published in 2003. Routledge is an imprint of Taylor & Francis, an informa company.

### Good Clinical Practice in Assisted Reproduction

Comprehensive guide to Assisted Reproductive Technologies (ART) and embryology with step by step descriptions of different types of ART. Includes DVD.

### Third Party Assisted Conception Across Cultures

This book brings together the most current research and the latest clinical approaches to the management of diminished ovarian reserve (DOR), one of the largest segments of the IVF patient population, both in the advanced reproductive age group as well as poor responders. Opening with a review of the definition and scope of the problem, as well as the current understanding of the natural history of DOR, subsequent chapters in part I outline dietary, hormonal, traditional supplements and conventional methods used to stimulate ovaries and improve ART outcomes. The main segment of chapters, comprising part II, present minimal and mild stimulation protocols and alternatives, frozen embryo transfer preparation, trigger agents and post-trigger testing, embryo culture and endometrial considerations, and a review of clinical outcomes. Part III discusses the utilization of contemporary technologies in the treatment of DOR, including fresh vs. frozen embryo transfer, cryopreservation and comprehensive chromosomal analysis. Future prospects are presented in part IV, such as the artificial oocyte and ovary development, early-age oocyte freezing, ovarian cortical tissue freezing and activation of the ovarian cortex. Utilizing the latest evidence and authored by an international array of thought leaders, Diminished Ovarian Reserve and Assisted Reproductive Technologies is an excellent resource for reproductive medicine and REI specialists, IVF lab professionals, and students and residents in these areas.

### Manual of Assisted Reproductive Technologies and Clinical Embryology

Covers a wide range of topics beginning with the basics of reproduction and ending with a practical guide to quality management. The chapters in between discuss infertility treatable by ART and non ART protocols which have been comprehensively discussed.

### Diminished Ovarian Reserve and Assisted Reproductive Technologies

Textbook of Assisted Reproductive Technologies is a truly comprehensive manual for the whole team at the IVF clinic. Information is presented in a highly visual manner, allowing both methods and protocols to be consulted easily. The text provides clinical and scientific teams with the A to Zs of setting up an embryology laboratory, gives research fellows insight into technical developments, and supplies seasoned professionals with a review of the latest techniques and advances. New to the Third Edition: fully revised and expanded chapters, with new information on: single embryo transfer, artificial gametes, pharmacogenetics.

### Clinics in Reproductive Medicine and Assisted Reproductive Technology

Written by leading international specialists, this book provides a comprehensive, state-of-the-art overview of endocrine-based female reproductive disorders. Particularly focusing on the Hypothalamus – Pituitary – Ovary (HPO) axis as the main driver of reproduction in women, it discusses amenorrhea; chronic anovulation and polycystic ovary syndrome as the most common dysfunctions of the HPO axis; endocrine diseases as possible impacts on the HPO axis; uterine disorders related to estrogen/proges-

terone; and the impact of endometriosis and uterine fibroids on reproduction. It also addresses infertility and menopause as hormone-related disorders in women and endocrine changes during pregnancy and lactation, and in breast disorders. The book is intended as a major reference for endocrinologists, gynecologists, and obstetricians, as well as basic and clinical scientists. It is published as part of the SpringerReference program, which provides access to live editions constantly updated through a dynamic peer-review publishing process.

#### Textbook of Assisted Reproductive Technologies: Laboratory and Clinical Perspectives, Third Edition

Reproductive Technologies in Animals provides the most updated and comprehensive knowledge on the various aspects and applications of reproductive technologies in production animals as well as companion, wild, exotic, and laboratory animals and birds. The text synthesizes historical information and recent discoveries, while dealing with economical and geographical issues related to the implementation of the same technologies. It also presents the effects of reproductive technology implementation on animal welfare and the possible threat of pathogen transmission. Reproductive Technologies in Animals is an important resource for academics, researchers, professionals in public and private animal business, and students at the undergraduate and graduate levels, as it gives a full and detailed first-hand analysis of all species subjected to the use of reproductive technologies. Provides research from a team of scientists and researchers whose expertise spans all aspects of animal reproductive technologies Addresses the use of reproductive technologies in a wide range of animal species Offers a complete description and historical background for each species described Discusses successes and failure as well as future challenges in reproductive technologies

#### Female Reproductive Dysfunction

Offers a comprehensive guide to assisted reproductive technology surveillance, describing its history, global variations, and best practices.

#### Reproductive Technologies in Animals

How and to what extent have Islamic legal scholars and Middle Eastern lawmakers, as well as Middle Eastern Muslim physicians and patients, grappled with the complex bioethical, legal, and social issues that are raised in the process of attempting to conceive life in the face of infertility? This path-breaking volume explores the influence of Islamic attitudes on Assisted Reproductive Technologies (ARTs) and reveals the variations in both the Islamic jurisprudence and the cultural responses to ARTs.

#### Assisted Reproductive Technology Surveillance

Sets out the Government's response to the 104 recommendations made in the Commons Science and Technology Select Committee report of their year long inquiry into options for the future regulation of human reproductive technologies in the UK.

#### Islam and Assisted Reproductive Technologies

Infertility and assisted reproductive technologies in India lie at the confluence of multiple cultural conceptions. These 'conceptions' are key to understanding the burgeoning spread of assisted reproductive technologies and the social implications of infertility and childlessness in India. This longitudinal study is situated in a number of diverse locales which, when taken together, unravel the complex nature of infertility and assisted conception in contemporary India.

#### Textbook of IUI and ART

This book had its beginning in 1967 when Shirley G. Driscoll and Kurt Benirschke wrote in English the volume on placental pathology for the Henke-Lubarsch, the noted German Handbook of Pathology. There seemed to be a need for wider distribution of the text and it was reprinted by Springer Verlag, New York, essentially the only book available devoted just to the human placenta. Dr. Benirschke authored 5 subsequent editions in collaboration with Peter Kaufmann, Rebecca Baergen and Graham Burton in 1990 (2nd edition), 1995 (3rd edition), 2000 (4th edition), 2006 (5th edition) and 2012 (6th edition). In the early editions, the most important material was in a larger font than the extensive review of exceptions and the discussion in the literature. Since 1967, many other shorter placenta books have been published in English, French and German. None of these have included the breadth of discussion or the voluminous references which includes details of many historic articles, not readily available.

Interest in the placenta has wildly expanded over the intervening 50+ years with the vast majority of Pathologists, Obstetricians and Pediatricians recognizing its value. In addition, there are now quite a few new journals, societies and meetings devoted to the placenta in both clinical and research areas. The interest extends into areas of study well beyond the realm of anatomic pathology. The 7th edition will, of necessity, differ from the prior editions which Dr. Benirschke wrote largely himself at first, and later with the help of the above noted co-authors. It will now be an international multi-authored book with nearly 40 contributors revising one or more chapters. The explosion of new information as necessitating some reordering of chapters and adding completely new chapters including Chapters 31 and 32, "Innovations in Placental Pathology" and "Imaging in Placental Pathology". Dr. Burton's section has been extensively edited, as well. The editors gave the new authors considerable latitude in how to write the new and/or edited chapters. Many of the revised chapters retain much of Dr. Benirschke's anecdotal information as well as the voluminous references. Others are more modern in their approach. All contain substantial new references and current information. It is our hope that Benirschke's Pathology of the Human Placenta will remain as a mainstay reference in placental pathology. It aims to help readers gain a broad understanding of how placental architecture is shaped during normal development, with a view to appreciating how this may be perturbed in complications of pregnancy.

### New Reproductive and Genetic Technologies

This is the first transnational history of IVF and assisted reproduction. It is a key text for scholars and students in social science, history, science and technology studies (STS), cultural studies, and gender and sexuality studies, and a resource for journalists, policymakers, and anyone interested in assisted reproduction. IVF was seen as revolutionary in 1978 when the first two IVF babies were born, in the UK and India. Assisted reproduction has now contributed to the birth of around ten million people. The book traces the work of IVF teams as they developed new techniques and laid the foundations of a multi-billion-dollar industry. It analyses the changing definitions and experience of infertility, the markets for eggs and children through surrogacy, cross-border reproductive treatment, and the impact of regulation. Using interviews with leading IVF figures, archives, media reports, and the latest science, it is a vital addition to the field of reproduction studies. 'This pathbreaking account of the global forces behind the rapid rise of the fertility industry is the first to offer such a truly comprehensive overview of this hugely important topic.' —Sarah Franklin, Chair of Sociology, University of Cambridge 'In this compelling overview of one of the most significant technological and social interventions ever developed, the cultural and scientific imaginaries of assisted reproduction meet the obdurate histories of laboratory experiments, biological materials, and personal quests. It is an indispensable read for anyone interested in IVF and assisted reproduction.' —Andrea Whittaker, Professor of Anthropology, Monash University

### Government Response to the Report from the House of Commons Science and Technology Committee

Groundbreaking, comprehensive, and developed by a panel of leading international experts in the field, Textbook of Assisted Reproduction provides a multidisciplinary overview of the diagnosis and management of infertility, which affects 15% of all couples around the world. The book aims to cover all aspects of assisted reproduction. Particular attention is given to topics such as the assessment of infertile couples; assisted reproductive techniques (ARTs) including ovulation induction, intra uterine insemination (IUI), in vitro fertilization (IVF) and intracytoplasmic sperm injection (clinical and laboratory aspects); reproductive genetics; and obstetric and perinatal outcomes.

### Assisted Reproduction in the Nordic Countries

A wide-ranging, comprehensive overview of pressing issues in bioethics today, this handbook takes into account current affairs and historical precedents. Interdisciplinary authorship and global examples make the handbook applicable to a variety of scholar, student, and practitioner types.

### Conceptions

Examines emerging assisted reproductive technologies that will revolutionise the future of human reproduction and their regulation.

### Benirschke's Pathology of the Human Placenta

Infertility is a major public health concern and medical condition that afflicts millions globally. As such, many people seek reproductive care with the goal of receiving a proper diagnosis and a successful outcome using assisted reproductive technology (ART). *Infertility: Assisted Methods of Reproduction and Hormonal Assays* provides an overview of ART methods and discusses recent trends in the field. Chapters cover an array of topics including diagnosis of infertility using hormonal assays, adverse outcomes of ART, oocyte donation, cryopreservation of oocytes and embryos and psychosocial care.

#### IVF and Assisted Reproduction

This book addresses the impacts of current and future reproductive technologies on our world food production and provides a significant contribution to the importance of research in the area of reproductive physiology that has never been compiled before. It would provide a unique opportunity to separate the impacts of how reproductive technologies have affected different species and their contributions to food production. Lastly, no publication has been compiled that demonstrates the relationship between developments in reproductive management tools and food production that may be used as a reference for scientists in addressing future research areas. During the past 50 years assisted reproductive technologies have been developed and refined to increase the number and quality of offspring from genetically superior farm animal livestock species. Artificial insemination (AI), estrous synchronization and fixed-time AI, semen and embryo cryopreservation, multiple ovulation and embryo transfer (MOET), in vitro fertilization, sex determination of sperm or embryos, and nuclear transfer are technologies that are used to enhance the production efficiency of livestock species.

#### Textbook of Assisted Reproduction

The success of Assisted Reproductive Technology is critically dependent upon the use of well optimized protocols, based upon sound scientific reasoning, empirical observations and evidence of clinical efficacy. Recently, the treatment of infertility has experienced a revolution, with the routine adoption of increasingly specialized molecular biological techniques and advanced methods for the manipulation of gametes and embryos. This textbook – inspired by the postgraduate degree program at the University of Oxford – guides students through the multidisciplinary syllabus essential to ART laboratory practice, from basic culture techniques and micromanipulation to laboratory management and quality assurance, and from endocrinology to molecular biology and research methods. Written for all levels of IVF practitioners, reproductive biologists and technologists involved in human reproductive science, it can be used as a reference manual for all IVF labs and as a textbook by undergraduates, advanced students, scientists and professionals involved in gamete, embryo or stem cell biology.

#### The Rowman & Littlefield Handbook of Bioethics

An essential resource for reproduction professionals wishing to understand patient-centered advanced technologies now and in the future.

#### Regulating Assisted Reproductive Technologies

*Human Fertility: Methods and Protocols* is intended for all practitioners of reproductive medicine and ART, as well as for embryologists and reproductive, developmental, cell and molecular biologists and others in the biomedical sciences. The volume presents straight-forward manner best practice approaches for overcoming a host of fertility challenges. Written in the highly successful *Methods in Molecular Biology* series format, chapters include introductions to their respective topics, lists of the necessary materials and reagents, step-by-step, readily reproducible laboratory protocols and tips on troubleshooting and avoiding known pitfalls. Authoritative and cutting-edge, *Human Fertility: Methods and Protocols* aids scientists in continuing to study assisted reproductive technologies.

#### Infertility, Assisted Reproductive Technologies and Hormone Assays

Managing social relationships for childless couples in pro-natalist societies can be a difficult art to master, and may even become an issue of belonging for both men and women. With ethnographic research gathered from two IVF clinics and in two villages in northwestern Turkey, this book explores infertility and assisted reproductive technologies within a secular Muslim population. Göknar investigates the experience of infertility through various perspectives, such as the importance of having a child for women, the mediating role of religion, the power dynamics in same-gender relationships, and the impact of manhood ideologies on the decision for — or against — having IVF.

#### Current and Future Reproductive Technologies and World Food Production

The specialty of fertility preservation offers patients with cancer, who are rendered infertile by chemo- and radiotherapy, the opportunity to realize their reproductive potential. This gold-standard publication defines the specialty. The full range of techniques and scientific concepts is covered in detail, and the author team includes many of the world's leading experts in the field. The book opens with introductions to fertility preservation in both cancer and non-cancer patients, followed by cancer biology, epidemiology and treatment, and reproductive biology and cryobiology. Subsequent sections cover fertility preservation strategies in males and females, including medical/surgical procedures, ART, cryopreservation and transplantation of both ovarian tissue and the whole ovary, and in-vitro follicle growth and maturation. Concluding chapters address future technologies, as well as ethical, legal and religious issues. Richly illustrated throughout, this is a key resource for all clinicians specializing in reproductive medicine, gynecology, oncology, hematology, endocrinology and infertility.
