the role that Architects will play in solving the climate crisis.

Now the climate crisis is huge and requires people from all professions to do their part.

Those in the construction industry play a significant role in dealing with the environmental crisis as buildings are responsible for 40% of global CO2 emissions.

To summarise what I found from my travels. I believe there are 3 distinct ways in which Architects can help save the planet.

Firstly the most exciting way an Architect can help the planet

an example of this is the Cloud Forest in Singapore which offers environmental education to the visitors.

The second way in which an Architect can help save the planet is to deal with the existing building stock

We currently have a vast amount of buildings in our cities which have been poorly designed

It is not possible to simply demolish these buildings as this would require an awful lot of energy and resources.

The final way I believe that Architects can help save the planet is to provide sustainable education to others.
