A Companion to Chinese Archaeology

A Companion to Chinese Archaeology is an unprecedented, new resource on the current state of archaeological research in one of the world's oldest civilizations. It presents a collection of readings from leading archaeologists in China and elsewhere that provide diverse interpretations about social and economic organization during the Neolithic period and early Bronze Age. An unprecedented collection of original contributions from international scholars and collaborative archaeological teams conducting research on the Chinese mainland and Taiwan. Makes available for the first time in English the work of leading archaeologists in China. Provides a comprehensive view of research in key geographic regions of China. Offers diverse methodological and theoretical approaches to understanding China's past, beginning with the era of established agricultural villages from c. 7000 B.C. through to the end of the Shang dynastic period in c. 1045 B.C.

The Archaeology of China

"Past, present and future" The archaeological materials recovered from the Anyang excavations ... in the period between 1928 and 1937... have laid a new foundation for the study of ancient China

(Li, C. 1977: ix)." When inscribed oracle bones and enormous material remains were found through scientific excavation in Anyang in 1928, the historicity of the Shang dynasty was confirmed beyond dispute for the first time (Li, C. 1977: ix-xi). This excavation thus marked the beginning of a modern Chinese archaeology endowed with great potential to reveal much of China's ancient history.. Half a century later, Chinese archaeology had made many unprecedented discoveries which surprised the world, leading Glyn Daniel to believe that "a new awareness of the importance of China will be a key development in archaeology in the decades ahead (Daniel 1981: 211). This enthusiasm was soon shared by the Chinese archaeologists when Su Bingqi announced that "the Golden Age of Chinese archaeology is arriving (Su, B. 1994: 139--140)". In recent decades, archaeology has continuously prospered, becoming one of the most rapidly developing fields in social science in China"--Provided by publisher.

The Golden Age of Chinese Archaeology

This introduction to more than 200 masterpieces from the period 5000 BC to the 10th century AD uncovered in China that confirms archaeologists' conclusion that Chinese civilization and art flowered throughout ancient China. 200+ color illustrations.

Chinese Society in the Age of Confucius (1000-250 BC)

Winner of the 2009 Society for American Archaeology Book Award Chinese Society in the Age of Confucius is based on the most up-to-date archaeological discoveries. It introduces new data, as well as new ways to think about them - modes of analysis that, while familiar to archaeological practitioners in the West and in Japan, are herein applied to evidence from the Chinese Bronze Age for the first time. The treatment of social stratification, clan and lineage organisation, as well as gender and ethnic differences will be of interest to those involved in the general or comparative analysis of grand themes in the Social Sciences.

Studies in Chinese Archaeology

This volume comprises nine articles that fall into three categories: general survey of Chinese archaeology as well as the author's visit to Tom Harrison's field work in Sarawak in 1966; field reports on archaeological sites in Fujian and Sichuan; and archaeological investigations in Hebei, Henan, Shandong and Fujian.

Jinsha Site

The two minerals nephrite and jadeite, popularly comprised under the name jade, belong to the hardest and most cherished materials of which primitive man availed himself in shaping his chisels, hatchets, ornaments, amulets and many other implements. Such objects, partially of considerable antiquity, have been found in many parts of the world--in Asia, New Zealand, in prehistoric Europe and America. -- Introduction.

Jade

The study of early China has been radically transformed over the past fifty years by archaeological discoveries, including both textual and non-textual artefacts. Excavations of settlements and tombs have demonstrated that most people did not lead their lives in accordance with ritual canons, while previously unknown documents have shown that most received histories were written retrospectively by victors and present a correspondingly anachronistic perspective. This handbook provides an authoritative survey of the major periods of Chinese history from the Neolithic era to the fall of the Latter Han Empire and the end of antiquity (AD 220). It is the first volume to include not only a comprehensive review of political history but also detailed treatments of topics that transcend particular historical periods, such as: Warfare and political thought Cities and agriculture Language and art Medicine and mathematics Providing a detailed analysis of the most up-to-date research by leading scholars in the field of early Chinese history, this book will be useful to students and scholars of Chinese history, Asian archaeology, and Chinese studies in general.

Routledge Handbook of Early Chinese History

This book presents an anthology of English-language archaeological and anthropological writings by Li Chi, the founding father of modern archaeology in China. It is divided into 15 chapters; in the

first two, Dr. Li sets the stage by introducing the principal characters involved in the first “act” of this modern archaeological drama; in the third and fourth chapters, he describes the status of Chinese archaeology during the early years of the twentieth century and highlights the contributions of prominent foreigners. Starting with the fifth chapter, Dr. Li begins detailing the excavations and describes the principle finds of the Anyang expedition. In turn, the book’s closing chapters present a summary of the findings and descriptions of some of the major publications that this monumental project has yielded. For readers who are interested in Chinese civilization, what will appeal to them most are the details of the excavations of Yin Hsü (the ruins of the Yin Dynasty), including building foundations, bronzes, chariots, pottery, stone and jade, and thousands of oracle bones, which are vividly shown in historical pictures. These findings transformed the Yin Shang culture from legend into history and thus moved China’s history forward by hundreds of years, shocking the world. The anthology also includes Li Chi’s reflections on central problems in Chinese anthropology, which are both enlightening and thought-provoking.

Anyang

Cloth edition available for \$50.00.

The Archaeology of Ancient China

“The Earliest China” is the first archaeological book in China to translate in the dominant language of the world on the origin of Chinese ancient civilization in the Central Plains and the study of Xia dynastic culture. It shows readers all over the world the outstanding achievements in the study of the formation of early state in China and is the first English translation monograph on the birth history of the first dynasty of Hua-Xia nation from the perspective of archaeology. With the specific archaeological data on the basis of excavations and investigation conducted in recent years, this book focuses on the interpretation of the rise and development of the ancient civilization having initially appeared in the Central Plain of China and even in the Eastern Asia. The book contents include abundant manifestations of the first flourishing civilization especially at the Erlitou site along the Yi and Luo Rivers, characteristic of ultra-large capital city, palace buildings, elaborate bronze vessels, and stratified social organization. With the combination of previously literature, the original author attempts to further explain how the earliest China, a royal-powered, and large-scaled state, emerged four thousand years ago. In this book, the analysis on a comprehensive landscape of the ancient civilization prior to the Shang Dynasty leads the point of views, distinctively from the traditional historical perspectives. With a global perspective, he further compares with other significant civilizations in the world and also points out cultural communications between the early China and other external cultures in the Bronze Age. Therefore, this book, the Earliest China of English translated version, is so appropriate to be recommended to foreign scholars and sinologists, as well as everyone who has been attracted by China’s charm overseas. With book contents, ideas, and thoughts that it contains, one can easily acknowledge the goals, methods, and reconstruction process of China’s prehistory, so English readers will acknowledge so well about the Chinese Archaeology in the Bronze Age, which does vary in many aspects from that of European and American.

The Earliest China

This book presents a collection of archaeological and anthropological writings by Li Chi, the founding father of modern archaeology in China. It is divided into two parts, the first of which traces back the rise of Chinese civilization, as well as the origins of the Chinese people; in turn, the second part reviews the rise of archaeology in China as a scientific subject that combines fieldwork methods from the West with traditional antiquarian studies. Readers who are interested in Chinese civilization will find fascinating information on the excavations of Yin Hsü (the ruins of the Yin Dynasty), including building foundations, bronzes, chariots, pottery, stone and jade, and thousands of oracle bones, which are vividly shown in historical pictures. These findings transformed the Yin Shang culture from legend into history and thus moved China’s history forward by hundreds of years, shocking the world. In turn, the articles on anthropology include Li Chi’s reflections on central problems in Chinese anthropology and are both enlightening and thought-provoking.

Ancient China

A collection of articles in which the contributors analyze and reconstruct the roles of women in various regions of China from the late Neolithic to the early Empire period. Topics include mortuary ritual, social

status and structures of power, economic influences on cultural practice, textile production, and art in early Chinese societies.

The Beginnings of Chinese Civilization

An up-to-date synthesis of archaeological discoveries in the upper and middle Yangzi River region of China, including the Three Gorges Dam reservoir zone.

Gender and Chinese Archaeology

This is a reproduction of a book published before 1923. This book may have occasional imperfections such as missing or blurred pages, poor pictures, errant marks, etc. that were either part of the original artifact, or were introduced by the scanning process. We believe this work is culturally important, and despite the imperfections, have elected to bring it back into print as part of our continuing commitment to the preservation of printed works worldwide. We appreciate your understanding of the imperfections in the preservation process, and hope you enjoy this valuable book.

Ancient Central China

This volume aims to satisfy a pressing need for an updated account of Chinese archaeology. It covers an extended time period from the earliest peopling of China to the unification of the Chinese Empire some two thousand years ago. The geographical coverage includes the traditional focus on the Yellow River basin but also covers China's many other regions. Among the topics covered are the emergence of agricultural communities; the establishment of a sedentary way of life; the development of sociopolitical complexity; advances in lithic technology, ceramics, and metallurgy; and the appearance of writing, large-scale public works, cities, and states. Particular emphasis is placed on the great cultural variations that existed among the different regions and the development of interregional contacts among those societies.

Studies in Chinese Archaeology

Up-to-date study of the archaeology and prehistory of Manchuria, focusing on its unique contribution to the development of 'Chinese' culture. Written by Chinese archaeologists - a firsthand account that is highly accessible. Fully illustrated.

Jade

In this book, Xiaolong Wu offers a comprehensive and in-depth study of the Zhongshan state during China's Warring States Period (476–221 BCE). Analyzing artefacts, inscriptions, and grandiose funerary structures within a broad archaeological context, he illuminates the connections between power and identity, and the role of material culture in asserting and communicating both. The author brings an interdisciplinary approach to this study. He combines and cross-examines all available categories of evidence, including archaeological, textual, art historical, and epigraphical, enabling innovative interpretations and conclusions that challenge conventional views regarding Zhongshan and ethnicity in ancient China. Wu reveals the complex relationship between material culture, cultural identity, and statecraft intended by the royal patrons. He demonstrates that the Zhongshan king Cuo constructed a hybrid cultural identity, consolidated his power, and aimed to maintain political order at court after his death through the buildings, sculpture, and inscriptions that he commissioned.

The Archaeology of Early China

Beginning in the mid-nineteenth century, large numbers of people from mainland China emigrated to the United States and other countries seeking employment. Termed "overseas Chinese," they made lasting contributions to the development of early communities, an impact which has only begun to be recognized in recent years. "Chinatowns," rural mining claims, work camps for railroad and other construction activities, salmon canneries and shrimp camps, laundries, stores, cook shacks, cemeteries, and temples are only some of the sites where traces of their presence can be found. In recent years, numerous archaeological and historical investigations of the overseas Chinese have taken place, and "Hidden Heritage" presents the results of some of those studies.

The Golden Age of Chinese Archaeology

Spend 24 hours with the ancient Chinese. Travel back to AD 17, during the fourth year of the reign of Wang Mang of the Han dynasty, a vibrant and innovative era full of conflicts and contradictions. But as different as the Han culture might have been to other great ancient civilizations, the inhabitants of ancient China faced the same problems as people have for time immemorial: earning enough money, coping with workplace dramas and keeping your home in order. Although the equivalent in this era was more about bribing inspectors, avoiding bullying from abusive watchmen and trying to keep your house from being looted by Huns. In each chapter we meet one of 24 citizens of this ancient culture, from the midwife to the soldier, the priest to the performer and the bronze worker to the tomb looter, and see what an average day in ancient China was really like.

Recent Discoveries in Chinese Archaeology

A Companion to Chinese History presents a collection of essays offering a comprehensive overview of the latest intellectual developments in the study of China's history from the ancient past up until the present day. Covers the major trends in the study of Chinese history from antiquity to the present day. Considers the latest scholarship of historians working in China and around the world. Explores a variety of long-range questions and themes which serves to bridge the conventional divide between China's traditional and modern eras. Addresses China's connections with other nations and regions and enables non-specialists to make comparisons with their own fields. Features discussion of traditional topics and chronological approaches as well as newer themes such as Chinese history in relation to sexuality, national identity, and the environment.

The Archaeology of Northeast China

This work has been selected by scholars as being culturally important, and is part of the knowledge base of civilization as we know it. This work was reproduced from the original artifact, and remains as true to the original work as possible. Therefore, you will see the original copyright references, library stamps (as most of these works have been housed in our most important libraries around the world), and other notations in the work. This work is in the public domain in the United States of America, and possibly other nations. Within the United States, you may freely copy and distribute this work, as no entity (individual or corporate) has a copyright on the body of the work. As a reproduction of a historical artifact, this work may contain missing or blurred pages, poor pictures, errant marks, etc. Scholars believe, and we concur, that this work is important enough to be preserved, reproduced, and made generally available to the public. We appreciate your support of the preservation process, and thank you for being an important part of keeping this knowledge alive and relevant.

Recent Discoveries in Chinese Archaeology

Summaries in English of Chinese archaeology journals.

Material Culture, Power, and Identity in Ancient China

This book analyzes Han dynasty Chinese archaeology based on a comparison of the forms of vessels found in positively dated tombs.

Hidden Heritage

This volume looks at the effects of interaction and the nature of identity construction in a frontier or contact zone through the analysis of material culture, especially in mortuary settings.

Exploring China's Past

An account of the remarkable decade of Chinese archaeology from 1972 to 1981, as abstracted from Chinese journals. Volume 2, Prehistoric to Western Zhou, contains abstracts of over 110 articles describing excavations at sites ranging from Paleolithic through Western Zhou.

24 Hours in Ancient China

This volume comprises eight articles that fall into three groups: surveys of Chinese art and archaeology and their interrelationships, the exhibition of Chinese archaeological finds, and an account of Dunhuang studies in China up to 1947; animal styles, floral patterns and yinyang wuxing in Chinese art; and Chinese epigraphy.

A Companion to Chinese History

Applies the 'life history' of objects approach to China's prehistoric, early dynastic and more recent material culture.

Chinese Archaeology

Paleolithic sites from one million years ago, Neolithic sites with extraordinary jade and ceramic artifacts, excavated tombs and palaces of the Shang and Zhou dynasties--all these are part of the archaeological riches of China. This magnificent book surveys China's archaeological remains and in the process rewrites the early history of the world's most enduring civilization. Eminent scholars from China and America show how archaeological evidence establishes that Chinese culture did not spread from a single central area, as was long assumed, but emerged out of geographically diverse, interacting Neolithic cultures. Taking us to the great archaeological finds of the past hundred years--tombs, temples, palaces, cities--they shed new light on many aspects of Chinese life. With a wealth of fascinating detail and hundreds of reproductions of archaeological discoveries, including very recent ones, this book is an invaluable resource for anyone interested in Chinese antiquity and Chinese views on the formation of their own civilization.

JADE

The Oxford Handbook on Early China brings 30 scholars together to cover early China from the Neolithic through Warring States periods (ca 5000-500BCE). The study is chronological and incorporates a multidisciplinary approach, covering topics from archaeology, anthropology, art history, architecture, music, and metallurgy, to literature, religion, paleography, cosmology, religion, prehistory, and history.

The Oxford Handbook of the Archaeology of Childhood

Real understanding of past societies is not possible without including children, and yet they have been strangely invisible in the archaeological record. Compelling explanation about past societies cannot be achieved without including and investigating children and childhood. However marginal the traces of children's bodies and bricolage may seem compared to adults, archaeological evidence of children and childhood can be found in the most astonishing places and spaces. The archaeology of childhood is one of the most exciting and challenging areas for new discovery about past societies. Children are part of every human society, but childhood is a cultural construct. Each society develops its own idea about what a childhood should be, what children can or should do, and how they are trained to take their place in the world. Children also play a part in creating the archaeological record itself. In this volume, experts from around the world ask questions about childhood - thresholds of age and growth, childhood in the material culture, the death of children, and the intersection of the childhood and the social, economic, religious, and political worlds of societies in the past.

The Oxford Handbook of Archaeology

This handbook provides an authoritative guide to the full range of archaeological activities past and present. It will give the reader a sense of the history of the subject and of the main theoretical debates, as well as a taste of the excitement generated by archeological exploration.

The Oxford Handbook of Archaeology

This handbook provides an authoritative guide to the full range of archaeological activities past and present. It will give the reader a sense of the history of the subject and of the main theoretical debates, as well as a taste of the excitement generated by archeological exploration.

The Oxford Handbook of Anglo-Saxon Archaeology

Written by a team of experts and presenting the results of the most up-to-date research, The Handbook of Anglo-Saxon Archaeology will both stimulate and support further investigation into a society poised at the interface between prehistory and history.

The Oxford Handbook of the Archaeology of Ritual and Religion

A comprehensive overview, by period and region, of the archaeology of ritual and religion. The coverage is global, and extends from the earliest prehistory to modern times. Written by over sixty renowned specialists, the Handbook presents the very best in current scholarship, and will also stimulate further research.

The Oxford Handbook of the Archaeology and Anthropology of Rock Art

This handbook is currently in development, with individual articles publishing online in advance of print publication. At this time, we cannot add information about unpublished articles in this handbook, however the table of contents will continue to grow as additional articles pass through the review process and are added to the site. Please note that the online publication date for this handbook is the date that the first article in the title was published online. For more information, please read the site FAQs.

The Oxford Handbook of Public Archaeology

The Oxford Handbook of Public Archaeology seeks to reappraise the place of archaeology in the contemporary world by providing a series of essays that critically engage with both old and current debates in the field of public archaeology. Divided into four distinct sections and drawing across disciplines in this dynamic field, the volume aims to evaluate the range of research strategies and methods used in archaeological heritage and museum studies, identify and contribute to key contemporary debates, critically explore the history of archaeological resource management, and question the fundamental principles and practices through which the archaeological past is understood and used today.

The Oxford Handbook of the Archaeology of the Contemporary World

This Handbook is the first comprehensive survey of a rapidly expanding sub-field in archaeology, the study of the present and recent past. It seeks to explore the boundaries of this emerging area, to develop a tool-kit of concepts and methods, which are applicable to this new sub-field, and to suggest important future trajectories for research.

The Oxford Handbook of Archaeology

Archaeology is a vast subject - it is the study of human society everywhere in the world, from distant human origins 3-4 million years ago up to the present day. The Oxford Handbook of Archaeology brings together 35 authors - all specialists in their own fields - to explain what archaeology is really about. This is one of the most comprehensive treatments of the subject and of the key debates ever attempted. It is designed to open up the world of archaeology to non-specialists and to provide an essential starting point for those who want to pursue particular topics in more depth.

The Oxford Handbook of the Archaeology of the Levant

This Handbook offers an overview of the archaeology of the Levant. Written by leading scholars in the field, it integrates the treatment of the archaeology of the region within its larger cultural and social context and focuses chronologically on the Neolithic through to the Persian periods.

The Oxford Handbook of Later Medieval Archaeology in Britain

The Middle Ages are all around us in Britain. The Tower of London and the castles of Scotland and Wales are mainstays of cultural tourism and an inspiring cross-section of later medieval finds can now be seen on display in museums across England, Scotland, and Wales. Medieval institutions from Parliament and monarchy to universities are familiar to us and we come into contact with the later Middle Ages every day when we drive through a village or town, look up at the castle on the hill, visit a local church or wonder about the earthworks in the fields we see from the window of a train. The Oxford Handbook of Later Medieval Archaeology in Britain provides an overview of the archaeology of the later Middle Ages in Britain between AD 1066 and 1550. 61 entries, divided into 10 thematic sections, cover topics ranging from later medieval objects, human remains, archaeological science, standing buildings, and sites such as castles and monasteries, to the well-preserved relict landscapes which still survive. This is a rich and exciting period of the past and most of what we have learnt about the material culture of our medieval past has been discovered in the past two generations. This volume provides comprehensive coverage of the latest research and describes the major projects and concepts that are changing our understanding of our medieval heritage.

The Oxford Handbook of African Archaeology

This Handbook provides a comprehensive synthesis of African archaeology, covering the entirety of the continent's past from the beginnings of human evolution to the archaeological legacy of European colonialism. It includes a mixture of key methodological and theoretical issues and debates and situates the subject's contemporary practice.

The Oxford Handbook of Light in Archaeology

Light plays a crucial role in mediating relationships between people, things, and spaces, yet lightscapes have been largely neglected in archaeology study. This volume offers a full consideration of light in archaeology and beyond, exploring diverse aspects of illumination in different spatial and temporal contexts from prehistory to the present.

The Oxford Handbook of Archaeological Ceramic Analysis

This volume draws together topics and methodologies essential for the socio-cultural, mineralogical, and geochemical analysis of archaeological ceramic, one of the most complex and ubiquitous archaeomaterials in the archaeological record. It provides an invaluable resource for archaeologists, anthropologists, and archaeological materials scientists.

The Oxford Handbook of Neolithic Europe

'The Oxford Handbook of Neolithic Europe' provides a comprehensive, geographically extensive, thematic overview of the European Neolithic - from Iberia to Russia and from Norway to Malta - offering both a general introduction and a clear exploration of key issues and current debates surrounding evidence and interpretation.

The Oxford Handbook of Southwest Archaeology

This volume takes stock of the empirical evidence, theoretical orientations, and historical reconstructions of archaeology of the American Southwest. Themed chapters on method and theory are accompanied by comprehensive overviews of all major cultural traditions in the region, from the Paleoindians, to Chaco Canyon, to the onset of Euro-American imperialism.

The Archaeology of Death and Burial

The archaeology of death and burial is central to our attempts to understand vanished societies. Through the remains of funerary rituals we can learn not only about the attitudes of prehistoric people to death and the afterlife, but also about their way of life, their social organisation and their view of the world. This ambitious book reviews the latest research in this huge and important field, and describes the sometimes controversial interpretations that have led to rapid advances in our understanding of life and death in the distant past. A unique overview and synthesis of one of the most revealing fields of research into the past, it covers archaeology's most breathtaking discoveries, from Tutankhamen to the Ice Man, and will find a keen market among archaeologists, historians and others who have a professional interest in, or general curiosity about, death and burial.

The Oxford Handbook of the Archaeology of Death and Burial

This Handbook reviews the state of mortuary archaeology and its practice with forty-four chapters focusing on the history of the discipline and its current scientific techniques and methods. Written by leading scholars in the field, it derives its examples and case studies from a wide range of time periods and geographical areas.

The Oxford Handbook of the Valley of the Kings

The royal necropolis of New Kingdom Egypt, known as the Valley of the Kings (KV), is one of the most important - and celebrated - archaeological sites in the world. Located on the west bank of the Nile river, about three miles west of modern Luxor, the valley is home to more than sixty tombs, all dating to the second millennium BCE. The most famous of these is the tomb of Tutankhamun, first discovered by Howard Carter in 1922. Across thirty-eight chapters, this handbook locates the Valley of the Kings in space and time, examines individual tombs, their construction, content, development, and significance, reviews modern research and exploration in the valley, and discusses the current status of ongoing issues of preservation and archaeology.

The Oxford Handbook of Roman Britain

This handbook is currently in development, with individual articles publishing online in advance of print publication. At this time, we cannot add information about unpublished articles in this handbook, however the table of contents will continue to grow as additional articles pass through the review process and are added to the site. Please note that the online publication date for this handbook is the date that the first article in the title was published online. Roman Britain is a critical area of research within the provinces of the Roman empire. Within the last 15-20 years, the study of Roman Britain has been transformed through an enormous amount of new and interesting work which is not reflected in the main stream literature.

The Oxford Handbook of Wetland Archaeology

This Handbook sets out the key issues and debates in the theory and practice of wetland archaeology which has played a crucial role in studies of our past. Due to the high quantity of preserved organic materials found in humid environments, the study of wetlands has allowed archaeologists to reconstruct people's everyday lives in great detail.

Oxford Handbook of Archaeological Theory

The Oxford Handbook of North American Archaeology reviews the continent's first and last foragers, farmers, and great pre-Columbian civic and ceremonial centers, from Chaco Canyon to Moundville and beyond.

The Oxford Handbook of North American Archaeology

The Oxford Handbook of the European Bronze Age is a wide-ranging survey of a crucial period in prehistory during which many social, economic, and technological changes took place. Written by expert specialists in the field, the book provides coverage both of the themes that characterize the period, and of the specific developments that took place in the various countries of Europe. After an introduction and a discussion of chronology, successive chapters deal with settlement studies, burial analysis, hoards and hoarding, monumentality, rock art, cosmology, gender, and trade, as well as a series of articles on specific technologies and crafts (such as transport, metals, glass, salt, textiles, and weighing). The second half of the book covers each country in turn. From Ireland to Russia, Scandinavia to Sicily, every area is considered, and up to date information on important recent finds is discussed in detail. The book is the first to consider the whole of the European Bronze Age in both geographical and thematic terms, and will be the standard book on the subject for the foreseeable future.

The Oxford Handbook of the European Bronze Age

The Greek Bronze Age, roughly 3000 to 1000 BCE, witnessed the flourishing of the Minoan and Mycenaean civilizations, the earliest expansion of trade in the Aegean and wider Mediterranean Sea, the development of artistic techniques in a variety of media, and the evolution of early Greek religious practices and mythology. The period also witnessed a violent conflict in Asia Minor between warring peoples in the region, a conflict commonly believed to be the historical basis for Homer's Trojan War. The Oxford Handbook of the Bronze Age Aegean provides a detailed survey of these fascinating aspects of the period, and many others, in sixty-six newly commissioned articles. Divided into four sections, the handbook begins with Background and Definitions, which contains articles establishing the discipline in its historical, geographical, and chronological settings and in its relation to other disciplines. The second section, Chronology and Geography, contains articles examining the Bronze Age Aegean by chronological period (Early Bronze Age, Middle Bronze Age, Late Bronze Age). Each of the periods are further subdivided geographically, so that individual articles are concerned with Mainland Greece during the Early Bronze Age, Crete during the Early Bronze Age, the Cycladic Islands during the Early Bronze Age, and the same for the Middle Bronze Age, followed by the Late Bronze Age. The third section, Thematic and Specific Topics, includes articles examining thematic topics that cannot be done justice in a strictly chronological/geographical treatment, including religion, state and society, trade, warfare, pottery, writing, and burial customs, as well as specific events, such as the eruption of Santorini and the Trojan War. The fourth section, Specific Sites and Areas, contains articles examining the most important regions and sites in the Bronze Age Aegean, including Mycenae, Tiryns, Pylos, Knossos, Kommos, Rhodes, the northern Aegean, and the Uluburun shipwreck, as well as adjacent areas such as the Levant, Egypt, and the western Mediterranean. Containing new work by an international team of experts, The Oxford Handbook of the Bronze Age Aegean represents the most comprehensive, authoritative, and up-to-date single-volume survey of the field. It will be indispensable for scholars and advanced students alike.

The Oxford Handbook of the Bronze Age Aegean

"The Oxford Handbook of Prehistoric Oceania presents the archaeology, linguistics, environment and human biology of Melanesia, Micronesia, and Polynesia. First colonized 50,000 years ago, Oceania witnessed the independent invention of agriculture, the construction of Easter Island's statues, and the development of the world's last archaic states."--Provided by publisher.

The Oxford Handbook of Prehistoric Oceania

For more than a century, the study of hunting and gathering societies has been central to the development of both archaeology and anthropology as academic disciplines, and has also generated widespread public interest and debate. This book provides a comprehensive review of hunter-gatherer studies to date, including critical engagements with older debates, new theoretical perspectives, and renewed obligations for greater engagement between researchers and indigenous communities.

The Oxford Handbook of the Archaeology and Anthropology of Hunter-gatherers

This title is a comprehensive survey of maritime archaeology as seen through the eyes of nearly fifty scholars at a time when maritime archaeology has established itself as a mature branch of archaeology.

The Oxford Handbook of Maritime Archaeology

'The Oxford Handbook of Zooarchaeology' offers a cutting-edge compendium of zooarchaeology the world over that seeks to provide a holistic view of the role played by animals in shaping human history, with case studies from five continents examining human-animal relationships across a range of geographical, historical, and cultural contexts.

The Oxford Handbook of Zooarchaeology

This handbook is currently in development, with individual articles publishing online in advance of print publication. At this time, we cannot add information about unpublished articles in this handbook, however the table of contents will continue to grow as additional articles pass through the review process and are added to the site. Please note that the online publication date for this handbook is the date that the first article in the title was published online.

The Oxford Handbook of the Archaeology of Roman Germany

Islamic archaeology is young discipline, emerging only over the course of the 1980s and 1990s. The Oxford Handbook of Islamic Archaeology is the first work of its kind to cover the archaeology of the Islamic world on a global scale, from North Africa to China and Europe to sub-Saharan Africa.

The Oxford Handbook of Islamic Archaeology

"This handbook brings together work by leading scholars of the archaeology of early Christianity in the Mediterranean and surrounding regions. The 34 essays to this volume ground the history, culture, and society of the first seven centuries of Christianity in the latest currents of archaeological method, theory, and research."--

The Oxford Handbook of Early Christian Archaeology

The Oxford Handbook of Prehistoric Figurines is the first text to offer a comparative survey of figurines from across the globe, bringing together myriad contemporary research approaches to provide invaluable insights into their function, context, meaning, and use, as well as past thinking on the human body, gender, and identity.

The Oxford Handbook of Prehistoric Figurines

Through international and multi-period chapters, this volume explores the origins and development of industrialisation from its emergence in 18th century Europe to its contemporary ubiquity. It interrogates the widespread exploitation of natural resources that forged industrialisation and its environmental and social legacy in our globalised world.

The Oxford Handbook of Industrial Archaeology

The Oxford Handbook of the European Iron Age presents a broad overview of current understanding of the archaeology of Europe from 1000 BC through to the early historic periods, exploiting the large quantities of new evidence yielded by the upsurge in archaeological research and excavation on this period over the last thirty years. Three introductory chapters situate the reader in the times and the environments of Iron Age Europe. Fourteen regional chapters provide accessible syntheses of developments in different parts of the continent, from Ireland and Spain in the west to the borders with Asia in the east, from Scandinavia in the north to the Mediterranean shores in the south. Twenty-six thematic chapters examine different aspects of Iron Age archaeology in greater depth, from lifeways,

economy, and complexity to identity, ritual, and expression. Among the many topics explored are agricultural systems, settlements, landscape monuments, iron smelting and forging, production of textiles, politics, demography, gender, migration, funerary practices, social and religious rituals, coinage and literacy, and art and design.

The Oxford Handbook of the European Iron Age

The Oxford Handbook of Historical Ecology and Applied Archaeology presents theoretical discussions, methodological outlines, and case-studies describing the field of overlap between historical ecology and the emerging sub-discipline of applied archaeology to highlight how modern environments and landscapes have been shaped by humans. Historical ecology is based on the recognition that humans are not only capable of modifying their environments, but that all environments on earth have already been directly or indirectly modified. This includes anthropogenic climate change, widespread deforestations, and species extinctions, but also very local alterations, the effects of which may last a few years, or may have legacies lasting centuries or more. With contributions from anthropologists, archaeologists, human geographers, and historians, this volume focuses not just on defining human impacts in the past, but on the ways that understanding these changes can help inform contemporary practices and development policies. Some chapters present examples of how ancient or current societies have modified their environments in sustainable ways, while others highlight practices that had unintended long-term consequences. The possibilities of learning from these practices are discussed, as is the potential of using the long history of human resource exploitation as a method for building or testing models of future change. The volume offers overviews for students, researchers, and professionals with an interest in conservation or development projects who want to understand what practical insights can be drawn from history, and who seek to apply their work to contemporary issues.

The Oxford Handbook of Historical Ecology and Applied Archaeology

This handbook is currently in development, with individual articles publishing online in advance of print publication. At this time, we cannot add information about unpublished articles in this handbook, however the table of contents will continue to grow as additional articles pass through the review process and are added to the site. Please note that the online publication date for this handbook is the date that the first article in the title was published online.

The Oxford Handbook of Historical Archaeology

This title provides comprehensive overviews on archaeological philological, linguistic, and historical issues at the forefront of Anatolian scholarship in the 21st century.

The Oxford Handbook of Ancient Anatolia

Written by an international team of experts, the Handbook makes accessible a full range of theoretical and applied approaches to the study of material culture, and the place of materiality in social theory, presenting current thinking about material culture from the fields of archaeology, anthropology, geography, and science and technology studies.

The Oxford Handbook of Material Culture Studies

The Oxford Handbook of Mesoamerican Archaeology provides a current and comprehensive guide to the recent and on-going archaeology of Mesoamerica. Though the emphasis is on prehispanic societies, this Handbook also includes coverage of important new work by archaeologists on the Colonial and Republican periods. Unique among recent works, the text brings together in a single volume article-length regional syntheses and topical overviews written by active scholars in the field of Mesoamerican archaeology. The first section of the Handbook provides an overview of recent history and trends of Mesoamerica and articles on national archaeology programs and practice in Central America and Mexico written by archaeologists from these countries. These are followed regional syntheses organized by time period, beginning with early hunter-gatherer societies and the first farmers of Mesoamerica and concluding with a discussion of the Spanish Conquest and frontiers and peripheries of Mesoamerica. Topical and comparative articles comprise the remainder of Handbook. They cover important dimensions of prehispanic societies—from ecology, economy, and environment to social and political relations—and discuss significant methodological contributions, such as geo-chemical source studies, as well as new theories and diverse theoretical perspectives. The Handbook concludes

with a section on the archaeology of the Spanish conquest and the Colonial and Republican periods to connect the prehispanic, proto-historic, and historic periods. This volume will be a must-read for students and professional archaeologists, as well as other scholars including historians, art historians, geographers, and ethnographers with an interest in Mesoamerica.
