Financial Markets + Institutions

Mishkin/Eakins textbook's applied managerial perspective takes a practitioner's approach to the study of the structure, function, and management of financial markets and institutions. This substantially revised edition also showcases major new material incorporating the latest research and data in every part of the text, as well as new marginal Internet and end-of-chapter Web exercises.

Financial Markets and Institutions

Recognizing that students need more than an abstract description of financial markets and institutions as they train to become managers successfully working in, or interacting with, the financial service industry, Mishkin and Eakins examine models and concepts through the eyes of a practicing financial manager to see not only why they matter, but also how they are used in the real world. In this way, students learn to place themselves in the role of decision-maker and envision how they might respond to problems and situations that will arise in their future careers. This Fifth Edition boasts expanded coverage of valuation concepts, more quantitative material, and a streamlined, finance-focused presentation. A careful examination of conflicts of interest, a concentration on the impact of new technologies, new data, and refreshing examples all serve to enhance and illuminate important concepts.

Financial Markets and Institutions, Global Edition

You will continue to access your digital ebook products whilst you have your Bookshelf installed. Real-world applications help students navigate the shifting financial landscape. Financial Markets and Institutions takes a practical approach to the changing landscape of financial markets and institutions. Best-selling authors Frederic S. Mishkin and Stanley G. Eakins use core principles to introduce students to topics, then examine these models with real-world scenarios. Empirical applications of themes help students develop essential critical-thinking and problem-solving skills, preparing them for future careers in business and finance. The 9th Edition combines the latest, most relevant information and policies with the authors' hallmark pedagogy to give instructors a refined tool to improve the learning experience.

FINANCIAL MARKETS AND INSTITUTIONS

In Financial Markets and Institutions, bestselling authors Frederic S. Mushin and Stanley G. Eakins provide a practical introduction to prepare students for today's changing landscape of financial markets and institutions. A unifying framework uses core principles to organize students' thinking then examines the models as real-world scenarios from a practitioner's perspective. By analysing these applications, students develop the critical-thinking and problem-solving skills necessary to respond to challenging situations in their future careers. Although this text has undergone a major revision, the Eighth Edition retains Mushin/Eakins' hallmark pedagogy that make it the best-selling textbook on financial markets and institutions.

Foundations of Global Financial Markets and Institutions, fifth edition

The last 30 years have been dramatic for the financial services industry. In the 1990s and 2000s, boundaries between the traditional industry sectors, such as commercial banking and investment banking, broke down and competition became increasingly global in nature. Many forces contributed to this breakdown in interindustry and intercountry barriers, including financial innovation, technology, taxation, and regulation. Then in 2008-2009, the financial services industry experienced the worst financial crisis since the Great Depression. Even into the mid-2010s, the U.S. and world economies have not recovered from this crisis. It is in this context that this book is written. As the economic and competitive environments change, attention to profit and, more than ever, risk become increasingly important. This book offers a unique analysis of the risks faced by investors and savers interacting through both financial institutions and financial markets, as well as strategies that can be adopted for controlling and better managing these risks. Special emphasis is also put on new areas of operations in financial markets and institutions such as asset securitization, off-balance-sheet activities, and globalization of financial services.
