[#big bang theory](#) [#brahma creation](#) [#cosmic origins](#) [#universe amplifier](#) [#creation cycle](#)

Explore the profound interplay between the universe's explosive beginning, famously known as the Big Bang, and the vast cycles of cosmic creation symbolized by Brahma's Day. This concept amplifies our understanding of how existence unfolds, bridging scientific theories with ancient mythological perspectives on the ultimate origins of everything.

The Big Bang and Brahma's Day

A photographic look into the world of vinyl record collectors—including Questlove—in the most intimate of environments—their record rooms. Compelling photographic essays from photographer Eilon Paz are paired with in-depth and insightful interviews to illustrate what motivates these collectors to keep digging for more records. The reader gets an up close and personal look at a variety of well-known vinyl champions, including Gilles Peterson and King Britt, as well as a glimpse into the collections of known and unknown DJs, producers, record dealers, and everyday enthusiasts. Driven by his love for vinyl records, Paz takes us on a five-year journey unearthing the very soul of the vinyl community.

A Modern Method for Guitar

Documents a volatile and productive moment in the development of film studies. In Binghamton Babylon, Scott M. MacDonald documents one of the crucial moments in the history of cinema studies: the emergence of a cinema department at what was then the State University of New York at Binghamton (now Binghamton University) between 1967 and 1977. The department brought together a group of faculty and students who not only produced a remarkable body of films and videos but went on to invigorate the American media scene for the next half-century. Drawing on interviews with faculty, students, and visiting artists, MacDonald weaves together an engaging conversation that explores the academic excitement surrounding the emergence of cinema as a viable subject of study in colleges and universities. The voices of the various participants—Steve Anker, Alan Berliner, Danny Fingeroth, Hollis Frampton, Ernie Gehr, J. Hoberman, Ralph Hocking, Ken Jacobs, Bill T. Jones, Peter Kubelka, Saul Levine, Camille Paglia, Phil Solomon, Maureen Turim, and many others—tell the story of this remarkable period. MacDonald concludes with an analysis of the pedagogical dimensions of the films that were produced in Binghamton, including Larry Gottheim's *Horizons*; Jacobs's *Tom, Tom, the Piper's Son*; Gehr's *Serene Velocity*; Frampton's *Critical Mass*; and Nicholas Ray's final film, *We Can't Go Home Again*. Scott M. MacDonald is Professor of Film History at Hamilton College. His many books include *A Critical Cinema: Interviews with Independent Filmmakers* (now in five volumes); *Avant-Doc: Intersections of Documentary and Avant-Garde Cinema*; and *American Ethnographic Film and Personal Documentary: The Cambridge Turn*. In 2011 he was named an Academy Film Scholar by the Academy of Motion Picture Arts and Sciences.

This book is the definitive study of the life and works of one of Britain's most important inventors who, due to a cruel set of circumstances, has all but been overlooked by history. Alan Dower Blumlein led an extraordinary life in which his inventive output rate easily surpassed that of Edison, but whose early death during the darkest days of World War Two led to a shroud of secrecy which has covered his life and achievements ever since. His 1931 Patent for a Binaural Recording system was so revolutionary that most of his contemporaries regarded it as more than 20 years ahead of its time. Even years after his death, the full magnitude of its detail had not been fully utilized. Among his 128 Patents are the principle electronic circuits critical to the development of the world's first electronic television system.

During his short working life, Blumlein produced patent after patent breaking entirely new ground in electronic and audio engineering. During the Second World War, Alan Blumlein was deeply engaged in the very secret work of radar development and contributed enormously to the system eventually to become 'H2S'- blind bombing radar. Tragically, during an experimental H2S flight in June 1942, the Halifax bomber in which Blumlein and several colleagues were flying, crashed and all aboard were killed. He was just days short of his 39th birthday. For many years there have been rumours about a biography of Alan Blumlein, yet none has been forthcoming. This is the world's first study of a man whose achievements should rank among those of the greatest Britain has produced. This book provides detailed knowledge of every one of his patents and the process behind them, while giving an in depth study of the life and times of this quite extraordinary man.
