Laboratory Manual for Clinical Anatomy and Physiology for Veterinary Technicians

This dictionary contains terms concerning veterinary medicine in general, infectious, parasitic and non-infectious diseases, and anatomy and physiology of domestic animals. These veterinary terms formerly appeared in the "Dictionary of Animal Production Terminology" of the European Association for Animal Production, published by Elsevier in 1985. During the preparation of a new edition of this dictionary, it was decided due to the increasing specialization in animal production and of the associated terminology, to divide it into two volumes, one devoted to animal husbandry terms and the other to veterinary terms. Consequently, specialists in animal production and in animal health who have to work in many languages should consult not only the present volume, but also its companion volume which deals with animal production. The dictionary will be a valuable reference tool for all those engaged in animal health who have to work in four languages.

Manual of Clinical Procedures in Dogs, Cats, Rabbits, and Rodents

Small Animal Medical Diagnosis, Third Edition takes a problem-oriented approach to clinical diagnosis and outlines core information necessary to effectively evaluate the major medical problems in dogs and cats. The new edition continues to serve as a vital tool in accurate and appropriate diagnosis for small animal veterinarians, emergency and critical care veterinarians, and veterinary students.
