Growth of Internationalism in Japan; Report to the Trustees of the Endowment

Excerpt from Growth of Internationalism in Japan: Report to the Trustees of the Endowment My appointment as the Special Correspondent at Tokio of the Division of Intercourse and Education was decided upon at your annual meeting of December 14, 1911, and took effect from January 1, 1912. Since then I have kept myself fairly busy sending reports from time to time to the acting Director of the Division of Intercourse and Education on those current events that appeared to me to be worthy of his attention as well as that of your Executive Committee. On two occasions, November 1, 1912, and October 24, 1913, in pursuance of the standing instructions of Dr. Nicholas Murray Butler, I addressed him the so-called annual reports. These reports were intended as a sort of a mental balance sheet in which the manifestations of the activities of your Endowment in this country were summed up in what the French would call *coup d'œil*. Growth of Internationalism in Japan; Report to the Trustees of the Endowment

The twentieth century, a time of profound disillusionment with nationalism, was also the great age of internationalism. To the twenty-first-century historian, the period from the late nineteenth century until the end of the Cold War is distinctive for its nationalist preoccupations, while internationalism is often construed as the purview of ideologues and idealists, a remnant of Enlightenment-era narratives of the progress of humanity into a global community. Glenda Sluga argues to the contrary, that the concepts of nationalism and internationalism were very much entwined throughout the twentieth century and mutually shaped the attitudes toward interdependence and transnationalism that influence global politics in the present day. *Internationalism in the Age of Nationalism* traces the arc of internationalism through its rise before World War I, its apogee at the end of World War II, its reprise in the global seventies and the post-Cold War nineties, and its decline after 9/11. Drawing on original archival material and contemporary accounts, Sluga focuses on specific moments when visions of global community occupied the liberal political mainstream, often through the maneuvers of iconic organizations such as the League of Nations and the United Nations, which stood for the sovereignty of nation-states while creating the conditions under which marginalized colonial subjects and women could make their voices heard in an international arena. In this retelling of the history of the twentieth century, conceptions of sovereignty, community, and identity were the objects of trade and reinvention among diverse intellectual and social communities, and internationalism was imagined as the means of national independence and national rights, as well as the antidote to nationalism. This innovative history highlights the role of internationalism in the evolution of political, economic, social, and cultural modernity, and maps out a new way of thinking about the twentieth century.

Teaching Chemistry in Higher Education celebrates the contributions of Professor Tina Overton to the scholarship and practice of teaching and learning in chemistry education. Leading educators in United Kingdom, Ireland, and Australia—three countries where Tina has had enormous impact and influence—have contributed chapters on innovative approaches that are well-established in their own practice. Each chapter introduces the key education literature underpinning the approach being described. Rationales are discussed in the context of attributes and learning outcomes desirable in modern chemistry curricula. True to Tina's personal philosophy, chapters offer pragmatic and useful guidance on the implementation of innovative teaching approaches, drawing from the authors' experience of their own practice and evaluations of their implementation. Each chapter also offers key guidance points for implementation in readers' own settings so as to maximise their adaptability. Chapters are supplemented with further reading and supplementary materials on the book's website (overtonfestschrift.wordpress.com). Chapter topics include innovative approaches in facilitating group work, problem solving, context- and problem-based learning, embedding transferable skills, and laboratory education—all themes relating to the scholarly interests of Professor Tina Overton. Teaching Chemistry in Higher Education

In a town slowly being destroyed by rising tides, one girl must fight to find a way to keep her community's spirit from drowning. For thirteen-year-old Jillian Robichaux, three things are sacred: bayou sunsets, her grandmother Nonnie's stories, and the coastal Louisiana town of Boutin that she calls home. When the worst flood in a century hits, Jillian and the rest of her community band together as they always do—but this time the damage may simply be too great. After the local school is padlocked and the bridges into town condemned, Jillian has no choice but to face the reality that she may be losing the only home she's ever had. But even when all hope seems lost, Jillian is determined to find a way to keep Boutin and its indomitable spirit alive. With the help of friends new and old, a loveable golden retriever, and Nonnie's storytelling wisdom, Jillian does just that in this timely and heartfelt story of

family, survival, and hope. In her stunning debut middle grade novel, Sarah Guillory has written a lush story about an indomitable girl fighting against the effects of climate change.

Twelve-year-old Mimi Laskaris is inspired by the Wijzen sisters of Bali to turn her focus from classical piano to a new obsession: forming a grassroots, kid-led movement to ban plastic bags in her new island home in Florida. Written in accessible verse, this timely story of environmental activism has extensive back matter for aspiring activists. With a foreword by Melati Wijzen, cofounder of Bye, Bye Plastic Bags. Mimi has a plan for her seventh grade year: play piano in the Young Artists competition at Carnegie Hall with her best friend, Lee; enjoy a good old Massachusetts snow day or two; and work in her community garden plot with her dad. But all that changes when her family's Greek restaurant falls on hard times. The Laskarises' relocation to Wilford Island, Florida, is a big key change for Mimi. Where does she fit in in this shell-covered paradise without Lee? Mimi is taken by the beauty of the island and alarmed by the plastic pollution she sees on the beaches. Then her science teacher, Ms. Miller, shows her class a TED Talk by Melati and Isabel Wijzen. At ages twelve and ten, they lobbied to ban single-use plastic bags on their home island of Bali—and won. Their story strikes a chord for Mimi. She's twelve. Could a kid like her make such a big change in a place that she's not yet sure feels like home? Can she manage to keep up with piano, her schoolwork, and activism? And does confident and flawless Carmen Alvarez-Hill really want to help her with the movement? In this story of environmental activism, friendship, and self-discovery, Mimi figures out what's truly important to her, and takes her place in the ranks of real-life youth activists like the Wijzen sisters, Greta Thunberg, and Isra Hirs.

Nowhere Better Than Here

This book develops the notion of 'knowledge cultures' as a basis for understanding the possibilities of education and development in the age of knowledge capitalism. 'Knowledge cultures' refers to the cultural preconditions in the new production of knowledge and their basis in shared practices, embodying preferred ways of doing things often developed over many generations. These practices also point to

the way in which cultures have different repertoires of representational and non-representational forms of knowing. The book discusses knowledge cultures in relation to claims for the new economy, as well as cultural economy and the politics of postmodernity. It focuses on national policy constructions of the knowledge economy, 'fast knowledge' and the role of the so-called 'new pedagogy' and social learning under these conditions.

Save the Bees

This book explores a new pedagogical model called The Third Model, which places the encounter between the child and the curriculum at the center of educational theory and practice. The Third Model is implemented in an alternative classroom called Community of Thinking. Teaching and learning in a Community of Thinking is based on three "stations": the fertile question; research; and concluding performance. The essence of a Community of Thinking is the formation of a group of students and teachers who grapple with a troubling question to which they do not know the answer at the outset – and sometimes even at the end of their investigation. The Community of Thinking framework is supported by a whole school model – the Intel-Lect School. The model, or parts of it, is currently implemented in schools in Israel, England, Australia, and New Zealand. The book suggests a new pedagogical narrative based on alternative "atomic pictures" of learning, teaching, knowledge, mind and the aim of education, and a systematic pedagogical practice based on this narrative.

'Key implications' are drawn out at appropriate points, and throughout the book students are provided with strategies for interrogating evidence. Key terms are glossed throughout the book and chapters are summarised and followed by suggestions for further reading. A chapter on Learning interactions and social worlds is new to this edition. The following chapters have all been extensively updated: Learning Assessment Individual differences and achievement Student engagement and motivation The educational context Society and culture Language Literacy Inclusive education and special educational needs Behaviour problems Dealing with behaviour problems. Research Anthology on Applying Social Networking Strategies to Classrooms and Libraries

Since the release of the very successful first edition in 2001, the field of emotional intelligence has grown in sophistication and importance. Many new and talented researchers have come into the field and techniques in EI measurement have dramatically increased so that we now know much more about the distinctiveness and utility of the different EI measures. There has also been a dramatic upswing in research that looks at how to teach EI in schools, organizations, and families. In this second edition, leaders in the field present the most up-to-date research on the assessment and use of the emotional intelligence construct. Importantly, this edition expands on the previous by providing greater coverage of emotional intelligence interventions. As with the first edition, this second edition is both scientifically rigorous, yet highly readable and accessible to a non-specialist audience. It will therefore be of value to researchers and practitioners in many disciplines beyond social psychology, including areas of basic research, cognition and emotion, organizational selection, organizational training, education, clinical psychology, and development psychology.

Presents a solid overview of Emotional Intelligence, its connection to other leadership theories, and its particular application to academic librarianship.

Academic Librarians as Emotionally Intelligent Leaders

Nowadays, not only psychologists are interested in the study of Emotional Intelligence (EI). Teachers, educators, managers, employers, and people, in general, pay attention to EI. For example, teachers would like to know how EI could affect student's academic results, and managers are concerned about how EI influences their employees' performance. The concept of EI has been widely used in recent years to the extent that people start to applying it in daily life. EI is broadly defined as the capacity to process and use emotional information. More specifically, according to Mayer and Salovey, EI is the ability to: "1) accurate perception, appraise, and expression of emotion; 2) access and/or generation of feelings when they facilitate thought; 3) understand emotions and emotional knowledge; and 4) regulate emotions to promote emotional and intellectual growth" (Mayer and Salovey 1997, p. 10). When new information arises into one specific area of knowledge, the work of the scientists is to investigate the relation between this new information and other established concepts. In this sense, EI could be considered as a new framework to explain human behaviour. As a young concept in Psychology, EI could be used to elucidate the performance in the activities of everyday life. Over the past two decades, studies of EI have tried to delimitate how EI is linked to other competences. A vast number of studies have reported a relation between EI and a large list of competences such as academic and work success, life satisfaction, attendance to emotions, assertiveness, emotional expression, emotional-based decision making, impulsive control, stress management, among others. Moreover, recent researches have shown that EI plays an important role in the prediction of behaviour besides personality and cognitive factors. However, it is not until quite recently, that studies on EI have considered the importance of individual differences in EI and their interaction with cognitive abilities. The general issue of this Research Topic was to expose the role of individual differences on EI in the development of a large number of competencies that support a more efficient performance in people's everyday life. The present Research Topic provides an extensive review that may give light to the better understanding of how individual differences in EI affect human behaviour. We have considered studies that analyse: 1) how EI contributes to emotional, cognitive and social process beyond the well-known contribution of IQ and personality traits, as well as the brain system that supports the EI; 2) how EI contributes to relationships among emotions and health and well-being, 3) the roles of EI during early development and the evaluation in different populations, 4) how implicit beliefs about emotions and EI influence emotional abilities.

Individual sources, Dynamics and Expressions of Emotions

The ability to identify, understand, and manage one's emotions are critical life skills that serve students throughout their academic careers and beyond. Acquisition of these skills, the foundation of which is self awareness, enhances students' overall emotional wellbeing, reduces problem behaviors, improves academic outcomes, and prepares them to meet future challenges. Recognizing the importance of emotional literacy, more and more schools are adopting social and emotional learning programs. The book *Understanding Emotions in the Classroom* is a valuable resource for educators seeking to initiate or improve social and emotional learning initiatives both in the classroom and school wide.

Understanding Emotions in the Classroom

Situations that are perceived to be personally important typically evoke intense mood states and emotions; individuals will try to control mood states and emotions, and mood and emotions influence our thoughts and behaviours. Providing the sound knowledge base is a driving factor behind a great deal of the ensuing research and forms the content of many of the chapters of this book. The book covers many aspects of mood in performance settings. Chapters focus on the nature of mood, the validity of mood measures and applied research. Theoretical issues on the nature of mood and a conceptual model of mood-performance relationships in sport is reviewed. Chapters include

research on relationships between mood and performance, motivation, coping strategies, personality, eating attitudes, humour, and emotional intelligence. Mood responses to intense exercise, extreme environments, aqua-massage, and interventions to enhance mood are also covered. Each chapter provides recommendations for future research.

Emotional Intelligence in Action

The rapidly growing recognition of the importance of emotions in understanding all aspects of organizational life is facilitating the development of focused areas of scholarship. This volume addresses new ways of looking at emotions within organizational frameworks.

Practical Sports Coaching

This volume presents research from a variety of perspectives on the enhancement of human intelligence. It is organized around five themes - enhancement via instruction; enhancement via development (over the life cycle); enhancement over time; enhancement via new constructs; and new directions in enhancement. Three key issues are addressed: First, although most of the scientific research on intelligence has concerned what it is, this volume attends to the consequential societal and economic issue concerns of whether it can be increased, and how. Second, intellectual enhancement is particularly important when targeted to minorities and the poor, groups that have typically performed relatively less well on intelligence and achievement measures. This volume reflects the education community's ongoing interest in understanding, and attempting to close, achievement or test score gaps. Third, most of the attention to examining intellectual enhancement, and in accounting for and closing the test-score gap, has focused on general cognitive ability. In line with the current emphasis on considering intelligence from a wider perspective, this volume includes constructs such as emotional and practical intelligence in definitions of intellectual functioning. *Extending Intelligence: Enhancement and New Constructs* is an essential volume for researchers, students, and professionals in the fields of educational psychology, intelligence, educational measurement and assessment, and critical thinking.

New Ways of Studying Emotions in Organizations

This book provides a comprehensive overview and in-depth analysis of research on psychosocial skills, examining both theory and areas of application. It discusses students' psychosocial skills both as components of academic success and desired educational outcomes in grades K through 12. The book describes an organizing framework for psychosocial skills and examines a range of specific constructs that includes achievement, motivation, self-efficacy, creativity, emotional intelligence, resilience, and the need for cognition. Measures of Personality and Social Psychological Constructs assists researchers and practitioners by identifying and reviewing the best scales/measures for a variety of constructs. Each chapter discusses test validity, reliability, and utility. Authors have focused on the most often used and cited scales/measures, with a particular emphasis on those published in recent years. Each scale is identified and described, the sample on which it was developed is summarized, and reliability and validity data are presented, followed by presentation of the scale, in full or in part, where such permission has been obtained. Measures fall into five broad groups. The emotional disposition section reviews measures of general affective tendencies, and/or cognitive dispositions closely linked to emotion. These measures include hope and optimism, anger and hostility, life satisfaction, self-esteem, confidence, and affect dimensions. Emotion regulation scales go beyond general dispositions to measure factors that may

contribute to understanding and managing emotions. These measures include alexithymia, empathy, resiliency, coping, sensation seeking, and ability and trait emotional intelligence. The interpersonal styles section introduces some traditional social-psychological themes in the context of personality assessment. These measures include adult attachment, concerns with public image and social evaluation, and forgiveness. The vices and virtues section reflects adherence to moral standards as an individual characteristic shaped by sociocultural influences and personality. These measures include values and moral personality, religiosity, dark personalities (Machiavellianism, narcissism, and sub-clinical psychopathy), and perfectionism. The sociocultural interaction and conflict section addresses relationships between different groups and associated attitudes. These measures include cross-cultural values, personality and beliefs, intergroup contact, stereotyping and prejudice, attitudes towards sexual orientation, and personality across cultures. Encompasses 25 different areas of psychology research. Each scale has validity, reliability info, info on test bias, etc. Multiple scales discussed for each construct. Discussion of which scales are appropriate in which circumstances and to what populations. Examples of scales included.

Measures of Personality and Social Psychological Constructs

Emotional intelligence is a very popular concept since it was made known to the general public in 1995. However, it was under severe criticisms among scientific researchers and a lot of them did not believe that it should be accepted by scientists as true knowledge. The author of this book, who is one of the pioneers in this topic, spent sixteen years to study this concept. Together with other researchers, they gradually changed the conclusion of early researchers. Using rigorously scientific standards, this research team demonstrated that emotional intelligence is an intelligence dimension that has significant impact on various life outcomes such as life satisfaction and job performance. They developed testable theoretical framework for emotional intelligence in the workplace, and attempted to show that the trainability of emotional intelligence is larger than traditional intelligence concept. The book looks at, not only the scientific reports, but all the stories behind some of the rigorous scientific studies in the author's 18-year journey. Their choice of research designs and how the designs are suitable to provide scientific evidence to demonstrate the validity of emotional intelligence are also described. Through this book, the process of scientific enquiry and important issues concerning the emotional intelligence concept are revealed in details by vivid stories and rigorous scientific reports.

Managing human emotions plays a critical role in everyday functioning. After years of lively debate on the significance and validity of its construct, emotional intelligence (EI) has generated a robust body of theories, research studies, and measures. *Assessing Emotional Intelligence: Theory, Research, and Applications* strengthens this theoretical and evidence base by addressing the most recent advances and emerging possibilities in EI assessment, research, and applications. This volume demonstrates the study and application of EI across disciplines, ranging from psychometrics and neurobiology to education and industry. *Assessing Emotional Intelligence* carefully critiques the key measurement issues in EI, and leading experts present EI as eminently practical and thoroughly contemporary as they offer the latest findings on: EI instruments, including the EQ-I, MSCEIT, TEIQue, Genos Emotional Intelligence Inventory, and the Assessing Emotions Scale. The role of EI across clinical disorders. Training professionals and staff to apply EI in the workplace. Relationships between EI and educational outcomes. Uses of EI in sports psychology. The cross-cultural relevance of EI. As the contributors to this volume in the Springer Series on Human Exceptionality make clear, these insights and methods hold rich potential for professionals in such fields as social and personality psychology, industrial and organizational psychology, psychiatry, business, and education.

Psychometrics in Coaching

"As expected, this book is complex but it is also engaging, thought-provoking, and exciting because it helps nurses and other readers think deeply about meeting the needs of patients at their most vulnerable moments. Score: 94, 4 Stars--Doody's Medical Reviews Callista Roy, one of nursing's leading theorists and creator of the widely used Roy Adaptation Model of Nursing, presents a unique pathway for developing knowledge for nursing practice. Her book distills the most relevant information from 200 published research studies to provide a roadmap for progressing from nursing research to middle-range theory to optimum practice regimens. It is based on tested knowledge, clear evidence, and refined caring perspectives. Step by step, the text identifies and critiques research suited for developing cumulative knowledge for practice and uses the research to develop middle-range theories that apply across all health care settings. It then presents the evidence for practice for each middle range theory, refocuses EBP within nursing knowledge and within defined levels of readiness for practice, and recommends changes for practice based on evidence. Grounded in the Roy Adaptation Model of Nursing, the book provides a single conceptual basis for synthesis of research into middle range theories for use across all patient populations. It clarifies ways to select research from one conceptual basis to build middle-range theories, how to classify evidence for practice by levels of readiness, and recommend research-based changes in practice. The text includes quantitative and qualitative research designs and offers instruments to measure major concepts for implementation. Also included are plentiful examples, tables that display values across studies, definitions of major terms and concepts, and diagrams of concepts. Supplementing the text is a faculty guide for using the text to teach critical thinking at multiple graduate levels and videos illuminating each section of the book. Key Features: Explains clearly how middle-range theories grow from research Designed for implementation in practice Uses Roy's five core 'adaptation' contexts as organizing themes: coping, changing life events, loss, chronic health condition, and traumatic events Constitutes a seminal work from a pre-eminent nursing theorist and educator Includes faculty guide and videos elucidating each section of the book

Oxford Companion to Emotion and the Affective Sciences

Emotion management is an important source of social capital and synergy for organizations. Managers have a great role in the creation of this synergy. A manager who can cope with their emotions indirectly contributes to organizational effectiveness. This situation is especially important in human-oriented organizations providing services rather than goods, such as educational institutions. Leadership is a process of social influence, which maximizes the efforts of others towards the achievement of a goal. Leadership stems from social influence rather than authority or power. In terms of system approach, the input, output, process, and feedback of educational organizations are always related to human behaviors. Therefore, organizations must address the nature of human beings in all of their managerial processes. Although organizations, in which people are at the foreground, try to continue their functioning on a rational and formal basis throughout the managerial process, they sometimes have to manage emotional and informal phenomena. In this case, there is a need for managers and school leaders who can shape the rationale in line with the requirements of human nature. What is expected from this administrator is that they do not ignore human needs and emotions while providing the management of educational institutions. For this reason, these managers should be "leaders" rather than "executives" who only work in a formal framework of organization management. Moreover, principals and teachers should also be leaders in all educational processes. Emotions are the main catalyst of positive organizational culture. Leaders can create an effective organizational culture with the main source of positive emotions between employers. Positive emotions also motivate employees for organizational purposes. If a leader wishes to create and maintain an effective organizational culture, it is essential to support positive behavior and emotional climate in their institutes and schools. Leaders-school-managers and teachers, therefore, need to develop emotion management abilities. Educational organizations need to shape their organizational culture, climate, and psychology to support their leaders in efficiently managing their employees' emotions. Up to now, this topic has

been usually addressed as the main catalyst and a sub-dimension of emotional intelligence. Moreover, current evidence classifies social and empathy skills as other sub-dimensions of emotional intelligence. For this reason, this collection of peer-reviewed articles will draw attention to the contemporary term "emotional management" and contribute to educational fields by means of exploring the relationship between emotions and leadership.
