Lab Manual for Human Biology

The laboratory exercises in this manual are coordinated with Inquiry into Life, a general biology text that covers the entire field of biology. The text emphasizes how we can apply biological knowledge to our own lives and to the biological world in general. Although each laboratory is referenced to the appropriate chapter(s) in Inquiry, this manual may also be used in coordination with other general biology texts. In addition, this laboratory manual can be adapted to a variety of course orientations and designs. There are a sufficient number of laboratories and exercises within each lab to tailor the laboratory experience as desired. Then, too, many exercises may be performed as demonstrations rather than as student activities, thereby shortening the time required to cover a particular concept.

Lab Manual t/a Concepts of Biology

Designed for the one-semester human biology course, this full-color manual offers activities for 23 laboratory sessions in a variety of formats to allow the instructor to customize these exercises to the needs of their course. The lab manual's depth of coverage invites students to explore fundamental concepts of human biology in a laboratory setting.

Lab Manual to accompany Biology

This four-color lab manual contains 21 lab exercises, most of which can be completed within two hours and require minimal input from the instructor. To provide flexibility, instructors can vary the length of most exercises, many of which are divided into several parts, by deleting portions of the procedure without sacrificing the overall purpose of the experiment. Taking a consistent approach to each exercise, the second edition provides an even clearer presentation, updated coverage, and increased visual support to enable students to apply concepts from the Human Biology course.

Human Biology

The laboratory exercises in this manual are coordinated with Human Biology, a text that has two primary functions: 1) to understand how the human body works and 2) to understand the relationship of humans to other living things in the biosphere. This laboratory manual can be adapted to a variety of course orientations and designs. There are a sufficient number of laboratories to permit a choice of activities over the length of the course. Many activities may be performed as demonstrations rather than as student activities, thereby shortening the time required to cover a particular concept.
