### Keep Talking

This hugely influential study on the psychology of authoritarianism was written in answer to Hitler's Germany—and now rings more relevant than ever as fascism and anti-Semitism sweep across America. What makes a fascist? Are there character traits that make someone more likely to vote for the far right? The Authoritarian Personality is not only one of the most significant works of social psychology ever written, it also marks a milestone in the development of Adorno's thought, showing him grappling with the problem of fascism and the reasons for Europe's turn to reaction. Over half a century later, and with the rise of right-wing populism and the reemergence of the far-right in recent years, this hugely influential study remains as insightful and relevant as ever. This new edition includes an introduction by Frankfurt School scholar Peter E. Gordon and contains the first-ever publication of Adorno's subsequent critical notes on the project. "Adorno and his colleagues could easily have been describing Alex Jones's paranoid InfoWars rants or the racist views expressed by many Trump supporters." —Molly Worthen, New York Times

There are many questions about the mathematical preparation teachers need. Recent recommendations from a variety of sources state that reforming teacher preparation in postsecondary institutions is central in providing quality mathematics education to all students. The Mathematics Teacher Preparation Content Workshop examined this problem by considering two central questions: What is the mathematical knowledge teachers need to know in order to teach well? How can teachers develop the mathematical knowledge they need to teach well? The Workshop activities focused on using actual acts of teaching such as examining student work, designing tasks, or posing questions, as a medium for teacher learning. The Workshop proceedings, *Knowing and Learning Mathematics for Teaching*, is a collection of the papers presented, the activities, and plenary sessions that took place.
