Coordinate Geometry, Basic Introduction, Practice Problems - Coordinate Geometry, Basic Introduction, Practice Problems by The Organic Chemistry Tutor 371,434 views 6 years ago 33 minutes - This video tutorial provides a basic introduction into **coordinate geometry**,. It contains plenty of examples and practice problems.

find the x and y coordinate of point b

calculate the area of a right triangle

the end points of a diameter of a circle  
identify the coordinates of the center of the circle  
get the midpoint between two points  
calculate the radius of the circle  
calculate the circumference and the area of the circle  
draw the radius to a tangent line  
use the slope-intercept formula  
calculate the slope of the perpendicular line  
find a slope of a perpendicular line  
use the slope-intercept form  
start with the slope-intercept form  
put it in standard form  
calculate the x and the y intercepts  
travel 4 units along the y axis  
calculate the distance between two points in three dimensions  
distance is the perpendicular distance between the line and the point  
calculate the area of the shaded region  
convert 16 pi into a decimal  
calculate the area of an equilateral  
split the triangle into two triangles  
find the midpoint

calculate the slope of segment bm  
use the point-slope formula

Introduction

You work at a shoe factory, and you're working on creating boxes with pairs of shoes. Currently in front of you, imagine there are 3 pairs of shoes (for a total of 6 individual shoes) with the following sizes: 2 size 4s, 2 size 5s, 2 size 6s. The factory defines an "acceptable" pair as 2 shoes that differ in size by a maximum of 1 size — so a shoe with size 5 and a shoe with size 6 would count as an "acceptable" pair. If you close your eyes, and randomly pick 3 pairs of shoes, without replacement, what is the probability that you end up drawing 3 acceptable pairs?

The candidate asks clarifying questions

The candidate breaks down the question and starts brainstorming solutions

Our instructor analyzes the candidate's initial response to the question and points out what he did well

The candidate walks through the methodology for his solution, and solves the question correctly.

Our instructor explains the theory behind this question, and whiteboards a solution for this question. He also shows a snippet of the written detailed solution from The Quant Guide course, along with a Python code simulation which shows that the final answer approaches  $1/3$  with infinite trials. Here's a written solution from the course

The interviewer asks the second question. Say you're flipping a fair coin until you obtain the first H. If the first H occurs on the k'th flip, you're given k balls. We're going to randomly put these k balls into 3 bins, labeled 1 2 and 3. Find the probability that none of these 3 bins end up empty.

The candidate dissects the question and asks clarifying questions.

The candidate works through some examples and logically breaks the question down to answer the question effectively.

The candidate has answered the question correctly, and now summarizes his approach.

Our instructor breaks down the approach the candidate used and whiteboards the fundamental probability theory behind this question.
