Chemistry Lecture #21: Energy Levels, Energy Sublevels, Orbitals, & the Pauli Exclusion Principle In the Bohr model of the atom, electrons circle the nucleus in the same way that planets orbit the sun.

Maximum number of electrons = $2n^2$

Within each energy level are sublevels. The sublevels are labeled s, p, d, and f. You need to memorize these 4 sublevels.

Within each sublevel, there are orbitals. This is the final location where electrons reside.

We will be using arrows to symbolize spinning electrons.
