

Russia's Energy Policies National Interregional And Global Levels

[#Russia energy policy](#) [#Russian energy strategy](#) [#Global energy geopolitics](#) [#National energy security Russia](#) [#Interregional energy cooperation](#)

This analysis delves into Russia's multifaceted energy policies, exploring their profound impact across national, interregional, and global scales. It examines the strategic drivers behind Russia's energy strategy, its pivotal role in global energy geopolitics, and how these policies influence national energy security and interregional cooperation.

Russia's Energy Policies

'Russia is an increasingly important player in global energy markets, yet its policies are under-researched and little understood. This collection represents an important and sophisticated contribution to the debate. While much of the commentary on Russian energy consists of generalizations about Russia's political strategy, this work lifts the lid and looks inside the process through which Russian energy policies are designed and implemented. It brings together essays by top specialists in the field, and makes a conscious effort to integrate the various disciplines of politics, economics and geography by developing a model of the "cognitive frames" through which the policy process is shaped. It addresses both domestic and international dimensions of the problem, and gives equal weight to traditional customers in Europe and new markets in Asia.' Peter Rutland, Wesleyan University, US

'The book explains Russian energy policies, instead of a policy. It portrays a picture with multiple policy drivers, including institutional, regional and federal, environmental and commercial. The study markedly improves our understanding of the multifaceted nature of Russian energy policy, a topical and complex issue. This is a highly commendable book that should be included in the reading lists of anyone with an interest in the role of energy in Russia's political economy or energy matters more generally.' Kim Talus, University College London, Australia

Russia's vast energy reserves, and its policies towards them have enormous importance in the current geopolitical landscape. This important book examines Russia's energy policies on the national, interregional and global level. It pays particular attention to energy policy actors ranging from state, federal and regional actors, to energy companies and international financial actors and organizations. The book models the formation of Russia's energy policies in terms of how energy policy actors perceive and map their policy environment. The case studies cover federal, regional and environmental aspects of Russian energy policy, Russia's energy relations with Europe and the CIS, North East Asia, the globalization of Russian oil companies and the political economy of Russian energy. It is found that there are several concurrent energy policies in contemporary Russia, and that this situation is likely to continue. These policies are conducted primarily from the

business frame perspective while notions of energy superpower Russia are found more ambiguous. Russia's Energy Policies will benefit advanced master's level students, doctoral students, researchers, policy-makers and practitioners. The book will be a great resource for advanced international relations, political economy, international business and globalisation courses alongside energy policy courses, as well as area studies courses on Russian, post-Soviet and European politics and environmental politics.

Global Renewables Outlook: Energy Transformation 2050

This outlook highlights climate-safe investment options until 2050, policies for transition and specific regional challenges. It also explores options to eventually cut emissions to zero.

Global Value Chain Development Report 2021

A radical shift is underway in global value chains as they increasingly move beyond traditional manufacturing processes to services and other intangible assets. Digitization is a leading factor in this transformation, which is being accelerated by the coronavirus disease (COVID-19) pandemic. The Global Value Chain Development Report, the third of a biennial series, explores this shift beyond production. The report shows how the rise of services value chains offers a new path to development and how protectionism and geopolitical tensions, environmental risks, and pandemics are undermining the stability of global value chains and forcing their reorganization geographically. It is co-published by the WTO, the Asian Development Bank, the Research Institute for Global Value Chains at the University of International Business and Economics, the Institute of Developing Economies, and the China Development Research Foundation.

Innovate Indonesia

New technologies present governments with opportunities and challenges in a range of key policy areas such as employment, competitiveness, equity, and sustainability. A consensus is that the national government can play an important role in stimulating innovation. This report explores policy options to facilitate Indonesia's technological transformation and unlock its economic growth potential.

Global Economic Prospects, January 2020

Global growth is projected to be slightly faster in 2020 than the post-crisis low registered last year. While growth could be stronger if reduced trade tensions lead to a sustained reduction in uncertainty, the balance of risks to the outlook is to the downside. Growth in emerging market and developing economies is also expected to remain subdued, continuing a decade of disappointing outcomes. A steep and widespread productivity growth slowdown has been underway in these economies since the global financial crisis, despite the largest, fastest, and most broad-based accumulation of debt since the 1970s. In addition, many emerging market and developing economies, including low-income countries, face the challenge of phasing out price controls that impose heavy fiscal cost and dampen investment. These circumstances add urgency to the need to implement measures to rebuild macroeconomic policy space and to undertake reforms to rekindle productivity growth. These efforts need to be supplemented by policies to promote inclusive and sustainable long-term growth and accelerate poverty alleviation. Global Economic Prospects is a World Bank Group Flagship Report that examines global economic developments and prospects, with a special focus on emerging market and developing countries, on a semiannual basis (in January and June). The January edition includes in-depth analyses of topical policy challenges faced by these economies, whereas the June edition contains shorter analytical pieces.

Asian Economic Integration in an Era of Global Uncertainty

The Pacific Trade and Development (PAFTAD) conference series has been at the forefront of analysing challenges facing the economies of East Asia and the Pacific since its first meeting in Tokyo in January 1968. The 38th PAFTAD conference met at a key time to consider international economic integration.

Earlier in the year, the people of the United Kingdom voted to leave the European Union and the United States elected Donald Trump as their next president on the back of an inward-looking ‘America First’ promise. Brexit and President Trump represent a growing, and worrying, trend towards protectionism in the North Atlantic countries that have led the process of globalisation since the end of the Second World War. The chapters in the volume describe the state of play in Asian economic integration but, more importantly, look forward to the region’s future, and the role it might play in defending the global system that has underwritten its historic rise. Asia has the potential to stand as a bulwark against the dual threats of North Atlantic protectionism and slowing trade growth, but collective leadership will be needed regionally and difficult domestic reforms will be required in each country.

Part I of this report assesses trends and developments in regional trade and investment flows and policies in an attempt to provide the insights and information necessary to separate the cyclical from the structural aspects. Part II analyses the participation of Asia-Pacific economies in global and regional value chains. By observing how economies at different levels of development have integrated into supply chains at different speeds and to varying extents, we can cast light on those policies that influence and shape value chain participation, and hence influence future patterns of trade and investment. The particular features of participation in value chains also have an impact on the ability of countries to access foreign technology and build innovative capacity, which in turn influences structural change and future development options.

Asia-Pacific Trade and Investment Report 2015

This book offers meaningful insights into an impending challenge for the energy industry, namely the increasing role of asset management amongst the utilities’ core operations. In the aftermath of energy digitalization, power and gas companies will be able to seize asset productivity—through risk-based operation and maintenance—and better balance capital and operational expenditures. By addressing the asset management of both power and gas infrastructures, and by adopting a comprehensive approach—including regulation and business models, as well as a solid technology background—this book offers a unique perspective on the energy utilities’ transformation journey and the road to optimal decision-making for both asset portfolio expansion and replacement. The asset management end-to-end mission requires appropriate internal governance—depending on the business framework—and the development of decision aid models (for asset replacement and maintenance), supported on probabilistic risk and reliability indexes. This book advocates systematically digitalizing the power and gas assets, addressing both data governance and infrastructure, alongside real-time equipment condition monitoring. It also provides a meaningful methodology for designing data-centric asset management and predictive operation and maintenance, using artificial intelligence and engineering-based approaches. As such, it provides valuable strategy, methods and models—illustrated by case studies and proofs of concept—for a wide range of stakeholders, including utilities and industry professionals, regulators, policy-makers, researchers and students.

Power and Gas Asset Management

An interdisciplinary survey addressing the problems of overfishing worldwide, and the best way forward toward good ecological practice and global cooperative governance.

Industry 4.0

This book presents different aspects of renewable energy integration, from the latest developments in renewable energy technologies to the currently growing smart grids. The importance of different renewable energy sources is discussed, in order to identify the advantages and challenges for each technology. The rules of connecting the renewable energy sources have also been covered along with practical examples. Since solar and wind energy are the most popular forms of renewable energy sources, this book provides the challenges of integrating these renewable generators along with some innovative solutions. As the complexity of power system operation has been raised due to the renewable energy integration, this book also includes some analysis to investigate the characteristics of power systems in a smarter way. This book is intended for those working in the area of renewable energy integration in distribution networks.

The GIWA Final Report provides a comprehensive review of the most important findings from the GIWA regional reports. It summarises the major transboundary concerns and their environmental and socio-economic impacts. To better understand these concerns and develop solutions to address them, the Report identifies the root causes and draws policy relevant conclusions. It also outlines knowledge gaps which impede the sustainable management of international waters.

Originally published in French as "La Philosophie, une Ecole de la Liberte. Enseignement de la philosophie et apprentissage du philosophe : Etat des lieux et regards pour l'avenir." - This study is dedicated to all those who engaged themselves, with vigour and conviction, in the defence of the teaching of philosophy a fertile guarantor of liberty and autonomy. This publication is also dedicated to the young spirits of today, bound to become the active citizens of tomorrow.

Challenges to International Waters

This study presents options to speed up the deployment of wind power, both onshore and offshore, until 2050. It builds on IRENA's global roadmap to scale up renewables and meet climate goals.

Philosophy, a School of Freedom

Provides alternative solutions to such global problems as population control, emerging water shortages, eroding soil, and global warming, outlining a detailed survival strategy for the civilization of the future.

Ever since the Industrial Revolution of the late-eighteenth and early-nineteenth centuries, industrialization has been the key to modern economic growth. The fact that modern industry originated in Britain, and spread initially to north-western Europe and North America, implied a dramatic divergence in living standards between the industrial North (or 'West') and a non-industrial, or even de-industrializing, South (or 'Rest'). This nineteenth-century divergence, which had profound economic, military, and geopolitical implications, has been studied in great detail by many economists and historians. Today, this divergence between the 'West' and the 'Rest' is visibly unravelling, as economies in Asia, Latin America and even sub-Saharan Africa converge on the rich economies of Europe and North America. This phenomenon, which is set to define the twenty-first century, both economically and politically, has also been the subject of a considerable amount of research. Less appreciated, however, are the deep historical roots of this convergence process, and in particular of the spread of modern industry to the global periphery. This volume fills this gap by providing a systematic, comparative, historical account of the spread of modern manufacturing beyond its traditional heartland, to Southern and Eastern Europe, the Middle East, Asia, Africa, and Latin America, or what we call the poor periphery. It identifies the timing of this convergence, finding that this was fastest in the interwar and post-World War II years, not the more recent 'miracle growth' years. It also identifies which driving forces were common to all periphery countries, and which were not.

Plan B 3.0: Mobilizing to Save Civilization (Substantially Revised)

The opportunities and comfortable lifestyle available to most Australians have been denied to generations of Indigenous people. As a result some of Australia's original inhabitants suffer from what has been described as 'Fourth World' standards of health. This is out of place in a country that prides itself on egalitarianism and a fair go for all. Shifting the focus from individual behaviour, to the social and political circumstances that influence people's lives and ultimately their health, helps us to understand the origins of poor health. It can also guide action to bring about change. Social Determinants of Indigenous Health offers a systematic overview of the relationship between the social and political environment and health. Highly respected contributors from around Australia examine the long-term health impacts of the Indigenous experience of dispossession, colonial rule and racism. They also explore the role of factors such as poverty, class, community and social capital, education, employment and housing. They scrutinise the social dynamics of making policy for Indigenous Australians, and the interrelation between human rights and health. Finally, they outline a framework for effective health interventions, which take social factors into consideration. This is a groundbreaking work, developed in consultation

with Indigenous health professionals and researchers. It is essential reading for anyone working in Indigenous health.

The Spread of Modern Industry to the Periphery since 1871

An introduction to the works of authoritative and innovative Chinese authors whose writings focus on the future of the Chinese military. These carefully selected, representative essays make Chinese military thinking more accessible to western readers. It reveals, for example, China's keen interest in the Revolution in military affairs. This volume is an important starting point for understanding China's future military modernization. "Must reading for every executive of every Western firm doing business in China." "Readers will be impressed by China's ambitions in space, information warfare, stealth, and robots, in future warfare." Photos.

The Fifth Estate: Think Tanks, Public Policy, and Governance is a comprehensive look at think tanks and the important role they play in shaping public policy and public discourse in the United States. Author James G. McGann illustrates the lasting impact of think tanks in today's civil society. A survey that McGann conducted among all the leading think tanks in the United States highlights the progress that think tanks in the United States have made and the challenges they have yet to face. McGann clarifies the correlation between think tank research and the policies enacted by the past three presidential administrations by looking at case studies in both foreign and domestic policy. He also describes a phenomenon known as "the revolving door," where think tanks provide former government officials an opportunity to share insights from public service, remain involved in policy debates, and continue to provide advice and commentary. Based on the history and the level of involvement seen today, the influence of think tanks is unlikely to diminish in the coming years.

Aquaculture Health Management: Design and Operation Approaches is an essential reference for the diverse aquaculture community. With the steadily increasing importance of healthy fish production and the expansion of the animal aquaculture industry to new geographic areas, new microbial and parasitic species with pathogenic potential continue to emerge. The book covers the broad spectrum of fish and shellfish health, the functional roles of pathogen emergence, and the impacts of nutrition and preventative medicine such as pre- and probiotics, as well as chemical treatments, relevant legislation and more. This reference takes a comprehensive approach to understanding overall fish health management, making it valuable to aquaculturists, practitioners in aquatic animal health, veterinarians and all those in industry, government or academia who are interested in aquaculture and fisheries and their sustainable futures. Presents the biosecurity measures used to prevent the spread of disease Discusses fish immunology to help readers understand preventive medicine for a healthy fish production Examines the latest scientific methods and technologies to maximize efficiencies for healthy fish production for farming Includes the most commonly researched fish, crustaceans and mollusks in aquaculture

How Nations Learn

This volume chronicles and analyzes the development of think tanks and public policy research organizations, while exploring the impact think tanks have on politics, public policies, and governance in the US. Think Tanks and Policy Advice in the US investigates the distinctive nature of thirty leading think tanks in America, while capturing the political and intellectual ecology of the more than 1,500 think

tanks in the US. Presidents from twenty think tanks have contributed insightful essays that examine the role, value, and impact of these organizations on a national and global level. The book examines a range of key factors (partisan politics; growth of liberal and conservative advocacy groups; restrictive funding policies of donors; growth of specialized think tanks; narrow and short-term orientation of Congress and the White House; tyranny of myopic academic disciplines; and the 24/7 cable news networks) which have impacted on the ability of think tanks to provide independent analysis and advice. This text fills a gap in the available literature and will serve as a valuable reference tool for policy makers, the media, and researchers in the fields of public policy, political science, and American politics more generally.

Governments throughout the Asia-Pacific region recognize the catalyzing role of infrastructure investment for sustainable growth. Yet, they are faced with the problem of financing new infrastructure. This book provides the latest evidence on the impact of infrastructure investment on economic and social indicators. Presenting several country studies, the book explains how infrastructure investment can increase output, taxes, trade, and firm productivity. Based on this evidence, the book proposes innovative modes of infrastructure financing. Written by leading international experts in economic analysis of infrastructure, the book is an invaluable source for policy makers to better design infrastructure projects.

Think Tanks and Policy Advice in the US

Co-published with the Food and Agriculture Organization of the United Nations. Fisheries management is the process that has evolved to try to ensure that fisheries operate in a manner that provides the immediate benefits in a sustainable manner. The widely accepted goal is that the full range of benefits should not only be available for this generation but for generations to come. Fisheries management has been successful in some cases but there have also been many, many cases of failure. This volume is intended to contribute to improving this unsatisfactory state by addressing the widespread need for information and guidance on the broad and often complex task of fisheries management. It is an updated and expanded edition of the first version of "A fishery manager's guidebook" which was published as a FAO Fisheries Technical Paper in 2002. The major part of this new edition is divided into five parts intended to cover the range of concerns, tools and techniques essential to the modern fisheries manager, whether that manager is an individual or a formal or informal group. Following the Introduction: Part I examines the primary dimensions of fisheries: biological, ecological, social and economic Part II looks at the legal and institutional characteristics of fisheries Part III explores the tools that fishery managers have to achieve the objectives expected from a fishery Part IV discusses the role of scientific information of indicators and reference points Part V moves into implementation of fisheries management and includes a chapter on special considerations in small-scale fisheries This landmark publication is aimed at fishery managers and scientists. All libraries in research establishments and universities where fisheries and aquatic sciences are studied and taught will need copies of this important volume. Fisheries around the world make essential contributions to human well-being including the provision of basic food supplies, employment, recreational opportunities, foreign currency and others, providing benefits to hundreds of millions of people. Despite these benefits, our record of managing fisheries so that the benefits can be sustained has been poor, at best, and most fisheries around the world are experiencing serious ecological, social or economic problems and usually all three. Today there is global concern about the state of fishery resources and aquatic ecosystems, their resilience to future stresses such as climate change and their ability to continue to provide benefits.

Financing Infrastructure in Asia and the Pacific

This book provides a detailed introduction to how the Lander (the 16 states of Germany) function not only within the country itself but also within the wider context of European political affairs. Some knowledge of the role of the Lander is essential to an understanding of the political system as well as of German federalism. This book traces the origin of the Lander. It looks at their place in the constitutional order of the country and the political and administrative system. Their organization and administration are fully covered, as is their financing. Parties and elections in the Lander and the controversial roles of parliaments and deputies are also examined.

A Fishery Manager's Guidebook

In its comprehensive analysis of a wide range of primary and secondary sources in both Chinese and Western languages, this authoritative work stands as the definitive study of the theory, implementation

and legacy of the Chinese Communist Party's thought-remolding campaign. This decades-long campaign involved the extraction of confessions from millions of Chinese citizens suspected of heterodoxy or disobedience to party dictates, along with their subjection to various forms of "re-education" and indoctrination. Hu Ping's carefully structured overview provides a valuable insider's perspective, and supersedes the previous landmark study on this vastly interesting topic.

In over sixty articles and country reports, *The Indigenous World 2017* gives a comprehensive update on the current situation of indigenous peoples and their human rights and reports on the most important developments in international processes of relevance to indigenous peoples during 2016. The yearbook is an essential source of information and an indispensable tool for those who need to be informed about the most recent issues and developments that have impacted indigenous peoples worldwide. *The Indigenous World* is produced by the International Work Group for Indigenous Affairs (IWGIA) in collaboration with indigenous and non-indigenous scholars and activists.

The Lander and German Federalism

Over the past three decades the rural Asian economy has experienced a dramatic transformation. In most countries the speed and level of development have far exceeded expectations. This book describes this "quiet revolution" with an emphasis on policies and strategies and their impact on agricultural and economic growth, poverty, and the environment.

'This volume provides a splendid and wide-ranging collection of studies analyzing the political-economy of decentralization in Latin-America. It's a fascinating story with numerous and profound insights into how fiscal decentralization actually works in the context of a variety of fiscal institutions and in a setting with a high degree of inequality in the distribution of income and territorial disparities.' - Wallace E. Georgia's reform trajectory has been nothing short of remarkable. In less than two decades, successive structural, regulatory and economic reforms have propelled Georgia from one of the poorest post-Soviet states to an upper-middle income economy. Georgia ranks among the best performers in the world according to international indices on doing business and openness to foreign investment - achievements many countries look to for inspiration. Yet in recent years, the Georgian government has reflected on why these reforms have not facilitated more broad-based economic growth. FDI attraction has been strong relative to the size of the Georgian economy, but the positive benefits of investment

have not been fully realised. Mobilising investment in sectors that can enhance job creation, exports and productivity will be key for Georgia's recovery from the COVID-19 pandemic. This Investment Policy Review takes stock of recent achievements in improving the investment climate and assesses areas for the government to consider in strengthening its reform efforts to attract FDI that can have a positive impact on inclusive, sustainable growth.

A Europe of Towns and Cities

Africa has abundant renewable energy resources. Traditionally reliant on hydropower, the continent is turning to solar photovoltaics (PV) to bolster energy security and support rapid economic growth in a sustainable manner. With recent substantial cost reductions, solar PV offers a rapid, cost-effective way to provide utility-scale electricity for the grid and modern energy services to the approximately 600 million Africans who lack electricity access. According to this report, installed costs for power generated by utility-scale solar PV projects in Africa have decreased as much as 61 per cent since 2012 to as low as USD 1.30 per watt in Africa, compared to the global average of USD 1.80 per watt. The report shows that mini-grids utilising solar PV and off-grid solar home systems also provide higher quality energy services at the same or lower costs than the alternatives. Stand-alone solar PV mini-grids have installed costs in Africa as low as USD 1.90 per watt for systems larger than 200 kilowatt. Solar home systems provide the annual electricity needs of off-grid households for as little as USD 56 per year, less than the average price for poor quality energy services. IRENA estimates that with the right enabling policies, Africa could be home to more than 70 gigawatts of solar PV capacity by 2030. The report discusses challenges in policy making and proposes a co-ordinated effort to collect data on the installed costs of solar PV in Africa, across all market segments. Such information will improve the efficiency of policy support and accelerate deployment.

Early Democracies in the Low Countries

This edited collection explores the ways in which our understanding of the past in Dutch history and culture can be rethought to consider not only how it forms part of the present but how it can relate also to the future. Divided into three parts – The Uses of Myth and History, The Past as Illumination of Cultural Context, and Historiography in Focus – this book seeks to demonstrate the importance of the past by investigating the transmission of culture and its transformations. It reflects on the history of historiography and looks critically at the products of the historiographic process, such as Dutch and Afrikaans literary history. The chapters cover a range of disciplines and approaches: some authors offer a broad view of a particular period, such as Jonathan Israel's contribution on myth and history in the ideological politics of the Dutch Golden Age, while others zoom in on specific genres, texts or historical moments, such as Benjamin Schmidt's study of the doolhof, a word that today means 'labyrinth' but once described a 17th-century educational amusement park. This volume, enlightening and home to multiple paths of enquiry leading in different directions, is an excellent example of what a past-present doolhof might look like.

Early Democracies in the Low Countries

In the 16th century, the people of the Low Countries (modern Belgium and The Netherlands), the most urbanized and best educated in Transalpine Europe, provided a ready audience for ideas of religious reform and a sophisticated political framework for the airing of the great debates of the age. The present volume reproduces fourteen essays in which James Tracy studies different aspects of Low Countries culture.

Early Democracies in the Low Countries

This volume confronts an important historical hypothesis with empirical evidence from selected periods of history. The hypothesis in question states that competition among political and legal organisations in developing rules has been a crucial condition for liberty, innovation and growth in the history of mankind. It is due to Immanuel Kant, Edward Gibbon and Max Weber and has been revived and further developed by Nobel-Laureate Douglass C. North who contributes the first chapter. The volume brings together political economists, historians and legal scholars to discuss the role of political competition in the rise and decline of nations - both in theory and in a large number of case studies.

Early Democracies in the Low Countries

For every citizen of the world, there is no more urgent issue than the spread of democracy. Democracy is what the WTO-protestors are calling for; it's the main concern of human rights advocates; and it's only long-term way to end terrorism. But how does democracy spread? What can be done to encourage and

support. This remarkable new collection brings together some of the best minds in variety of fields to discuss the conditions that promote and sustain, or undermine and extinguish democratic institutions and ideas. Spanning political thought from ancient Athens to contemporary sub-Saharan Africa, the contributors develop an outline of how democracy develops. Several key factors emerge: Democratic transitions are always heavily shaped by the ideas and practices of past regimes (like tribal traditions in Africa), international political and economic pressure to liberalize (as in Asia) and current economic conditions. The quality of democracy is almost always improved by the elimination of religion as the center of the state, by the move from democracy as protection of the individual from the state to democracy as enhancer of rights, and by the progression from a focus on the individual to a focus on the community. Expansive in its coverage and fundamental in its significance, *The Making and Unmaking of Democracy* is a volume to learn from, argue against, and expand upon.

Early Democracies in the Low Countries

To examine the long-run origins of democracy and dictatorship, Brian Downing focuses on the importance of medieval political configurations and of military modernization in the early modern period. He maintains that in late medieval times an array of constitutional arrangements distinguished Western Europe from other parts of the world and predisposed it toward liberal democracy. He then looks at how medieval constitutionalism was affected by the "military revolution" of the early modern era--the shift from small, decentralized feudal levies to large standing armies. Downing won the American Political Science Association's Gabriel Almond Award for the dissertation on which this book was based.

Explores the deep roots of modern democracy, focusing on geography and long-term patterns of global diffusion.

Narratives of Low Countries History and Culture

The feast of Corpus Christi, one of the most solemn feasts of the Latin Church, can be traced to the Fourth Lateran Council in 1215 and its resolution of disputes over the nature of the Eucharist. The feast was first celebrated in Liège in 1246, thanks largely to the efforts of a religious woman, Juliana of Mont Cornillon, who not only popularized the feast, but also wrote key elements of an original office. This volume presents for the first time a complete set of source materials germane to the study of the feast of Corpus Christi. In addition to the multiple versions of the original Latin liturgy, a set of poems in Old French, and their English translations, the book includes complete transcriptions of the music associated with the feast. An introductory essay lays out the historical context for understanding the initiation and reception of the feast.

The Low Countries in Early Modern Times

Democracy is well-established and soundly practiced in most European countries. But despite unprecedented progress, there is growing dissatisfaction with the state of democracy and deepening mistrust of democratic institutions; a situation exacerbated by the economic crisis. Are Europe's democracies really under threat? Has the traditional model of European democracy exhausted its potential? A broad consensus is forming as to the urgent need to examine the origins of the crisis and to explore visions and strategies which could contribute to rebuilding confidence in democracy. As Europe's guardian of democracy, human rights and the rule of law, the Council of Europe is committed to exploring the state and practice of European democracy, as well as identifying new challenges and anticipating future trends. In order to facilitate this reflection, the Council of Europe held a series of Democracy Debates with the participation of renowned specialists working in a variety of backgrounds and disciplines. This publication presents the eight Democracy Debate lectures. Each presentation analyses a specific aspect of democracy today, placing the issues not only in their political context but also addressing the historical, technological and communication dimensions. The authors make proposals on ways to improve democratic governance and offer their predictions on how democracy in Europe may evolve. Together, the presentations contribute to improving our understanding of democracy today and to recognising the ways it could be protected and strengthened.

The Low Countries in the Sixteenth Century

Contrary to earlier views of preindustrial Europe as an essentially sedentary society, research over the past decades has amply demonstrated that migration was a pervasive characteristic of early modern Europe. In this volume, the theme of urban migration is explored through a series of historical contexts, journeying from sixteenth-century Antwerp, Ulm, Lille and Valenciennes, through seventeenth-century Berlin, Milan and Rome, to eighteenth-century Strasbourg, Trieste, Paris and London. Each chapter demonstrates how the presence of diverse and often temporary groups of migrants was a core feature of everyday urban life, which left important marks on the demographic, economic, social, political, and cultural characteristics of individual cities. The collection focuses on the interventions by urban authorities and institutions in a wide-ranging set of domains, as they sought to stimulate, channel and control the newcomers' movements and activities within the cities and across the cities' borders. While striving for a broad geographical and chronological coverage in a comparative perspective, the volume aims to enhance our insight into the different factors that shaped urban migration policies in different European settings west of the Elbe. By laying bare the complex interactions of actors, interests, conflicts, and negotiations involved in the regulation of migration, the case studies shed light on the interrelations between burghership, guilds, relief arrangements, and police in the incorporation of newcomers and in shaping the shifting boundaries between wanted and unwanted migrants. By relating to a common analytical framework, presented in the introductory chapter, they engage in a comparative discussion that allows for the formulation of general insights and the identification of long term transformations that transcend the time and place specificities of the case studies in question. The introduction and final chapters connect insights derived from the individual case-study chapters to present wide ranging conclusions that resonate with both historical and present-day debates on migration.

Political Competition, Innovation and Growth

The United Dutch East India Company was the first public company, preceding the formation of the English East-India Company by over 40 years. Its fame as the first public company which heralded the transition from feudalism to modern capitalism and its remarkable financial success for nearly two centuries ensure its importance in the history of capitalism. Although a publicly owned, highly complex and diversified business, and commonly agreed to be the largest and most profitable business in the 17th century, throughout its existence the Dutch East-India Company never produced public accounts of its financial affairs which would have allowed investors to judge the performance of the Company. Its financial accounting, which changed little during its lifetime, was not designed as an aid to rational investment decision-making by communicating the Company's financial performance but to be a means of promoting sound stewardship by senior management. This study examines the contributions of accounting to the remarkable success of the Dutch East-India Company and the influences on these accounting practices. From the time that the German economic historian Werner Sombart proposed that accounting techniques, most especially double-entry bookkeeping, were critical to the development of modern capitalism and the public company, historians and accounting scholars have debated the extent and importance of these contributions. The Dutch East-India Company was a capitalistic enterprise that had a public, permanent capital and its principal objective was to continually increase profit by reinvesting its returns in the business. Rather than the organisation and management of the Dutch East-India Company reflecting the perceived benefits of a particular bookkeeping method, the supremacy that it achieved and maintained in a very hazardous business at a time of recurring conflict between European states was a consequence of the practicalities of 17th century business and The Netherlands' unique, threatening natural environment which shaped its social and political institutions.

The Making and Unmaking of Democracy

The Encyclopedia of Historians and Historical Writing contains over 800 entries ranging from Lord Acton and Anna Comnena to Howard Zinn and from Herodotus to Simon Schama. Over 300 contributors from around the world have composed critical assessments of historians from the beginning of historical writing to the present day, including individuals from related disciplines like Jürgen Habermas and Clifford Geertz, whose theoretical contributions have informed historical debate. Additionally, the Encyclopedia includes some 200 essays treating the development of national, regional and topical historiographies, from the Ancient Near East to the history of sexuality. In addition to the Western tradition, it includes substantial assessments of African, Asian, and Latin American historians and debates on gender and subaltern studies.

The Deep Roots of Modern Democracy

In this comprehensive analysis of federal or covenantal forms of government, Elazar explores the roots of federalism, traces its historical development, and portrays how federalism has been employed to promote workable governmental systems for people with diverse traditions. He identifies the several elements of federalism as a basis of political association, and describes how federalism defines political justice, shapes political behavior, and directs humans toward civic synthesis of the two. Elazar scans the centralizing and decentralizing trends in contemporary federal systems and explains why federalism is resurfacing as a significant political force in the postmodern epoch. He contends that through its covenantal foundations, federalism is an idea whose importance is akin to natural law in defining justice and delineating the origins and proper constitution of political society. ISBN 0-8173-0240-9: \$28.95.

The Feast of Corpus Christi

The eleven wide-ranging essays in this volume covering the medieval and early modern periods explore how coercive power was established within, over, and by the cities of the Low Countries. They suggest a distinctive path of political development.

Democracy on the Precipice

Between 1974 and 1990 more than thirty countries in southern Europe, Latin America, East Asia, and Eastern Europe shifted from authoritarian to democratic systems of government. This global democratic revolution is probably the most important political trend in the late twentieth century. In *The Third Wave*, Samuel P. Huntington analyzes the causes and nature of these democratic transitions, evaluates the prospects for stability of the new democracies, and explores the possibility of more countries becoming democratic. The recent transitions, he argues, are the third major wave of democratization in the modern world. Each of the two previous waves was followed by a reverse wave in which some countries shifted back to authoritarian government. Using concrete examples, empirical evidence, and insightful analysis, Huntington provides neither a theory nor a history of the third wave, but an explanation of why and how it occurred. Factors responsible for the democratic trend include the legitimacy dilemmas of authoritarian regimes; economic and social development; the changed role of the Catholic Church; the impact of the United States, the European Community, and the Soviet Union; and the "snowballing" phenomenon: change in one country stimulating change in others. Five key elite groups within and outside the nondemocratic regime played roles in shaping the various ways democratization occurred. Compromise was key to all democratizations, and elections and nonviolent tactics also were central. New democracies must deal with the "torturer problem" and the "praetorian problem" and attempt to develop democratic values and processes. Disillusionment with democracy, Huntington argues, is necessary to consolidating democracy. He concludes the book with an analysis of the political, economic, and cultural factors that will decide whether or not the third wave continues. Several "Guidelines for Democratizers" offer specific, practical suggestions for initiating and carrying out reform. Huntington's emphasis on practical application makes this book a valuable tool for anyone engaged in the democratization process. At this volatile time in history, Huntington's assessment of the processes of democratization is indispensable to understanding the future of democracy in the world.

Gated Communities?

Henri Pirenne (1862-1935) was a Belgian historian of international stature. He had an intellectual reputation that extended far beyond the borders of his own country. This book is not merely a writer's oeuvre. It is a life in pictures.

Accounting by the First Public Company

Mediaevalia Lovaniensia 37 In the context of late medieval state centralization, the political autonomy of the towns of the Low Countries, Northern France, and the Swiss confederation was threatened by central governments. Within this conflict both rulers and towns employed symbolic means of communication to legitimate their power. The authors of *Symbolic Communication in Late Medieval Towns* explore how new layers of meaning were attached to well-known traditions and how these new rituals were perceived. They study the public encounters between rulers and towns, as well as among various social groups within the towns.

Encyclopedia of Historians and Historical Writing

The sixth volume of *The New Cambridge Medieval History* covers the fourteenth century, a period dominated by plague, other natural disasters and war which brought to an end three centuries of economic growth and cultural expansion in Christian Europe, but one which also saw important developments in government, religious and intellectual life, and new cultural and artistic patterns. Part I sets the scene by discussion of general themes in the theory and practice of government, religion, social and economic history, and culture. Part II deals with the individual histories of the states of western Europe; Part III with that of the Church at the time of the Avignon papacy and the Great Schism; and Part IV with eastern and northern Europe, Byzantium and the early Ottomans, giving particular attention to the social and economic relations with westerners and those of other civilisations in the Mediterranean.

Concise Encyclopaedia Of World History

This book is about the spectacles and ceremonies of society in the Low Countries. It is the first ever attempt to unite and translate some of the key texts which informed Johan Huizinga's famous study of the Burgundian court in *The Waning of the Middle Ages*, a work which has never gone out of print.

Exploring Federalism

The volume begins with a study by Douglass C. North that emphasizes the economic and social factors that encouraged the development of freedom in the West and inhibited its development in other societies, notably China. The Greeks first devised civil and political liberty, and also were the first to have a word, *eleutheria*, for the concept. Martin Ostwald traces the history of the word over the course of Greek history, seeking when and why it assumed a meaning similar to freedom. Brian Tierney demonstrates how the medieval Church, by perpetuating Roman traditions of popular election and inspiring representative government, was vital to the development of modern freedom. The earliest secular institutions to follow the example of the Church in shaping their own governments were the towns of Italy, and John Hine Mundy shows how the towns served as the initial training grounds for laymen in the practice of free government. Monarchs whose coffers were depleted by continuous warfare sought to tap the resources of the wealthy towns and better-off rural residents, but these long-independent groups were not easily bullied and gathered their representatives together to negotiate taxation and grievances. In two chapters, H. G. Koenigsberger traces this background of parliaments and estates from all over Europe from the thirteenth century through the early modern era. In seventeenth-century England, parliamentary legislation would become the major vehicle for protecting the liberties of the subject. Before that, however, the common law courts were the main arena for advancing freedom, as J. H. Baker shows in his examination of the key developments in the common law. Traditionally, the Renaissance and the Reformation have been looked upon as largely separate phenomena. William J. Bouwsma asserts that in fact they were closely linked, with profound consequences for the shaping of modern freedom. Donald R. Kelley discusses the various forms and justifications of resistance that arose against the powerful monarchies that had emerged from the chaos and confusion of the fourteenth and early fifteenth centuries.

Power and the City in the Netherlandic World

Cities, Capitalism and Civilization looks at the character and distinctiveness of Western Civilization. R.J. Holton sets out to challenge the belief that cities and urban social classes have formed the main component of the advance of civilization, and the principle dynamic of Western capitalism. This book was first published in 1986.

The Third Wave

This introductory overview of the Low Countries' history traces their development since Roman times, providing equal weighting to the Netherlands, Belgium and Luxembourg. Paul Arblaster looks at political, cultural and social history, including the rise of the merchant classes, the Renaissance and Golden Age, and the two world wars of the 20th century. The final chapter has been expanded and revised to take into account developments since 2011. This third edition is thoroughly updated and revised throughout and benefits from our recently refreshed series design. This timely and engaging narrative provides an invaluable starting-point for students of History focusing on the Low Countries, European Studies and Dutch studies. New to this Edition: - More detail on the EU, particularly current in light of Brexit and Euroscepticism - More environmental and global history - Coverage of the latest political developments - More maps, to bridge the gap between the 15th century and the present day - An updated bibliography

Chinese Business Under Socialism

This study of the French Revolution reveals that from March 1792 to April 1793, French foreign policy was dominated not by the leaders of the French revolutionary government, but by two successive French foreign ministers, Charles-Francois Dumouriez and Pierre LeBrun.

Henri Pirenne, Historian

Following the series' first book *How Maritime Trade and the Indian Subcontinent Shaped the World*, this book continues to demonstrate how maritime trade has been the key driver of the world's wealth-creation, economic and intellectual progress. The story begins where the first book ends, when following Roman Empire collapse, 7th-century European maritime trade almost ceased, creating population collapse and poverty; the Dark Ages. In 700, stuttering, hesitant recovery was evident with new ports but Viking and Muslim maritime raiding neutered recovery until the 11th century. In Asia by contrast, short and long-haul trade thrived and accelerated from east Africa and the Persian Gulf all the way to China, encouraging Southeast Asian state formation. The book tells the story of slowly rising, gradually accelerating European maritime trade, which until the 15th century was overshadowed by far more voluminous Asian trade in much larger, more complex ships traded by more sophisticated commercial entities, contributing to innovative tolerant wealth-creating maritime societies. In Europe, Mediterranean maritime trade made most progress from about 1000 to 1450. But by 1700, north Europeans dominated Atlantic, American and Mediterranean trade and were penetrating sophisticated Asian maritime networks, a complete reversal. This book explains how and why and how destructive continental influences destroyed Asia's maritime supremacy. As in the first book, Nick Collins finds similar patterns; maritime inquisitiveness, invention, problem-solving and toleration and continental political suppression of those maritime traits, most dramatically in China, but destructively everywhere, allowing the millennium maritime trade revolution.

Symbolic Communication in Late Medieval Towns

De-industrialization processes have accompanied industrialization from the start, both regionally and globally. Most historical studies of de-industrialization focus on economic issues, including structural causes and forms of unemployment. Much less attention is usually paid to the social and cultural aspects. What are the consequences of de-industrialization for working-class families and their communities? How does de-industrialization affect working-class culture, trade unions traditional labour parties, and the regional social, educational and cultural infrastructure? Are gender relations changed by de-industrialization? The essays here propose a wide scope for the study of industrial devolution.

The New Cambridge Medieval History: Volume 6, C.1300-c.1415

This book unites and translates some of the key texts which informed Johan Huizinga's famous study of the Burgundian court in 'The Waning of the Middle Ages', a work which is taught in many history courses throughout Europe and the USA.

Court and civic society in the Burgundian Low Countries c.1420–1530

Why do people go to war? Is it rooted in human nature or is it a late cultural invention? How does war relate to the other fundamental developments in the history of human civilization? And what of war today - is it a declining phenomenon or simply changing its shape? In this truly global study of war and civilization, Azar Gat sets out to find definitive answers to these questions in an attempt to unravel the 'riddle of war' throughout human history, from the early hunter-gatherers right through to the unconventional terrorism of the twenty-first century. In the process, the book generates an astonishing wealth of original and fascinating insights on all major aspects of humankind's remarkable journey through the ages, engaging a wide range of disciplines, from anthropology and evolutionary psychology to sociology and political science. Written with remarkable verve and clarity and wholly free from jargon, it will be of interest to anyone who has ever pondered the puzzle of war.

The Origins of Modern Freedom in the West

This book provides the first comprehensive overview of Africa's history of democracy, grappling with important questions facing Africa today.

Cities, Capitalism and Civilization

This book explores a new way of thinking about diplomacy, warfare, trade, and collective goods that begins with the notion that key international actors project their domestic institutions onto the regional or global arena. Exploring the emergence, consolidation, and decay of international norms, the author puts forward a general argument designed to identify patterns across time and space, combining key insights from constructivist, liberal, classical realist, English School, and feminist thinking. By moving from institution to institution, each chapter presents a coherent story ranging from antiquity to the contemporary world allowing us to see not only the patterns, but also to begin to develop conjectures about other causal stories implicit in the narrative. The book will be used by scholars and students of international relations, international organization and law, security studies, political economy, historical sociology, regionalism, and a wide range of specific topics such as arms control, trade, migration, identity, and collective goods.

A History of the Low Countries

In *Communes and Conflict*, Jan Dumolyn and Jelle Haemers explore the urban rebellions that regularly erupted in Flanders between the thirteenth and sixteenth centuries. They analyse not only how these rebellions were sparked and repressed, but also how they shaped the culture and identity of Flemish townspeople. Drawing from a wide range of theoretical methods and concepts, including those of discourse analysis, semiotics, speech acts, collective memory and material cultural studies, the authors return to key Marxist questions on ideology, labour and class interest to map the perspectives of the rebels, the urban patriciate and the Flemish and Burgundian nobility.

Foreign Policy and the French Revolution

Public religious practice lay at the heart of civic society in late medieval Europe. In this illuminating study, Andrew Brown draws on the rich and previously little-researched archives of Bruges, one of medieval Europe's wealthiest and most important towns, to explore the role of religion and ceremony in urban society. The author situates the religious practices of citizens - their investment in the liturgy, commemorative services, guilds and charity - within the contexts of Bruges' highly diversified society and of the changes and crises the town experienced. Focusing on the religious processions and festivities sponsored by the municipal government, the author challenges much current thinking on, for example, the nature of 'civic religion'. Re-evaluating the ceremonial links between Bruges and its rulers, he questions whether rulers could dominate the urban landscape by religious or ceremonial means, and offers new insight into the interplay between ritual and power of relevance throughout medieval Europe.
