Q. What will you bring to the role of Finance Manager?

Secondly, I will bring an ability to manage, lead and inspire everyone within the finance team to carry out their duties in the best interests of your company with the main focus on helping you to grow and thrive within your industry. Thirdly, I will bring great attention to detail and an insistence that everything financial must be completed to a very high standard

Q. What is your understanding of the Finance Manager role and are you ready for the challenge?

Q. When making a decision that has a wide impact across different parts of our organization, what factors would you consider?

There would be times where the decisions I would make as a Finance Manager would just need to be implemented, especially in respect of financial conduct or regulation. However, prior to making important organizational-wide decisions, I would conduct a consultation process, especially with senior managers to decide how the decision or change would impact on them and their plans. My priority would always be the financial health of the organization, and I would need to discuss important decisions with key individuals first before implementing them

### Basic Construction Materials

This construction client's manual is written in the form of a list of activities. It supports owners in the role of client by helping them make choices during the project development process. This increases control over cost, quality and duration at each stage. Activities within each main stage of the project development (preparation stage; procurement; design; preparation for construction; construction itself; handover; implementation) are divided into phases, each requiring separate decision-making. The phase begins with a list of direct previous decisions and continues with a list of executors, the goal of the present phase and a list of activities to be performed. And each phase ends with a list of expected results and a list of activities that these results release for action in the next phase. The sequence of these seven stages can be altered to help building owners manage risk by choosing and combining the timing of these stages. The tasks involved in project preparation, described in the first chapter are for example, often left by the owner for the designers to solve - or sometimes even the contractors. The decisions relating to the choice of procurement schemes, described in the second chapter, can be made either at the preparation stage of project development, as part of the prioritisation of aims, or at the time of choosing the designer, or at the stage of choosing construction contractors. Manual of Construction Project Management – for owners & clients is for prospective owners who either operate as clients themselves, or who use the services of professional construction management companies. The aim is to help both owners and their construction partners understand what to expect from each other. The manual describes activities at the level of detail required to choose the management task or method to make the decision. It is not bound to regulations of any specific country and a detailed glossary makes it an indispensable worldwide reference.

### Managing Construction Equipment

While most construction management books are project based, this book looks at management principles and techniques applied to the day-to-day problems facing a business in the construction industry. It covers: Business strategy Industrial relations Health and safety Managing people Financial management Quantitative methods The text includes end of chapter review questions and a range of illustrative examples. Since the book was first written in 1982 much has changed. The Second Edition has been thoroughly revised and takes account of the increased globalisation of construction, the move from public to private sector work, the drive for productivity, changing procurement methods, new emphasis on life cycle costing and much more. It will provide a valuable text for undergraduate and postgraduate courses in construction management, surveying and civil engineering as well as offering useful insights for practitioners undertaking CPD activities.

#### Project Management in Construction, Sixth Edition

This book captures best practice in construction stakeholder management using a range of international case studies. It demonstrates stakeholder mapping, presents the power/interest matrix and analyses a model for the timely engagement of stakeholders. The increased use of partnering and other relational forms of contracting have underlined the need for project participants to work together and also to be aware of all those who can affect or be affected by a project and its associated developments. Stakeholder management enables them to see this wider picture and provides guidance for managing the diverse views and interests that can manifest in the course of a project's life. All construction projects have the potential for conflicts of interest that can result in costly and damaging legal proceedings. This new book advocates an alternative to dispute resolution that is proactive, practical and global in its application. *Construction Stakeholder Management* is therefore an essential text for advanced students, lecturers, researchers and practitioners in the built environment.
