Agriculture and Economic Development

Composite work on the relationship of rural development to economic growth, with particular reference to developing countries - covers economic implications of agrarian reform, land tenure, traditional social structures, human resources development, marketing, trade, price policy, taxation, agricultural policy, etc. Map, references and bibliographies.

Agricultural Development and Economic Growth

This book answers the questions: What is happening to American agriculture, and why? Steven C. Blank uses portfolio theory to analyze both macro- and microeconomic data that paints a clear picture of the trends in agriculture, and explains why these trends are consistent with market evolution and global economic development. He clarifies agriculture's specific role in economic development with a focus on the current and future globalizing commodity markets. The book features empirical research that demonstrates the link between farm-level investment decisions and regional and national economic trends. It shows how the dynamic environment of industrialization and globalization of agriculture is part of a continuing development that is driven by technological innovation. This all points to a future with a very different agricultural production sector and some extremely important policy choices that will face the entire country.

Agricultural Economics & Agriculture in Economic Development

Introduction; Problems and theory; Agriculture in economic development theories; Theories of agricultural development; Toward a theory of technical and institutional change; International comparisons; International comparisons of agricultural productivity; Sources of agricultural productivity differences

among countries; Agricultural growth in the United States and Japan; Resource constraints and technical change; Science and progress in agriculture; Can growth be transferred?; International transfer of agricultural technology; Technology transfer and land infrastructure; Retrospect and prospect; Growth and equity in agricultural development; Disequilibrium in world agriculture; Agricultural transformation and economic growth; Appendixes.

Agricultural Economics, Agriculture in Economic Development & Health Economics

This book showcases the power of economic principles to explain and predict issues and current events in the food, agricultural, agribusiness, international trade, natural resources and other sectors. The result is an agricultural economics textbook that provides students and instructors with a clear, up-to-date, and straightforward approach to learning how a market-based economy functions, and how to use simple economic principles for improved decision making. While the primary focus of the book is on microeconomic aspects, agricultural economics has expanded over recent decades to include issues of macroeconomics, international trade, agribusiness, environmental economics, natural resources, and international development. Hence, these topics are also provided with significant coverage.

Agricultural Economics Research

This book examines the role of agriculture in the economic transformation of developing low- and middle-income countries and explores means for accelerating agricultural growth and poverty reduction. In this volume, Mellor measures by household class the employment impact of alternative agricultural growth rates and land tenure systems, and impact on cereal consumption and food security. The book provides detailed analysis of each element of agricultural modernization, emphasizing the central role of government in accelerated growth in private sector dominated agriculture. The book differs from the bulk of current conventional wisdom in its placement of the non-poor small commercial farmer at the center of growth, and explains how growth translates into poverty reduction. This new book is a follow up to Mellor's classic, prize-winning text, *The Economics of Agricultural Development*. Listed as a Best Books of 2017: Economics by Financial Times.

The Economics of American Agriculture: Evolution and Global Development

Volume 3 of this series of the Handbooks in Economics follows on from the previous two volumes by focusing on the fundamental concepts of agricultural economics. The first part of the volume examines the developments in human resources and technology mastery. The second part follows on by considering the processes and impact of invention and innovation in this field. The effects of market forces are examined in the third part, and the volume concludes by analysing the economics of our changing natural resources, including the past effects of climate change. Overall this volume forms a comprehensive and accessible survey of the field of agricultural economics and is recommended reading for anyone with an interest, either academic or professional, in this area. *Part of the renowned Handbooks in Economics series *Contributors are leaders of their areas *International in scope and comprehensive in coverage

Agricultural Development

The role of agriculture in economic development. The nature of traditional agriculture. The modernization of agriculture.

Subsistence Agriculture and Economic Development

Agriculture as a sector; Factor growth and allocation; Technology; Static and dynamic behavior.

Proceedings of the Eleventh International Conference of Agricultural Economists, Held at the Hotel Casino de La Selva, Cuernavaca, Morelos, Mexico, 19 August-30 August 1961

Other topics include market failures, food insecurity, rural poverty, environmental degradation, income and asset inequality, fiscally sustainable organizations, the changing roles of the public and private sector in research, input delivery systems, marketing and low rates of agricultural growth in much of sub-Saharan Africa.

Principles of Agricultural Economics

The first of an eight-volume series, *The Literature of the Agricultural Sciences*, this book analyzes the trends in the published literature of agricultural economics and rural sociology during the past fifty years. It uses citation analysis and other bibliometric techniques to identify the primary journals, report series, and monographs of current importance to the developed industrial countries as well as those in the Third World.

Agricultural Development in the Third World

One of the more perplexing problems of economic development is helping subsistence farmers break away from production simply for home consumption to become commercial farmers, producing more and more for sale in the marketplace. Although subsistence farms occupy 40 percent of the world's cultivated land and support half of mankind, facts about them and programs to increase their output are scattered. *Subsistence Agriculture and Economic Development* provides a unique overview of these difficulties and their significance to economic development. It is the first book to subject subsistence agriculture to rigorous multi-disciplinary examination and to bring to light new theory and empirical evidence directed toward solving the problem. This volume contains original chapters by forty leading social scientists and agricultural specialists who summarize contemporary theory, fact, and policy on the problems of developing agriculture from subsistence to a commercial basis. Each contributor speaks from one or more of the relevant standpoints of economics, sociology, agronomy, political science, anthropology, and social psychology. There emerges a clear, meaningful picture of the subsistence farmer and the problems involved in changing his attitudes, methods of production, and economic and social environment. Broad in scope, documented with pertinent case studies, and far-reaching in its guidelines for future research and policy, this work should be read by all concerned with increasing food production and with economic development. This is an area of special concern in the uses of food products as the basis for new energy resources - an issue of increasing importance in the advancing use of ethanol as a fuel drawn from corn products.

Introduction to Economics of Agricultural Development

A dozen papers from an August 1989 international conference near Zurich explore the role of governments in improving the agriculture of developing countries, and how that affects overall industrial development. Annotation copyrighted by Book News, Inc., Portland, OR

Agricultural Development and Economic Transformation

First published in 1987, *Agricultural Extension Worldwide* presents an international perspective on agricultural extension and highlights extension as an integral function of agricultural development. Agricultural extension is one of the largest nonformal problem-solving educational systems in the world. It is generally concerned with transferring knowledge and research to farmers but may include services to other target audiences such as farm families and rural youth, as well as serve for developing rural community resources. In sixteen chapters, various major systems of extension are discussed along with factors that make for their success or failure, including the linkages required and the policy and financial supports necessary to make them effective. This book is a must read for scholars and researchers of agricultural economics, agricultural policy and agriculture in general.

Handbook of Agricultural Economics

"Biography of William J. Spillman, scientist and educator for the United States Department of Agriculture. Explores Spillman's role in the development of the agricultural economics, the agricultural New Deal, genetics research, agricultural education and the Cooperative Extension Service, the post-World War I overproduction crisis, and the Law of Diminishing Returns"--Provided by publisher.

The Economics of Agricultural Development

Principles of Agricultural Economics continues to showcase the power of economic principles to explain and predict issues and current events in the food, agricultural, and agribusiness sectors with a succinct and reader-friendly format.

Agriculture and Economic Growth

Composite work on the relationship of rural development to economic growth, with particular reference to developing countries - covers economic implications of agrarian reform, land tenure, traditional social structures, human resources development, marketing, trade, price policy, taxation, agricultural policy, etc. Map, references and bibliographys.

International Agricultural Development

Agrarian Change and Economic Development is a landmark volume that examines the historical experience of the relationship between agrarian change and economic development. Because agriculture was until recently man's dominant occupation, scholars have traditionally drawn little attention to its immense historical importance. The essays in this book redress this balance, and illustrate the significance of the western world's escape from an overwhelmingly agrarian condition. It is therefore an ideal work for encouraging those concerned with current problems to perceive agricultural development as professional historians see it, and to question the oversimplified historical analogies commonly employed in development economics. Presenting historical examples of change within particular agricultural systems, and discussing their implications for national economic development, both social scientists and planners less concerned with historical revision will have equal reason to welcome these case studies of the long-run interaction of agrarian change and economic activity. This classic book was first published in 1969.

Agricultural Economics and Rural Sociology

The world's 58 poorest countries are diverse in many respects, but they share the characteristic of a labor force overwhelmingly dependent on agriculture. Challenging the assumption that mass poverty and chronic hunger are insoluble problems, this book systematically explores the multiple aspects of economic development in these countries, which are home to 60 percent of the world's population. The authors offer a broad-based development strategy to raise incomes through agricultural productivity growth and expanded rural employment. They present rich new information on the rural informal sector and on agriculture-industry interactions, and they analyze the impact of macroeconomic and social policies on the rural economy. Policy instruments aimed at bringing about broad-based development are carefully assessed from fiscal policy to development of new seeds and farm implements. The book includes detailed case studies of countries that have seized—or missed—development opportunities. Comparison of the successful economic transformations of Japan and the United States shows how key ideas, which the authors call strategic notions, have enabled policymakers to act with foresight. Analyses of strategic choices in China, the Soviet Union, Taiwan, Mexico, Kenya, and Tanzania also show how development strategies that emerge from the real-world political economy reflect a mix of individual interests and strategic notions.

Subsistence Agriculture and Economic Development

In this chapter we compute measures of total factor productivity (TFP) growth for developing countries and then contrast TFP growth with technological capital indexes. In developing these indexes, we incorporate schooling capital to yield two new indexes: Invention-Innovation Capital and Technology Mastery. We find that TFP performance is strongly related to technological capital and that technological capital is required for TFP and cost reduction growth. Investments in technological capital require long-term (20- to 40-year) investments, which are typically made by governments and aid agencies and are the only viable escape route from mass poverty.

Agriculture and the State

What are the food and agricultural development problems facing Third World nations? Does current economic theory help accelerate growth? Does it foster useful development policies? This book addresses these and other questions to provide a wide-ranging and thorough introduction to the theories, policies, and practices aimed at increasing food production and agricultural development. Individual sections examine recent agricultural progress in developing nations, including increased production and growing demand; the economic and social theory of agricultural development; and sources of accelerated growth through biochemical and mechanical technologies and improved agricultural institutions. Rural financial markets, cooperatives, and land reform are also examined. Later chapters focus on agricultural research and extension, agricultural marketing, trade, price policies, and planning. A concluding chapter looks at new strategies for accelerating agricultural development. Past decades have seen an explosion of empirical research on Third World agriculture. This up-to-date,

comprehensive overview will interest not only students of agricultural development in the Third World but also professional in government and international organizations.

Economic Growth and Agriculture

Economics of Agricultural Development examines the causes, severity, and effects of persistent poverty, rapid population growth and malnutrition in developing countries. It discusses potential solutions to these problems, and considers the implications of globalization for agriculture, poverty, and the environment.

Agricultural Extension Worldwide

This book explores the policy implications of growing pressures for economic adjustment in the agricultural sectors of developed countries. It starts by describing the recent history of adjustment in the food and agricultural sector and assesses the current and future pressures for adjustments and their implications. Chapters provide empirical evidence on the magnitude of future adjustment in the agricultural sector under a continuation of existing policies and analyze the factors that affect farmers' ability to adjust to economic change. The book concludes by identifying lessons to be learned from recent reforms and evaluating future policy options.

William J. Spillman and the Birth of Agricultural Economics

The globalization of goods, services and capital for agriculture is fundamental to the future of developing countries and has major implications for the fight against poverty and sustainability of the environment. In recent years, agriculture has once again returned to a position of centre stage as food price volatility has led countries to re-examine their development strategies. This new edition of the essential textbook in the field builds on the 2006 original and reflects the following developments: the increased impact of climate change issues affecting agricultural markets such as bio-fuels, the rise in farm prices and energy costs the move to higher valued agricultural products The book contains a wealth of real world case studies and is now accompanied by a website that includes powerpoint lectures, a photo bank and a large set of discussion and exam questions. The accompanying website is available to view at <http://ecagdev.agecon.vt.edu/>

Agriculture, Economics, and Growth

Written in an accessible manner for development economists and agricultural policy analysts, this book is designed to help researchers.
