Modern Text Book of Zoology

Excerpt from Illustrations of Zoology: Invertebrates and Vertebrates This book is a companion to a course of Systematic Zoology. The need of such a book has become obvious to us from some years of teaching. The study of class-types, now a part of every systematic course, is already well provided for by Professor Rolleston's Forms of Animal Life, and the many books that have modelled themselves upon it. The Zoological Laboratory, too, is not without its many and admirable text-books. There is room, however, and need for a form of book such as we offer to the public in these Illustrations of Zoology. In it the student will find illustrated, by Diagram or Drawing, the structure of forms selected from all

the great Classes of Vertebrates and Invertebrates, and the illustrations arranged in systematic order. Our design is to help the student of Comparative Anatomy in the most important and the most difficult part of a systematic Course of Lectures. In dealing with the Vertebrates, we could have wished to illustrate types of all the Orders as well as of the Classes, but to have done this would have made the book larger and more expensive without making it proportionally more useful. Besides, the general text-books, as a rule, give with a fair degree of fulness the chief features of the Vertebrate Orders. A Text-book of Zoology: Vertebrates

This book has been considered by academicians and scholars of great significance and value to literature. This forms a part of the knowledge base for future generations. So that the book is never forgotten we have represented this book in a print format as the same form as it was originally first published. Hence any marks or annotations seen are left intentionally to preserve its true nature.

Textbook of Zoology

The book provides discussion on all aspects of Invertebrates as covered in Practical Zoology. Beginning with general techniques of preparation of cultures of Protozoa, microscopic slides and laboratory regents, it also covers in tabular and detailed form, recent classification of various invertebrate phyla with examples of each order or suborder. Wide coverage of each phylum, and diagrams of major and minor dissections make the book equally useful for both undergraduate and postgraduate students.

Modern Textbook of Zoology Vertebrates

Excerpt from Text Book of Vertebrate Zoology Within recent years the laboratory method has become the basis of instruction in every science. The student is expected to find out a certain number of fundamental facts directly from nature, but while this has in itself great value as a training in observation, the fullest benefit of the study is not obtained unless there be a comprehension of the bearings of the facts observed. Observation and uncorrelated facts do not make a science. Attention can be directed to the relations and significance of the facts ascertained in the laboratory by means of lectures, but a somewhat extended experience has shown that the average student needs something more than his lecture notes, at least when beginning any subject. The present volume is intended to supplement both lectures and laboratory work, and to place in concise form the more important facts and generalizations concerning the vertebrates. It is also hoped that it may have some value for students of medicine in explaining many peculiarities of the structure of man which seem meaningless unless viewed in the light of comparative morphology. When once their meaning is comprehended it is easy to remember them. The first part of the volume is devoted to an outline of the morphology of vertebrates based upon embryology. This treatment has been adopted, since the author believes that in this way the

bearings of the facts can be most clearly shown and most easily remembered. The remainder of the volume presents an outline of the classification of vertebrates, a subject which, in recent years, has been too much ignored in college work. Here the fossils are included as well as the recent forms, since the existing fauna must be studied in the light of the past. Numerous generic names have been mentioned without characterization; they have been inserted in order that the student may be able to ascertain the relationships of the forms he may find mentioned in collateral reading.
