truth-about-perfect-self

perfect-is-a-myth-embrace-yourself

finding-perfection-within-imperfection

self-acceptance, body positivity, personal growth, embracing imperfections, perfect is a myth

The idea of perfection often leads to unrealistic expectations and self-criticism. Instead of striving for an unattainable ideal, focus on accepting yourself, flaws and all. True perfection lies in embracing your authentic self and recognizing the beauty in your unique journey and imperfections. Prioritize personal growth, self-love, and celebrate your strengths while acknowledging your weaknesses.

[Secret Of Letting Go The](#)

Computer Science – CACIC 2020

This book constitutes revised selected papers from the 26th Argentine Congress on Computer Science, CACIC 2020, held in San Justo, Buenos Aires, Argentina in October 2020. Due to the COVID-19 pandemic the conference was held in a virtual mode. The 21 full papers and 3 short papers presented in this volume were carefully reviewed and selected from a total of 118 submissions. They were organized in topical sections named: intelligent agents and systems; distributed and parallel processing; computer technology applied to education; graphic computation, images and visualization; software engineering; databases and data mining; hardware architectures, networks, and operating systems; innovation in software systems; signal processing and real-time systems; innovation in computer science education; computer security; and digital governance and smart cities.

Intelligent Computing and Optimization

Third edition of International Conference on Intelligent Computing and Optimization and as a premium fruit, this book, pursue to gather research leaders, experts and scientists on Intelligent Computing and Optimization to share knowledge, experience and current research achievements. Conference and book provide a unique opportunity for the global community to interact and share novel research results, explorations and innovations among colleagues and friends. This book is published by SPRINGER, Advances in Intelligent Systems and Computing. Ca. 100 authors submitted full papers to ICO'2020. That global representation demonstrates the growing interest of the research community here. The book covers innovative and creative research on sustainability, smart cities, meta-heuristics optimization, cyber-security, block chain, big data analytics, IoTs, renewable energy, artificial intelligence, Industry 4.0, modeling and simulation. We editors thank all authors and reviewers for their important service. Best high-quality papers have been selected by the International PC for our premium series with SPRINGER.

Proceedings of the 22nd Engineering Applications of Neural Networks Conference

This book contains the proceedings of the 22nd EANN “Engineering Applications of Neural Networks” 2021 that comprise of research papers on both theoretical foundations and cutting-edge applications of artificial intelligence. Based on the discussed research areas, emphasis is given in advances of machine learning (ML) focusing on the following algorithms-approaches: Augmented ML, autoencoders, adversarial neural networks, blockchain-adaptive methods, convolutional neural networks, deep learning, ensemble methods, learning-federated learning, neural networks, recurrent – long short-term memory. The application domains are related to: Anomaly detection, bio-medical AI, cyber-security, data fusion, e-learning, emotion recognition, environment, hyperspectral imaging, fraud detection, image analysis, inverse kinematics, machine vision, natural language, recommendation systems, robotics, sentiment analysis, simulation, stock market prediction.

Python Image Processing Cookbook

Explore Keras, scikit-image, open source computer vision (OpenCV), Matplotlib, and a wide range of other Python tools and frameworks to solve real-world image processing problems Key Features- Discover solutions to complex image processing tasks using Python tools such as scikit-image and

KerasLearn popular concepts such as machine learning, deep learning, and neural networks for image processingExplore common and not-so-common challenges faced in image processingBook Description With the advancements in wireless devices and mobile technology, there's increasing demand for people with digital image processing skills in order to extract useful information from the ever-growing volume of images. This book provides comprehensive coverage of the relevant tools and algorithms, and guides you through analysis and visualization for image processing. With the help of over 60 cutting-edge recipes, you'll address common challenges in image processing and learn how to perform complex tasks such as object detection, image segmentation, and image reconstruction using large hybrid datasets. Dedicated sections will also take you through implementing various image enhancement and image restoration techniques, such as cartooning, gradient blending, and sparse dictionary learning. As you advance, you'll get to grips with face morphing and image segmentation techniques. With an emphasis on practical solutions, this book will help you apply deep learning techniques such as transfer learning and fine-tuning to solve real-world problems. By the end of this book, you'll be proficient in utilizing the capabilities of the Python ecosystem to implement various image processing techniques effectively. What you will learnImplement supervised and unsupervised machine learning algorithms for image processingUse deep neural network models for advanced image processing tasksPerform image classification, object detection, and face recognitionApply image segmentation and registration techniques on medical images to assist doctorsUse classical image processing and deep learning methods for image restorationImplement text detection in images using Tesseract, the optical character recognition (OCR) engineUnderstand image enhancement techniques such as gradient blendingWho this book is for This book is for image processing engineers, computer vision engineers, software developers, machine learning engineers, or anyone who wants to become well-versed with image processing techniques and methods using a recipe-based approach. Although no image processing knowledge is expected, prior Python coding experience is necessary to understand key concepts covered in the book.

OpenCV 4 with Python Blueprints, Second Edition

Get to grips with traditional computer vision algorithms and deep learning approaches, and build real-world applications with OpenCV and other machine learning frameworks Key Features Understand how to capture high-quality image data, detect and track objects, and process the actions of animals or humans Implement your learning in different areas of computer vision Explore advanced concepts in OpenCV such as machine learning, artificial neural network, and augmented reality Book Description OpenCV is a native cross-platform C++ library for computer vision, machine learning, and image processing. It is increasingly being adopted in Python for development. This book will get you hands-on with a wide range of intermediate to advanced projects using the latest version of the framework and language, OpenCV 4 and Python 3.8, instead of only covering the core concepts of OpenCV in theoretical lessons. This updated second edition will guide you through working on independent hands-on projects that focus on essential OpenCV concepts such as image processing, object detection, image manipulation, object tracking, and 3D scene reconstruction, in addition to statistical learning and neural networks. You'll begin with concepts such as image filters, Kinect depth sensor, and feature matching. As you advance, you'll not only get hands-on with reconstructing and visualizing a scene in 3D but also learn to track visually salient objects. The book will help you further build on your skills by demonstrating how to recognize traffic signs and emotions on faces. Later, you'll understand how to align images, and detect and track objects using neural networks. By the end of this OpenCV Python book, you'll have gained hands-on experience and become proficient at developing advanced computer vision apps according to specific business needs. What you will learn Generate real-time visual effects using filters and image manipulation techniques such as dodging and burning Recognize hand gestures in real-time and perform hand-shape analysis based on the output of a Microsoft Kinect sensor Learn feature extraction and feature matching to track arbitrary objects of interest Reconstruct a 3D real-world scene using 2D camera motion and camera reprojection techniques Detect faces using a cascade classifier and identify emotions in human faces using multilayer perceptrons Classify, localize, and detect objects with deep neural networks Who this book is for This book is for intermediate-level OpenCV users who are looking to enhance their skills by developing advanced applications. Familiarity with OpenCV concepts and Python libraries, and basic knowledge of the Python programming language are assumed.

Pattern Recognition and Image Analysis

This book constitutes the refereed proceedings of the 10th Iberian Conference on Pattern Recognition and Image Analysis, IbPRIA 2022, held in Aveiro, Portugal, in May 2022. The 54 papers accepted for these proceedings were carefully reviewed and selected from 72 submissions. They deal with document analysis; medical image processing; biometrics; pattern recognition and machine learning; computer vision; and other applications.

OpenCV Computer Vision with Python

Learn to capture videos, manipulate images, and track objects with Python using the OpenCV Library Overview Set up OpenCV, its Python bindings, and optional Kinect drivers on Windows, Mac or Ubuntu Create an application that tracks and manipulates faces Identify face regions using normal color images and depth images In Detail Computer Vision can reach consumers in various contexts via webcams, camera phones and gaming sensors like Kinect. OpenCV's Python bindings can help developers meet these consumer demands for applications that capture images, change their appearance and extract information from them, in a high-level language and in a standardized data format that is interoperable with scientific libraries such as NumPy and SciPy. "OpenCV Computer Vision with Python" is a practical, hands-on guide that covers the fundamental tasks of computer vision-capturing, filtering and analyzing images-with step-by-step instructions for writing both an application and reusable library classes. "OpenCV Computer Vision with Python" shows you how to use the Python bindings for OpenCV. By following clear and concise examples you will develop a computer vision application that tracks faces in live video and applies special effects to them. If you have always wanted to learn which version of these bindings to use, how to integrate with cross-platform Kinect drivers and how to efficiently process image data with NumPy and SciPy then this book is for you. What you will learn from this book Install OpenCV and related software such as Python, NumPy, SciPy, OpenNI, and SensorKinect-all on Windows, Mac or Ubuntu Capture, display, and save photos and real-time videos Handle window events and input events using OpenCV's HighGui module or Pygame Understand OpenCV's image format and how to perform efficient operations on OpenCV images with NumPy and SciPy Apply "curves" and other color transformations to simulate the look of old photos, movies or video games Apply an effect only to edges in an image Copy and resize segments of an image Apply an effect only to certain depths in an image by using data from a depth sensor such as Kinect Track faces, eyes, noses and mouths by using prebuilt datasets Track arbitrary objects by creating original datasets Approach A practical, project-based tutorial for Python developers and hobbyists who want to get started with computer vision with OpenCV and Python. Who this book is written for OpenCV Computer Vision with Python is written for Python developers who are new to computer vision and want a practical guide to teach them the essentials. Some understanding of image data (for example, pixels and color channels) would be beneficial. At a minimum you will need access to at least one webcam. Certain exercises require additional hardware like a second webcam, a Microsoft Kinect or an OpenNI-compliant depth sensor such as the Asus Xtion PRO.

Machine Intelligence and Data Science Applications

This book is a compilation of peer reviewed papers presented at International Conference on Machine Intelligence and Data Science Applications (MIDAS 2021), held in Comilla University, Cumilla, Bangladesh during 26 – 27 December 2021. The book covers applications in various fields like image processing, natural language processing, computer vision, sentiment analysis, speech and gesture analysis, etc. It also includes interdisciplinary applications like legal, healthcare, smart society, cyber physical system and smart agriculture, etc. The book is a good reference for computer science engineers, lecturers/researchers in machine intelligence discipline and engineering graduates.

Mastering OpenCV with Practical Computer Vision Projects

Each chapter in the book is an individual project and each project is constructed with step-by-step instructions, clearly explained code, and includes the necessary screenshots. You should have basic OpenCV and C/C++ programming experience before reading this book, as it is aimed at Computer Science graduates, researchers, and computer vision experts widening their expertise.

Handbook of Research on Computer Vision and Image Processing in the Deep Learning Era

In recent decades, there has been an increasing interest in using machine learning and, in the last few years, deep learning methods combined with other vision and image processing techniques to create systems that solve vision problems in different fields. There is a need for academicians, developers,

and industry-related researchers to present, share, and explore traditional and new areas of computer vision, machine learning, deep learning, and their combinations to solve problems. The Handbook of Research on Computer Vision and Image Processing in the Deep Learning Era is designed to serve researchers and developers by sharing original, innovative, and state-of-the-art algorithms and architectures for applications in the areas of computer vision, image processing, biometrics, virtual and augmented reality, and more. It integrates the knowledge of the growing international community of researchers working on the application of machine learning and deep learning methods in vision and robotics. Covering topics such as brain tumor detection, heart disease prediction, and medical image detection, this premier reference source is an exceptional resource for medical professionals, faculty and students of higher education, business leaders and managers, librarians, government officials, researchers, and academicians.

PERITOS EM PAPILOSCOPIA E IDENTIFICAÇÃO HUMANA

"A Federação Nacional dos Peritos Oficiais em Identificação (Fenappi), por meio do seu livro "Peritos em papiloscopia e identificação humana" oferece contribuição importante para os estudos sobre o que podemos chamar de "a cena do crime" e, de forma ampla, soam como demonstrações sobre os novos campos dos saberes que podem, como se diz na linguagem popular, "repaginar" o campo dos profissionais em identificação. Desde que iniciou a sua série, os vários números têm permitido que um contingente expressivo de autores e autoras do campo da segurança pública possa dispor de um espaço precioso para contribuições para a melhoria da investigação da cena do crime." Prof. Dijaci David de Oliveira Doutor em Sociologia pela Universidade de Brasília (UnB)

OpenCV By Example

Enhance your understanding of Computer Vision and image processing by developing real-world projects in OpenCV 3 About This Book Get to grips with the basics of Computer Vision and image processing This is a step-by-step guide to developing several real-world Computer Vision projects using OpenCV 3 This book takes a special focus on working with Tesseract OCR, a free, open-source library to recognize text in images Who This Book Is For If you are a software developer with a basic understanding of Computer Vision and image processing and want to develop interesting Computer Vision applications with Open CV, this is the book for you. Knowledge of C++ is required. What You Will Learn Install OpenCV 3 on your operating system Create the required CMake scripts to compile the C++ application and manage its dependencies Get to grips with the Computer Vision workflows and understand the basic image matrix format and filters Understand the segmentation and feature extraction techniques Remove backgrounds from a static scene to identify moving objects for video surveillance Track different objects in a live video using various techniques Use the new OpenCV functions for text detection and recognition with Tesseract In Detail Open CV is a cross-platform, free-for-use library that is primarily used for real-time Computer Vision and image processing. It is considered to be one of the best open source libraries that helps developers focus on constructing complete projects on image processing, motion detection, and image segmentation. Whether you are completely new to the concept of Computer Vision or have a basic understanding of it, this book will be your guide to understanding the basic OpenCV concepts and algorithms through amazing real-world examples and projects. Starting from the installation of OpenCV on your system and understanding the basics of image processing, we swiftly move on to creating optical flow video analysis or text recognition in complex scenes, and will take you through the commonly used Computer Vision techniques to build your own Open CV projects from scratch. By the end of this book, you will be familiar with the basics of Open CV such as matrix operations, filters, and histograms, as well as more advanced concepts such as segmentation, machine learning, complex video analysis, and text recognition. Style and approach This book is a practical guide with lots of tips, and is closely focused on developing Computer vision applications with OpenCV. Beginning with the fundamentals, the complexity increases with each chapter. Sample applications are developed throughout the book that you can execute and use in your own projects.

Product Lifecycle Management Enabling Smart X

This book constitutes the refereed post-conference proceedings of the 17th IFIP WG 5.1 International Conference on Product Lifecycle Management, PLM 2020, held in Rapperswil, Switzerland, in July 2020. The conference was held virtually due to the COVID-19 crisis. The 60 revised full papers presented together with 2 technical industrial papers were carefully reviewed and selected from 80

submissions. The papers are organized in the following topical sections: smart factory; digital twins; Internet of Things (IoT, IIoT); analytics in the order fulfillment process; ontologies for interoperability; tools to support early design phases; new product development; business models; circular economy; maturity implementation and adoption; model based systems engineering; artificial intelligence in CAX, MBE, and PLM; building information modelling; and industrial technical contributions.

Computer Vision with SAS

Computer vision is a field of artificial intelligence that trains computers to interpret and understand the visual world. In recent years, computer vision has begun to rival and even surpass human visual abilities in many areas. SAS offers many different solutions to train computers to "see" by identifying and classifying objects, and several groundbreaking papers have been written to demonstrate these techniques. The papers included in this special collection demonstrate how the latest computer vision tools and techniques can be used to solve a variety of business problems.

Computational Intelligence in Pattern Recognition

This book features high-quality research papers presented at the 2nd International Conference on Computational Intelligence in Pattern Recognition (CIPR 2020), held at the Institute of Engineering and Management, Kolkata, West Bengal, India, on 4–5 January 2020. It includes practical development experiences in various areas of data analysis and pattern recognition, focusing on soft computing technologies, clustering and classification algorithms, rough set and fuzzy set theory, evolutionary computations, neural science and neural network systems, image processing, combinatorial pattern matching, social network analysis, audio and video data analysis, data mining in dynamic environments, bioinformatics, hybrid computing, big data analytics and deep learning. It also provides innovative solutions to the challenges in these areas and discusses recent developments.

Advanced Machine Learning Technologies and Applications

This book presents the refereed proceedings of the 5th International Conference on Advanced Machine Learning Technologies and Applications (AMLTA 2020), held at Manipal University Jaipur, India, on February 13 – 15, 2020, and organized in collaboration with the Scientific Research Group in Egypt (SRGE). The papers cover current research in machine learning, big data, Internet of Things, biomedical engineering, fuzzy logic and security, as well as intelligence swarms and optimization.

Deep Learning for Computer Vision

Step-by-step tutorials on deep learning neural networks for computer vision in python with Keras.

Learning OpenCV

Learn OpenCV with Python and C++

Recognition and Perception of Images

This book is dedicated to the unique interdisciplinary research of imagery processing, recognition and perception. The contents of this book are based on the concepts of mathematical processing, compositional analysis applied in the art and design, and psychological factors of the information perception process. The conduction of compositional analysis carried out in the course of images processing and recognition, creation of the image project solution and modeling of the conceptual space structures are considered together with the mechanism of their perception. Edited and written by a group of international experts, the practical applications for industry are covered, including the influence of internet memes on social networks and face recognition technology subject to interferences. The algorithms of perception and improving of accuracy necessary for satellite imagery recognition and complex reflection from the object are represented with the use of artificial neural networks. Not just a study in how humans recognize and perceive images, this outstanding new volume delves into how these processes are used in technology for continuously evolving industrial applications. Whether for the veteran scientist or engineer, or for the student, this is a must-have for any library.

International Virtual Conference on Industry 4.0

This book presents the proceedings of the International Virtual Conference on Industry 4.0 (IVCI4.0 2020). This conference brings together specialists from the academia and industry sectors to promote the exchange of knowledge, ideas, and information on the latest developments and applied technologies in the field of Industry 4.0. The book discusses a wide range of topics such as the design of smart and intelligent products, developments in recent technologies, rapid prototyping and reverse engineering, multistage manufacturing processes, manufacturing automation in the Industry 4.0 model, cloud-based products, and cyber-physical and reconfigurable systems, etc. The volume supports the transfer of vital knowledge to the next generation of academics and practitioners.

Learning OpenCV 3 Application Development

Build, create, and deploy your own computer vision applications with the power of OpenCV About This Book This book provides hands-on examples that cover the major features that are part of any important Computer Vision application It explores important algorithms that allow you to recognize faces, identify objects, extract features from images, help your system make meaningful predictions from visual data, and much more All the code examples in the book are based on OpenCV 3.1 – the latest version Who This Book Is For This is the perfect book for anyone who wants to dive into the exciting world of image processing and computer vision. This book is aimed at programmers with a working knowledge of C++. Prior knowledge of OpenCV or Computer Vision/Machine Learning is not required. What You Will Learn Explore the steps involved in building a typical computer vision/machine learning application Understand the relevance of OpenCV at every stage of building an application Harness the vast amount of information that lies hidden in images into the apps you build Incorporate visual information in your apps to create more appealing software Get acquainted with how large-scale and popular image editing apps such as Instagram work behind the scenes by getting a glimpse of how the image filters in apps can be recreated using simple operations in OpenCV Appreciate how difficult it is for a computer program to perform tasks that are trivial for human beings Get to know how to develop applications that perform face detection, gender detection from facial images, and handwritten character (digit) recognition In Detail Computer vision and machine learning concepts are frequently used in practical computer vision based projects. If you're a novice, this book provides the steps to build and deploy an end-to-end application in the domain of computer vision using OpenCV/C++. At the outset, we explain how to install OpenCV and demonstrate how to run some simple programs. You will start with images (the building blocks of image processing applications), and see how they are stored and processed by OpenCV. You'll get comfortable with OpenCV-specific jargon (Mat Point, Scalar, and more), and get to know how to traverse images and perform basic pixel-wise operations. Building upon this, we introduce slightly more advanced image processing concepts such as filtering, thresholding, and edge detection. In the latter parts, the book touches upon more complex and ubiquitous concepts such as face detection (using Haar cascade classifiers), interest point detection algorithms, and feature descriptors. You will now begin to appreciate the true power of the library in how it reduces mathematically non-trivial algorithms to a single line of code! The concluding sections touch upon OpenCV's Machine Learning module. You will witness not only how OpenCV helps you pre-process and extract features from images that are relevant to the problems you are trying to solve, but also how to use Machine Learning algorithms that work on these features to make intelligent predictions from visual data! Style and approach This book takes a very hands-on approach to developing an end-to-end application with OpenCV. To avoid being too theoretical, the description of concepts are accompanied simultaneously by the development of applications. Throughout the course of the book, the projects and practical, real-life examples are explained and developed step by step in sync with the theory.

Computer Vision with OpenCV 3 and Qt5

Blend the power of Qt with OpenCV to build cross-platform computer vision applications Key Features I Start creating robust applications with the power of OpenCV and Qt combined I Learn from scratch how to develop cross-platform computer vision applications I Accentuate your OpenCV applications by developing them with Qt Book Description Developers have been using OpenCV library to develop computer vision applications for a long time. However, they now need a more effective tool to get the job done and in a much better and modern way. Qt is one of the major frameworks available for this task at the moment. This book will teach you to develop applications with the combination of OpenCV 3 and Qt5, and how to create cross-platform computer vision applications. We'll begin by introducing Qt, its IDE, and its SDK. Next you'll learn how to use the OpenCV API to integrate both tools, and see how to configure Qt to use OpenCV. You'll go on to build a full-fledged computer vision application throughout the book. Later, you'll create a stunning UI application using the Qt widgets technology, where you'll

display the images after they are processed in an efficient way. At the end of the book, you'll learn how to convert OpenCV Mat to Qt QImage. You'll also see how to efficiently process images to filter them, transform them, detect or track objects as well as analyze video. You'll become better at developing OpenCV applications. What you will learn

- Get an introduction to Qt IDE and SDK
- Be introduced to OpenCV and see how to communicate between OpenCV and Qt
- Understand how to create UI using Qt Widgets
- Learn to develop cross-platform applications using OpenCV 3 and Qt 5
- Explore the multithreaded application development features of Qt5
- Improve OpenCV 3 application development using Qt5
- Build, test, and deploy Qt and OpenCV apps, either dynamically or statically
- See Computer Vision technologies such as filtering and transformation of images, detecting and matching objects, template matching, object tracking, video and motion analysis, and much more
- Be introduced to QML and Qt Quick for iOS and Android application development

Who this book is for This book is for readers interested in building computer vision applications. Intermediate knowledge of C++ programming is expected. Even though no knowledge of Qt5 and OpenCV 3 is assumed, if you're familiar with these frameworks, you'll benefit.

Mastering OpenCV Android Application Programming

OpenCV is a famous computer vision library, used to analyze and transform copious amounts of image data, even in real time and on a mobile device. This book focuses on leveraging mobile platforms to build interactive and useful applications. The book starts off with an introduction to OpenCV and Android and how they interact with each other using OpenCV's Java API. You'll also discover basic image processing techniques such as erosion and dilation of images, before walking through how to build more complex applications, such as object detection, image stitching, and face detection. As you progress, you will be introduced to OpenCV's machine learning framework, enabling you to make your applications smarter. The book ends with a short chapter covering useful Android tips and tricks and some common errors and solutions that people might face while building an application. By the end of the book, readers will have gained more expertise in building their own OpenCV projects for the Android platform and integrating OpenCV application programming into existing projects.

Modern PyQt

Dive into GUI application development and create useful applications for practical and relevant topics in the fields of business, computer science, and research. This book uses a realistic approach to help get you started designing and building the applications you need while learning new tools along the way. PyQt has a vast collection of tools that you can use to create GUIs, many of which seem to go unexplored. In Modern PyQt, you will go beyond some of the fundamental topics of GUI development in order to begin building useful desktop applications. Through extensive examples and hands-on projects, you will explore how to make applications for data analysis and visualization using graphs, computer vision with OpenCV and PyQt, the basics of networking, handling databases with SQL, and more! Whether you are looking for new ideas to practice your skills as a programmer or you have a specific goal in mind and need some help to get your ideas off the ground, there is something in Modern PyQt for you! What You Will Learn

- Create cross-platform GUIs with Python and PyQt.
- Understand the important PyQt classes, widgets, and concepts needed for building interactive and practical applications.
- Find out how to embed useful Python modules into your applications to create more advanced GUIs.
- Build useful applications that you can improve or make into something completely new with Python and PyQt.

Who This Book Is For Intermediate level programmers or above in Python. GUI developers with some experience designing GUIs. Even if they have never used PyQt before, the concepts learned from other toolkits, such as Tkinter or wxPython, can be carried over for developing applications with using PyQt.

Advances in Neural Computation, Machine Learning, and Cognitive Research III

This book describes new theories and applications of artificial neural networks, with a special focus on answering questions in neuroscience, biology and biophysics and cognitive research. It covers a wide range of methods and technologies, including deep neural networks, large scale neural models, brain computer interface, signal processing methods, as well as models of perception, studies on emotion recognition, self-organization and many more. The book includes both selected and invited papers presented at the XXI International Conference on Neuroinformatics, held on October 7-11, 2019, in Dolgoprudny, a town in Moscow region, Russia.

TensorFlow Deep Learning Projects

Leverage the power of Tensorflow to design deep learning systems for a variety of real-world scenarios
Key Features Build efficient deep learning pipelines using the popular Tensorflow framework Train neural networks such as ConvNets, generative models, and LSTMs Includes projects related to Computer Vision, stock prediction, chatbots and more Book Description TensorFlow is one of the most popular frameworks used for machine learning and, more recently, deep learning. It provides a fast and efficient framework for training different kinds of deep learning models, with very high accuracy. This book is your guide to master deep learning with TensorFlow with the help of 10 real-world projects. TensorFlow Deep Learning Projects starts with setting up the right TensorFlow environment for deep learning. Learn to train different types of deep learning models using TensorFlow, including Convolutional Neural Networks, Recurrent Neural Networks, LSTMs, and Generative Adversarial Networks. While doing so, you will build end-to-end deep learning solutions to tackle different real-world problems in image processing, recommendation systems, stock prediction, and building chatbots, to name a few. You will also develop systems that perform machine translation, and use reinforcement learning techniques to play games. By the end of this book, you will have mastered all the concepts of deep learning and their implementation with TensorFlow, and will be able to build and train your own deep learning models with TensorFlow confidently. What you will learn Set up the TensorFlow environment for deep learning Construct your own ConvNets for effective image processing Use LSTMs for image caption generation Forecast stock prediction accurately with an LSTM architecture Learn what semantic matching is by detecting duplicate Quora questions Set up an AWS instance with TensorFlow to train GANs Train and set up a chatbot to understand and interpret human input Build an AI capable of playing a video game by itself –and win it! Who this book is for This book is for data scientists, machine learning developers as well as deep learning practitioners, who want to build interesting deep learning projects that leverage the power of Tensorflow. Some understanding of machine learning and deep learning, and familiarity with the TensorFlow framework is all you need to get started with this book.

Advances in Neural Networks - ISNN 2017

This book constitutes the refereed proceedings of the 14th International Symposium on Neural Networks, ISNN 2017, held in Sapporo, Hakodate, and Muroran, Hokkaido, Japan, in June 2017. The 135 revised full papers presented in this two-volume set were carefully reviewed and selected from 259 submissions. The papers cover topics like perception, emotion and development, action and motor control, attractor and associative memory, neurodynamics, complex systems, and chaos.

Data Intelligence and Cognitive Informatics

This book discusses new cognitive informatics tools, algorithms and methods that mimic the mechanisms of the human brain which lead to an impending revolution in understating a large amount of data generated by various smart applications. The book is a collection of peer-reviewed best selected research papers presented at the International Conference on Data Intelligence and Cognitive Informatics (ICDICI 2020), organized by SCAD College of Engineering and Technology, Tirunelveli, India, during 8–9 July 2020. The book includes novel work in data intelligence domain which combines with the increasing efforts of artificial intelligence, machine learning, deep learning and cognitive science to study and develop a deeper understanding of the information processing systems.

Progress in Computing, Analytics and Networking

This book focuses on new and original research ideas and findings in three broad areas: computing, analytics, and networking and their potential applications in the various domains of engineering – an emerging, interdisciplinary area in which a wide range of theories and methodologies are being investigated and developed to tackle complex and challenging real-world problems. The book also features keynote presentations and papers from the International Conference on Computing Analytics and Networking (ICCAN 2019), which offers an open forum for scientists, researchers and technocrats in academia and industry from around the globe to present and share state-of-the-art concepts, prototypes, and innovative research ideas in diverse fields. Providing inspiration for postgraduate students and young researchers working in the field of computer science & engineering, the book also discusses hardware technologies and future communication technologies, making it useful for those in the field of electronics.

Smart Systems: Innovations in Computing

This book features original papers from the 3rd International Conference on Smart IoT Systems: Innovations and Computing (SSIC 2021), presenting scientific work related to smart solution concepts. It discusses scientific works related to smart solutions concept in the context of computational collective intelligence consisted of interaction between smart devices for smart environments and interactions. Thanks to the high-quality content and the broad range of the topics covered, the book appeals to researchers pursuing advanced studies.

Multiple View Geometry in Computer Vision

A basic problem in computer vision is to understand the structure of a real world scene given several images of it. Techniques for solving this problem are taken from projective geometry and photogrammetry. Here, the authors cover the geometric principles and their algebraic representation in terms of camera projection matrices, the fundamental matrix and the trifocal tensor. The theory and methods of computation of these entities are discussed with real examples, as is their use in the reconstruction of scenes from multiple images. The new edition features an extended introduction covering the key ideas in the book (which itself has been updated with additional examples and appendices) and significant new results which have appeared since the first edition. Comprehensive background material is provided, so readers familiar with linear algebra and basic numerical methods can understand the projective geometry and estimation algorithms presented, and implement the algorithms directly from the book.

The 30th SIAR International Congress of Automotive and Transport Engineering

This proceedings book includes papers that cover the latest developments in automotive vehicles and environment, advanced transport systems and road traffic, heavy and special vehicles, new materials, manufacturing technologies and logistics and advanced engineering methods. Authors of the papers selected for this book are experts from research, industry and universities, coming from different countries. The overall objectives of the presentations are to respond to the major challenges faced by the automotive industry, and to propose potential solutions to problems related to automotive technology, transportation and environment, and road safety. The congress is organized by SIAR (Society of Automotive Engineers from Romania) in cooperation with SAE International. The purpose is to gather members from academia, industry and government and present their possibilities for investigations and research, in order to establish new future collaborations in the automotive engineering and transport domain. This proceedings book is just a part of the outcomes of the congress. The results presented in this proceedings book benefit researchers from academia and research institutes, industry specialists, Ph.D. students and students in Automotive and Transport Engineering programs.

Artificial Intelligence for Robotics

Bring a new degree of interconnectivity to your world by building your own intelligent robots Key Features Leverage fundamentals of AI and robotics Work through use cases to implement various machine learning algorithms Explore Natural Language Processing (NLP) concepts for efficient decision making in robots Book Description Artificial Intelligence for Robotics starts with an introduction to Robot Operating Systems (ROS), Python, robotic fundamentals, and the software and tools that are required to start out with robotics. You will learn robotics concepts that will be useful for making decisions, along with basic navigation skills. As you make your way through the chapters, you will learn about object recognition and genetic algorithms, which will teach your robot to identify and pick up an irregular object. With plenty of use cases throughout, you will explore natural language processing (NLP) and machine learning techniques to further enhance your robot. In the concluding chapters, you will learn about path planning and goal-oriented programming, which will help your robot prioritize tasks. By the end of this book, you will have learned to give your robot an artificial personality using simulated intelligence. What you will learn Get started with robotics and artificial intelligence Apply simulation techniques to give your robot an artificial personality Understand object recognition using neural networks and supervised learning techniques Pick up objects using genetic algorithms for manipulation Teach your robot to listen using NLP via an expert system Use machine learning and computer vision to teach your robot how to avoid obstacles Understand path planning, decision trees, and search algorithms in order to enhance your robot Who this book is for If you have basic knowledge about robotics and want to build or enhance your existing robot's intelligence, then Artificial Intelligence for Robotics is for you. This book is also for enthusiasts who want to gain knowledge of AI and robotics.

Modern Approaches in Machine Learning and Cognitive Science: A Walkthrough

This book discusses various machine learning & cognitive science approaches, presenting high-throughput research by experts in this area. Bringing together machine learning, cognitive science and other aspects of artificial intelligence to help provide a roadmap for future research on intelligent systems, the book is a valuable reference resource for students, researchers and industry practitioners wanting to keep abreast of recent developments in this dynamic, exciting and profitable research field. It is intended for postgraduate students, researchers, scholars and developers who are interested in machine learning and cognitive research, and is also suitable for senior undergraduate courses in related topics. Further, it is useful for practitioners dealing with advanced data processing, applied mathematicians, developers of software for agent-oriented systems and developers of embedded and real-time systems.

Advances in VLSI, Signal Processing, Power Electronics, IoT, Communication and Embedded Systems

This book comprises select peer-reviewed papers from the International Conference on VLSI, Signal Processing, Power Electronics, IoT, Communication and Embedded Systems (VSPICE-2020). The book provides insights into various aspects of the emerging fields in the areas Electronics and Communication Engineering as a holistic approach. The various topics covered in this book include VLSI, embedded systems, signal processing, communication, power electronics and internet of things. This book mainly focuses on the most recent innovations, trends, concerns and practical challenges and their solutions. This book will be useful for academicians, professionals and researchers in the area of electronics and communications and electrical engineering.

Computational Intelligence Techniques for Combating COVID-19

This book presents the latest cutting edge research, theoretical methods, and novel applications in the field of computational intelligence and computational biological approaches that are aiming to combat COVID-19. The book gives the technological key drivers behind using AI to find drugs that target the virus, shedding light on the structure of COVID-19, detecting the outbreak and spread of new diseases, spotting signs of a COVID-19 infection in medical images, monitoring how the virus and lockdown is affecting mental health, and forecasting how COVID-19 cases and deaths will spread across cities and why. Further, the book helps readers understand computational intelligence techniques combating COVID-19 in a simple and systematic way. Provides a comprehensive reference covering innovations and development of theories, conceptual models and computational algorithms focused on COVID-19; Asserts all relevant research, key themes, complex adaptive systems, metrics and paradigms dedicated towards COVID-19, enabled with evolutionary methods of computational sciences; Explores how AI and computational techniques can help to predict which patients with the virus would go on to develop Acute Respiratory Distress Syndrome (ARDS).

Information Security and Cryptology

This book constitutes the post-conference proceedings of the 16th International Conference on Information Security and Cryptology, Inscrypt 2020, held in, China, in December 2020. Due the COVID-19, the conference was held online and physical. The 24 full papers presented together with 8 short papers were carefully reviewed and selected from 79 submissions. The papers presents papers about research advances in all areas of information security, cryptology, and their applications.

Computational Vision and Bio-Inspired Computing

This book includes selected papers from the 5th International Conference on Computational Vision and Bio Inspired Computing (ICCVBIC 2021), held in Coimbatore, India, during November 25–26, 2021. This book presents state-of-the-art research innovations in computational vision and bio-inspired techniques. The book reveals the theoretical and practical aspects of bio-inspired computing techniques, like machine learning, sensor-based models, evolutionary optimization and big data modeling and management that make use of effectual computing processes in the bio-inspired systems. It also contributes to the novel research that focuses on developing bio-inspired computing solutions for various domains, such as human–computer interaction, image processing, sensor-based single processing, recommender systems and facial recognition, which play an indispensable part in smart agriculture, smart city, biomedical and business intelligence applications.

Deep Learning

How can machine learning--especially deep neural networks--make a real difference in your organization? This hands-on guide not only provides practical information, but helps you get started building efficient deep learning networks. The authors provide the fundamentals of deep learning--tuning, parallelization, vectorization, and building pipelines--that are valid for any library before introducing the open source Deeplearning4j (DL4J) library for developing production-class workflows. Through real-world examples, you'll learn methods and strategies for training deep network architectures and running deep learning workflows on Spark and Hadoop with DL4J.

Advances in Data Science and Intelligent Data Communication Technologies for COVID-19

This book presents the emerging developments in intelligent computing, machine learning, and data mining. It also provides insights on communications, network technologies, and the Internet of things. It offers various insights on the role of the Internet of things against COVID-19 and its potential applications. It provides the latest cloud computing improvements and advanced computing and addresses data security and privacy to secure COVID-19 data.

This is Our Message

"Evangelical women have been national leaders in the New Christian Right since its ascendancy in the 1970s. This book focuses on four women - Marabel Morgan, Anita Bryant, Beverly LaHaye, and Tammy Faye Bakker - and traces their legacies in the twenty-first century careers of Sarah Palin and Michele Bachmann"--

This Is Our Message

Over the past 50 years, the architects of the religious right have become household names: Jerry Falwell, Pat Robertson, James Dobson. They have used their massively influential platforms to build the profiles of evangelical politicians like Mike Huckabee, Rick Perry, and Ted Cruz. Now, a new generation of leaders like Jerry Falwell Jr. and Robert Jeffress enjoys unprecedented access to the Trump White House. What all these leaders share, besides their faith, is their gender. Men dominate the standard narrative of the rise of the religious right. Yet during the 1970s and 1980s nationally prominent evangelical women played essential roles in shaping the priorities of the movement and mobilizing its supporters. In particular, they helped to formulate, articulate, and defend the traditionalist politics of gender and family that in turn made it easy to downplay the importance of their leadership roles. In *This Is Our Message*, Emily Johnson begins by examining the lives and work of four well-known women-evangelical marriage advice author Marabel Morgan, singer and anti-gay-rights activist Anita Bryant, author and political lobbyist Beverly LaHaye, and televangelist Tammy Faye Bakker. The book explores their impact on the rise of the New Christian Right and on the development of the evangelical subculture, which is a key channel for injecting conservative political ideas into purportedly apolitical spaces. Johnson then highlights the ongoing significance of this history through an analysis of Sarah Palin's vice presidential candidacy in 2008 and Michele Bachmann's presidential bid in 2012. These campaigns were made possible by the legacies of an earlier generation of conservative evangelical women who continue to impact our national conversations about gender, family, and sex.

This Is Our Message

The western world is seeing a rise in intolerance, hate, and violence. The media exacerbates this by painting inaccurate pictures of immigrants, minorities, and of Islam and Muslims in particular. Consequently, there is a pressing need for clarifying what Islam is and is not, so as to foster mutual brotherhood amongst people of all beliefs. In four speeches delivered during a tour of the United States and Guatemala, His Holiness Mirza Masroor Ahmad, head of the worldwide Ahmadiyya Muslim Community, offers a formula for achieving peace in our communities, nations, and indeed throughout the world. His Holiness explains that the true purpose of mosques is to be a center of peace where Muslims join together in order to worship God Almighty and to serve humanity, irrespective of belief or background. Furthermore, the building of hospitals enables the service of mankind which itself becomes a form of worship. This cumulative spirit is the way to protect our future and enable us to leave behind a better world for our children.

“Our Mission and our Message.” A sermon [on Acts v. 20], preached at the general ordination, in the Cathedral Church of Gloucester, ... September 27th, 1863

Although most evangelical traditions bar women from ordained ministry, many women have carved out unofficial positions of power in their husbands' spiritual empires or their own ministries. The biggest stars write bestselling books, grab high ratings on Christian television, and even preach. Bowler offers a sympathetic and revealing portrait of megachurch women celebrities, showing how they must balance the demands of celebrity culture and conservative, male-dominated faiths. And black celebrity preachers' wives carry a special burden of respectability. A compelling account of women's search for spiritual authority in the age of celebrity. -- adapted from jacket

A Message for Our Time

An Honorific Gospel: Biblically Faithful & Culturally Relevant Christians engaged in communicating the gospel navigate a challenging tension: faithfulness to God's ancient, revealed Word—and relevance to the local, current social context. What if there was a lens or paradigm offering both? Understanding the Bible—particularly the gospel—through the ancient cultural “language” of honor-shame offers believers this double blessing. In *Honor, Shame, and the Gospel*, over a dozen practitioners and scholars from diverse contexts and fields add to the ongoing conversation around the theological and missiological implications of an honorific gospel. Eight illuminating case studies explore ways to make disciples in a diversity of social contexts—for example, East Asian rural, Middle Eastern refugee, African tribal, and Western secular urban. *Honor, Shame, and the Gospel* provides valuable resources to impact the ministry efforts of the church, locally and globally. Linked with its ancient honor-shame cultural roots, the gospel, paradoxically, is ever new—offering fresh wisdom to Christian leaders and optimism to the church for our quest to expand Christ's kingdom and serve the worldwide mission of God.

Our Message is Jesus Christ

The Message's unique verse-numbering system makes it an ideal Bible study companion.

The Preacher's Wife

THINGS WERE DIFFERENT IN THE CHURCH JESUS STARTED We sing songs to Jesus. We pray to Jesus. But do we really know and understand what Jesus preached? Before you say, "Yes," and move on, consider these shocking facts: • Most messages preached today have nothing to do with Jesus' core message • Christian universities that train pastors, missionaries, and priests don't have courses that teach what Jesus taught, and it's been this way for hundreds of years • The majority of believers in Christ have little or no understanding of what Jesus said or what He meant when He said it God is realigning His church with the message Jesus preached, and He's doing it to prepare us for Jesus' return. Get ready for a journey through the Bible that will help you: • Challenge your Christian experience and knowledge of Jesus' teachings • Learn the true heart of Christ's teachings as recorded in God's Word • Discover the Kingdom life Jesus provided for, exemplified, and taught • Shed any belief barriers that have inhibited your spiritual life to this point • Embrace and renew a walk with God that is alive, growing, fresh, and purposeful

Honor, Shame, and the Gospel

We have misunderstood Paul, badly. We have read his words through our own set of assumptions. We need to begin with Paul's world view, to see things the way he saw them. - What if 'original sin' was never part of Paul's thinking? - What if the idea that we are saved by faith in Christ, as Luther argued, was based on a mistranslation of Paul's words and a misunderstanding of Paul's thinking? 'Over the centuries,' writes Steve Chalke, 'the Church has repeatedly failed to communicate, or even understand, the core of Paul's message. Although Paul has often been presented as the champion of exclusion, he was the very opposite. He was the great includer.' Steve Chalke MBE is a Baptist minister, founder and leader of the Oasis Charitable Trust, and author of more than 50 books.

The Message Stone and Purple Lthr Look

Join popular cultural and faith leaders in these five-session DVD studies that will challenge your innermost beliefs and preconceived ideas about life, faith, the world and cultural responsibility.

The Message Jesus Preached

Helps Christians to share their faith in today's world confidently and effectively. The world has changed in so many ways, and many of us no longer feel confident when it comes to evangelism, especially with the rise of hostility towards Christian points of view. Keeping quiet is becoming our default position. Yet the world has not changed in one way-it still needs Jesus. Renowned evangelist Becky Pippert draws on decades of conversations about Christianity around the world to call and equip ordinary Christians to share Jesus through their ordinary day-to-day conversations. She shows that by leaning on our extraordinary God, such conversations can, and often do, have extraordinary results. They will transform hearts, transform society, and transform the world! Weaving Bible teaching with compelling stories, Stay Salt is the next generation "Out of the Saltshaker" for this new era. It will give readers the confidence share Jesus like Jesus-relevantly, thoughtfully, and effectively. Contains discussion questions for small groups at the end of each chapter.

The Lost Message of Paul

The Kingdom of God has been the talk of the world since John the Baptist arrived on the scene to prepare the way for the Messiah. After the baptism of Christ, Jesus continued the message of John: Repent for the Kingdom of Heaven is near. Moves of God throughout history have begun with this message. Jesus taught His disciples to pray, Thy kingdom come, thy will be done on earth as it is in heaven. Whatever occurs on earth happens as a result of prayer and takes place in heaven first. Heaven wants revival; heaven desires miracles, and we are the vehicles through which His Spirit works. It is going to take people who carry great vision and passion for us to establish kingdom power and authority in our generation. The power and purpose of God has never changed, nor has His strength weakened. Every generation has relied on men and women of God to make visible the invisible presence of God through signs, wonders, and miracles. The same Spirit that raised Christ from the dead is awaiting vessels (people) who will represent His cause to a searching world. We have to go no further than our backyards to find a field awaiting harvest. The marketplace is clamoring for success with

meaning eternal meaning. Neighborhoods are flourishing with young minds looking for leadership, and nations are longing for a message of hope. This is our generation, and the command to Go remains the same. We go in the name that is above all names, Jesus. The foundation for all that we do must be love. The apostle Paul admonishes us by saying, For in Christ Jesus neither circumcision nor uncircumcision has any value. The only thing that counts is faith expressing itself through love (Galatians 5:6 NIV). Let our expression and our message be saturated with love. Love covers over a multitude of sins (1 Peter 4:8b NIV). Love never fails (1 Corinthians 13:8a NIV).

The Whole Gospel

Maybe you're troubled by the disconnect between the words you speak and the life you live. Maybe you'd like to see your faith become more active and life-changing in the world around you. Pastor Kerry and Chris Shook felt that way. Even though their calling involved preaching and teaching, they became weary of sermons and words. They felt a gap between what they were saying and the needs of people around them. They decided to do something about it. Be the Message is their story of waking up to the gospel—not just a gospel of words and sermons, but the gospel of intention and action and people. They discovered a profound secret: You Are the Gospel As they explored the deeper truths of scripture, the verse “the word of God lives in you” came alive. Digging deeper, they discovered that the gospel message is really about life message—your life lived out. God's call to you is simple: Be the Message Be the Message opens up a new world of understanding about what God calls you to. As the Shooks learned, the gospel is not about what you say. It's about who you are and what you do—and how you can be God's hands and feet in the world. What would happen if we talked about God less and walked with God more? Be the Message reminds us that Christianity was meant to be a faith of action, not a faith of words. Yet often we sacrifice doing something for the sake of talking about it. When we actually act out on our faith, we find our faith grows even more. You can do more than nothing. People's lives are changed when you allow your life to be the gospel to the world. Living out the gospel in the world today is both simple and costly. The Shooks explore that paradox through biblical stories and their own experience of making a decision to live out the gospel in practical ways. Choosing to be the gospel changed their family, church and personal relationships with God. How can it change your life?

Stay Salt

'Our Message' is a compilation of testimonials, from everyday Christians sharing their faith. By combining the recounted stories of how God worked in their lives, with supported biblical references, this work provides a deeper understanding of the Christian faith and how it underpins everyday life. Primarily proposed as a gift book for Christians to give to non-Christians, 'Our Message' provides a platform to open the dialogue for understanding in a personal and effective manner. Designed and prepared by professional photographer, Greg Miller, 'Our Message' utilises stunning photography to illustrate the key Christian principles behind each testimonial. Reworked, these images are then provided as pullout postcards for you to share the experience and show others the beauty of our world through the eyes of God. Whether you seek a deeper understanding of the Christian faith or need a simple dose of spiritual encouragement, 'Our Message' will provide you a fresh perspective.

Get in the Go

This year marks the golden anniversary of the Art Ensemble of Chicago, the flagship band of the Association for the Advancement of Creative Musicians. Formed in 1966 and flourishing until 2010, the Art Ensemble distinguished itself by its unique performance practices—members played hundreds of instruments on stage, recited poetry, performed theatrical sketches, and wore face paint, masks, lab coats, and traditional African and Asian dress. The group, which built a global audience and toured across six continents, presented their work as experimental performance art, in opposition to the jazz industry's traditionalist aesthetics. In Message to Our Folks, Paul Steinbeck combines musical analysis and historical inquiry to give us the definitive study of the Art Ensemble. In the book, he proposes a new theory of group improvisation that explains how the band members were able to improvise together in so many different styles while also drawing on an extensive repertoire of notated compositions. Steinbeck examines the multimedia dimensions of the Art Ensemble's performances and the ways in which their distinctive model of social relations kept the group performing together for four decades. Message to Our Folks is a striking and valuable contribution to our understanding of one of the world's premier musical groups.

Appendix to the Journals of the House of Representatives of New Zealand

It's All Who You Know When Working the System Here
How to Get to Know the Right People
The world's attention turned to the U.S. Capitol on January 20, 2009, when Barack Obama took the Presidential oath of office. But inside the building, changes had already taken place that would have broad implications for his agenda. The 111th Congress had convened on January 6 with a far stronger Democratic majority than the one that had preceded it. Their ambitious legislative agenda requires the assistance of their staffs to prepare them for all the important issues on the legislative table. Thus, it is more important than ever to know about senior congressional committee staff members and the role they play in shaping today's legislation. While members of the House of Representatives and the Senate enact laws, it is often their staffers who exert the greatest influence in the lawmaking process. Staffers advise their elected bosses, establish political positions on issues, craft legislation, put policies in place, and play important roles on scores of congressional committees. The next time you need to find out who is the most effective person to advocate your cause, turn to the Insider's Guide for all the answers. Overall it provides access to an important, if not very visible, component of the legislative process. Recommended-CHOICE The Insider's Guide to Key Committee Staff of the U.S. Congress contains in-depth profiles on key congressional staff members that you will not find elsewhere. The information provided on these personnel gives you not only the contact information and other pertinent data but also the inside track to those people. These are the staffers who work with and support the representatives and senators in various important roles that help to enact change or refine existing laws and codes that govern our nation. With all the sweeping changes that have taken place since the Obama administration took office, this essential resource has never been more important or more valuable. This new edition features over 125 new profiles and is designed to be the ultimate for quick and easy reference. The Insider's Guide is the leading source for information on more than 600 congressional staff members. The profiles included feature: In-depth biographical information Detailed professional history and educational background Staff members' areas of expertise and committee role Up-to-date contact information and photograph, when available Staffers' own insights as to their committee's priorities and special projects during this session of Congress Organized by House, Senate, and Joint committee assignments, you'll find both the person you're looking for and information on his or her individual impact on legislation and decision-making. With this Insider's Guide, you'll never again need to question who is the most effective person to advocate your cause.

Be the Message

Techniques, technologies, and applications - the arts and sciences of interrogating criminal suspects, their victims, and the witnesses to their crimes. Sounds exciting, doesn't it? Well, it's a little more than that. It's a kind of a gets you all tingly. Wow! And doesn't it just set you to thinking about gladiators locked in the deadly dance of hand-to-hand combat? Secrets takes you through the entire process of interrogation from start to finish; BUT, if you were expecting "waterboarding" and other inefficient methods of torture - FORGET IT! The Adversarial Interview not only works but it's legal!

Our Message

Why do we need better communication skills? It's the question many church leaders are asking; "What can our church do to reach more people?" The question arises from two convictions. First, we are commanded to compel people into the Kingdom and we are to be witnesses of Jesus and the gospel to everyone. But we have a haunting sense that we have not yet completed this "great commission". The second conviction is that our church will die if we don't reach more people. A changing world is putting our message and method to the test. How can we be true to the message and, at the same time, use all the tools, resources, and skills we now have available? Jerry believes God gives the increase and people don't come to the Father unless the Spirit convicts and draws them. But, he focuses on the part we must play in the process. God's word says we must "plant" and "water" the seed of the gospel. He says we are to proclaim His truth and compel people into the Kingdom by always communicating the reason for our faith. Jerry believes we are inviting but not compelling! This book gives clear direction as to how we should word our message and how to use every communication method available to us, and in the best possible way. He has given us a clear and practical plan for a more effective, yet practical strategy of church communication. Jerry Wilkins has his B.A. in marketing and has his Masters from Southwestern Seminary. He has studied and applied marketing and communication skills first as a Pastor and then as a denominational leader for thirty years. He is respected as a church communication

strategist. He has authored several books including *Marketing Your Sunday School*, *Smooth Sailing: Avoiding Storms in Your Ministry*, and *Resolving Conflict God's Way*. Jerry resides in Alabama with his wife of 50 years and has two grown children and one granddaughter.

Insider's Guide to Key Committee Staff of the U.S. Congress 2009

My dear little one, I smile on you even though you think you are wounded beyond repair, no one is beyond repair only those that wish to stay that way!"When you hold the book, you hold Me, your Mediatrix of all Grace. At any moment no matter where you are and you feel worried or you have lost your peace or you simply need Me, open the book at any page and follow My words and in that moment you will experience that deep calm that is within My Immaculate Heart."How to use the book: <https://www.olmoms.org/en/the-messages-of-mercy/>

Diary of David Zeisberger, a Moravian missionary among the Indians of Ohio. 1885

The objective of the 2014 International Conference on Computer, Network Security and Communication Engineering (CNSCE2014) is to provide a platform for all researchers in the field of Computer, Network Security and Communication Engineering to share the most advanced knowledge from both academic and industrial world, to communicate with each other about their experience and most up-to-date research achievements, and to discuss issues and future prospects in these fields. As an international conference mixed with academia and industry, CNSCE2014 provides attendees not only the free exchange of ideas and challenges faced by these two key stakeholders and encourage future collaboration between members of these groups but also a good opportunity to make friends with scholars around the world. As the first session of the international conference on CNSCE, it covers topics related to Computer, Network Security and Communication Engineering. CNSCE2014 has attracted many scholars, researchers and practitioners in these fields from various countries. They take this chance to get together, sharing their latest research achievements with each other. It has also achieved great success by its unique characteristics and strong academic atmosphere as well as its authority.

Hearings, Nov. 15, 1945-May 31, 1946

The earth, our home, is in crisis. There are two sides to this crisis—our global economy, and its effect on the ecology of our home planet. Despite conventional thinking that typical monetary and fiscal manipulations will put us back on the path of economic growth, the reality is not that simple. Meanwhile, the natural environment is sending unmistakable warnings. Glaciers are melting; oceans are becoming dangerously acidic; species and their ecological services are becoming extinct; and weather patterns are becoming increasingly severe and unpredictable each year. The stress on resource systems of all kinds threatens to shrink the carrying capacity of the planet, even as we call upon it for increased contributions to support a burgeoning human population. Co-written by an ecologist and an economist, *Economics and Ecology: United for a Sustainable World* counsels the replacement of symptomatic thinking with a systemic worldview that treats the environment and the economy as an ecosystemic unit. The first part of the book establishes the methodological and biophysical principles needed to develop the concept of socioeconomic sustainability. The second part of the book examines the misuse of economics in the service of what increasingly appears to be a ruinous pursuit of material wealth and expansion. The third part offers advice on reconciling economics and ecology by proposing an economics in which the principles employed are aligned with the biophysical principles of ecology. This timely volume puts forth a sustainable worldview based on systemic thinking, with the emphasis

more on what and how people think than on what they do. A unique reference for professionals and laypersons alike, it can also serve as a supplementary classroom text for students of economics, ecology, biology, and environmental science.

The Organic Union in God's Relationship with Man

Al-Qur'an, the Guidance for mankind, is a unique translation of the Holy Qur'an in contemporary American English. It includes the Biography of the Prophet Muhammad, peace be upon him, his mission as a Prophet, his ranking as in the human history. Text is paragraphed by theme and theme is written in the margins on each page for easy reference. Its features include - (1) Field Testing the Communication of Divine Message: The unique feature of this translation is its field testing for over 3 1/2 years to improve the communication and understanding of the Divine Message. Translation passages were given to the New Muslim and Non-Muslim high school and college students for reading under the supervision of various Ulema (scholars). After reading, the person was asked to explain as to what he/she understood from the passage. If his/her understanding was the same as is in the Arabic Text of the Holy Qur'an then we concluded that we have been successful in conveying the Divine Message properly. If his/her understanding was different than what the Qur'anic verses were stating, we kept on rewording the translation until those verses were understood properly. It was tremendous patience on part of the participants. May Allah reward them all. (2) Simplicity: In this translation Simple Language and Direct Approach is used for appealing to the common sense of scholars and common people. (3) Understandability: There are no foot notes to refer and no commentary or lengthy explanations to read. All necessary explanations have been incorporated right there in the text with italic type setting to differentiate from the translation of the meanings of Qur'anic Arabic Text. (4) Outline of Pertinent Information: Before the start of each Srah, information relating to its Period of Revelation, Major Issues, Divine Laws and Guidance has been presented as an outline. Then a summary of the preceding events has been tabulated for the reader to understand the historical background to grasp the full meaning of the Divine Message. (5) Reviews, Input and Approvals: This project was started in 1991 and initial draft completed in 1994. Then the Translation was sent to different Ulema (Scholars) in Town and throughout United States for their review and input. After their reviews and input it was sent to Jme Al-Azhar Al-Sharif in Egypt, Ummal Qur in Saudi Arabia and International Islamic University in Pakistan for their review, input and approval. This translation was published after their reviews and approvals.

Secrets of the Adversarial Interview

The two-volume set LNCS 8802 and LNCS 8803 constitutes the refereed proceedings of the 6th International Symposium on Leveraging Applications of Formal Methods, Verification and Validation, ISoLA 2014, held in Imperial, Corfu, Greece, in October 2014. The total of 67 full papers was carefully reviewed and selected for inclusion in the proceedings. Featuring a track introduction to each section, the papers are organized in topical sections named: evolving critical systems; rigorous engineering of autonomic ensembles; automata learning; formal methods and analysis in software product line engineering; model-based code generators and compilers; engineering virtualized systems; statistical model checking; risk-based testing; medical cyber-physical systems; scientific workflows; evaluation and reproducibility of program analysis; processes and data integration in the networked healthcare; semantic heterogeneity in the formal development of complex systems. In addition, part I contains a tutorial on automata learning in practice; as well as the preliminary manifesto to the LNCS Transactions on the Foundations for Mastering Change with several position papers. Part II contains information on the industrial track and the doctoral symposium and poster session.

How to Reach More People

This concise volume presents key concepts and entries from the twelve-volume ICA International Encyclopedia of Communication (2008), condensing leading scholarship into a practical and valuable single volume. Based on the definitive twelve-volume IEC, this new concise edition presents key concepts and the most relevant headwords of communication science in an A-Z format in an up-to-date manner. Jointly published with the International Communication Association (ICA), the leading academic association of the discipline in the world. Represents the best and most up-to-date international research in this dynamic and interdisciplinary field. Contributions come from hundreds of authors who represent excellence in their respective fields. An affordable volume available in print or online.

Diary of David Zeisberger

Move Our Message: How to Get America's Ear can help you make change happen. It's packed with practical guidance on "speaking American" about your issues, connecting deeply with your audience, and framing lively political messages that spread. Based on The Metaphor Project's time-tested methods and tools, the book offers a systematic, up-to-date approach to mainstreaming our messages. All proceeds from book sales support our pro bono work.
