International Legal Issues Arising Under the United Nations Decade of International Law

The State of Qatar, the Asian-African Legal Consultative Committee (AALCC), in cooperation with the Secretariat of the United Nations and Frère Cholmeley (Paris) organised the Conference on International Legal Issues Arising under the United Nations Decade of International Law in Doha, Qatar on 22--25 March 1994. Around 60 speakers and 200 participants from more than 40 nations freely expressed their views on the progressive development of international law and its codification with a view to States' actions in the future adhering to the principles of international law as enshrined in the Charter of the United Nations. The subjects dealt with by the Conference had one thing in common: they were all topical issues or, in French, 'des questions d'actualité', and will remain thus throughout the United Nations Decade of International Law. The various themes were Environmental Law, the Law of the Sea, the Settlement of Disputes, Humanitarian Law, and the Rio Conference, Post-Rio and the New International Economic Order. This book which contains the Conference proceedings will be of great interest to lawyers specializing in international law. The book is not only a photograph of some very important issues as they existed and were perceived in 1994, it will also serve as a reference book and a unique tool which will be indispensable to understanding some of the most crucial legal problems with which the world community is faced today.

International Legal Issues Arising Under the United Nations Decade of International Law

The State of Qatar, the Asian-African Legal Consultative Committee (AALCC), in cooperation with the Secretariat of the United Nations and Frère Cholmeley (Paris) organised the Conference on

International Legal Issues Arising under the United Nations Decade of International Law in Doha, Qatar on 22--25 March 1994. Around 60 speakers and 200 participants from more than 40 nations freely expressed their views on the progressive development of international law and its codification with a view to States' actions in the future adhering to the principles of international law as enshrined in the Charter of the United Nations. The subjects dealt with by the Conference had one thing in common: they were all topical issues or, in French, 'des questions d'actualité', and will remain thus throughout the United Nations Decade of International Law. The various themes were Environmental Law, the Law of the Sea, the Settlement of Disputes, Humanitarian Law, and the Rio Conference, Post-Rio and the New International Economic Order. This book which contains the Conference proceedings will be of great interest to lawyers specializing in international law. The book is not only a photograph of some very important issues as they existed and were perceived in 1994, it will also serve as a reference book and a unique tool which will be indispensable to understanding some of the most crucial legal problems with which the world community is faced today.

Internally Displaced Persons and International Refugee Law

Internally Displaced Persons (IDPs) are persons who have been forced to leave their places of residence as a result of armed conflict, violence, human rights violations, or natural or human-made disasters, but who have not crossed an international border. There are about 55 million IDPs in the world today, outnumbering refugees by roughly 2:1. Although IDPs and refugees have similar wants, needs and fears, IDPs have traditionally been seen as a domestic issue, and the international legal and institutional framework of IDP protection is still in its relative infancy. This book explores to what extent the protection of IDPs complements or conflicts with international refugee law. Three questions form the core of the book's analysis: What is the legal and normative relationship between IDPs and refugees? To what extent is an individual's real risk of internal displacement in their country of origin relevant to the qualification and cessation of refugee status? And to what extent is the availability of IDP protection measures an alternative to asylum? It argues that the IDP protection framework does not, as a matter of law, undermine refugee protection. The availability of protection within a country of origin cannot be a substitute for granting refugee status unless it constitutes effective protection from persecution and there is no real risk of refoulement. The book concludes by identifying current and future challenges in the relationship between IDPs and refugees, illustrating the overall impact and importance of the findings of the research, and setting out questions for future research.

Research Handbook on International Refugee Law

In an age of ethnic nationalism and anti-immigrant rhetoric, the study of refugees can help develop a new outlook on social justice, just as the post-war international order ends. The global financial crisis, the rise of populist leaders like Trump, Putin, and Erdogan, not to mention the arrival of anti-EU parties, raises the need to interrogate the refugee, migrant, citizen, stateless, legal, and illegal as concepts. This insightful Research Handbook is a timely contribution to that debate.

Military Necessity in International Cultural Heritage Law

Berenika Drazewska's book offers a comprehensive scholarly analysis of the current meaning of military necessity in the international legal framework for the protection of cultural heritage during armed conflicts.

Making Better International Law

This publication contains the texts of the papers presented at the UN Colloquium, together with a record of those presentations and of the discussions which took place around them.

Contemporary International Law Issues: Sharing Pan-European and American Perspectives

"Contemporary International Law Issues: Sharing Pan-European and American Perspectives" is the record of the First Joint Conference of The American Society of International Law and the Nederlandse Vereniging voor Internationaal Recht, which was held in The Hague, The Netherlands on July 4-6, 1991. At this event international scholars, practitioners and experts gathered to discuss the latest developments in such areas as trade and investment, the environment, human rights, settlement of disputes and commercial arbitration, with particular reference to the Middle East, Central and Eastern Europe, and the European Community. The conference focused especially on Pan-European

perspectives on current international legal issues. The content of these Proceedings is evidence of the wide range of dialogue that occurred during the Joint Conference. The book provides a record of this dialogue and directs the reader to issues which might form suitable subjects for further research and elaboration in other scholarly work. The book will be of interest to academics and diplomats, as well as legal practitioners.

Global Justice, Human Rights and the Modernization of International Law

This book is based on the observation that international law is undergoing a process of change and modernization, driven by many factors, among which the affirmation and consolidation of the role of the individual and of the theory of human rights stand out. In the contemporary world, international law has demonstrated an ability to evolve rapidly. But it is still unclear whether its modernization process is also producing structural changes, which affect the subjects, the sources and even the very purpose of this law. Is it truly possible to speak of a paradigmatic and ideological change in the international legal system, one that also involves a transition from a state-centred international order to a human-centred one, and from inter-state justice to global justice? The book addresses three fundamental aspects of the modernization process of international law: the possible widening of the concept of international community and of the classic assumptions of statehood; the possible diversification of the sources of general international law; and the ability of international law to adapt to new challenges and to achieve the main goals for humanity set by the United Nations. The overall objective of the book is to provide the tools for a deeper understanding of the transition phase of contemporary international law, by examining the major problems that characterize this phase. The book will also stimulate critical reflection on the future prospects of international law.

The Influence of Human Rights on International Law

This volume discusses the impact of human rights law on other fields of international law. Does international human rights law modify other fields of international law? Contributions focus on possible spillover effects of human rights on international economic or international criminal law. Does international human rights law have a streamlining effect on international law as a whole? This might be identified as a process of constitutionalisation. In this book, human rights can be understood as one of the core principles of international legal order and thus have an effect on the general law of treaties or on the settlement of disputes. Although human rights law is a relatively young field of international law, its content and core values today are of major importance for the interpretation of international law as a whole. As we witness a redefinition of sovereignty as a responsibility of states towards the people and a shift to greater relevance of the individual in international law in general, it is a logical consequence that human rights have an impact on other areas of international law.

Rethinking International Law and Justice

This collection considers how general principles of law and underlying theories of justice from political science and international relations make a significant contribution to our understanding of the constituent elements of global justice. The book explores justice arising in specific areas of international law, including international humanitarian law, and examines the significance of non-state actors for the development of international law. The lessons derived from this research have wide implications for both developed and emerging nation-states in rethinking sensitive issues of international law and justice.

Legitimacy and Accountability in International Law

The chapters in this volume have their origins in papers presented at a Workshop held at Lund University in Sweden. The Workshop gathered together experts from Europe, the United States and Australia, including leading academics as well as representatives from the ICRC, the Swedish, Norwegian and Danish Red Cross Societies and the Swedish and Norwegian governments, to examine the relevance and adequacy of the existing regime for environmental protection during armed conflict as well as the ability of other international legal mechanisms to contribute to the amelioration of damage to the environment arising as a result of or in relation to armed conflict.

NAFTA, Law and Business Review of the Americas

This volume examines the role of international law in the Security Council's decisions and decision-making process since the end of the Cold War, with the principle of legality as theoretical framework.

War and the Environment

Representing the definitive reference work for this broad and dynamic field, The International Encyclopedia of Geography arises from an unprecedented collaboration between Wiley and the American Association of Geographers (AAG) to review and define the concepts, research, and techniques in geography and interrelated fields. Available as a robust online resource and as a 15-volume full-color print set, the Encyclopedia assembles a truly global group of scholars for a comprehensive, authoritative overview of geography around the world. Contains more than 1,000 entries ranging from 1,000 to 10,000 words offering accessible introductions to basic concepts, sophisticated explanations of complex topics, and information on geographical societies around the world Assembles a truly global group of more than 900 scholars hailing from over 40 countries, for a comprehensive, authoritative overview of geography around the world Provides definitive coverage of the field, encompassing human geography, physical geography, geographic information science and systems, earth studies, and environmental science Brings together interdisciplinary perspectives on geographical topics and techniques of interest across the social sciences, humanities, science, and medicine Features full color throughout the print version and more than 1,000 illustrations and photographs Annual updates to online edition

The United Nations Security Council in the Post-Cold War Era

"Discussions on U.S. border enforcement have traditionally focused on the highly charged U.S.-Mexico boundary, inadvertently obscuring U.S.-Caribbean relations and the concerning asylum and detention policies unfolding there. Boats, Borders, and Bases offers the missing, racialized histories of the U.S. detention system and its relationship to the interception and detention of Haitian and Cuban migrants. It argues that the U.S. response to Cold War Caribbean migrations actually established the legal and institutional basis for contemporary migration and detention, and border-deterrent practices in the United States. This book promises to make a significant contribution to a truer understanding of the history and geography of the U.S. detention system overall."--Provided by publisher.

Thematic Procedures of the United Nations Commission on Human Rights and International Law

Through an analysis of UN operations including international territorial administration, refugee camps, peacekeeping, the implementation of sanctions and the provision of humanitarian aid, this book shows that the powers exercised by the UN carry a serious risk of human rights abuse. The International Law Commission has codified and developed the law of institutional responsibility, but, while indispensable, these principles and rules cannot on their own ensure compliance and accountability. The 'liberty deficit' of the UN and of other international organisations thus remains an urgent legal and political problem. Some solutions may be available; indeed, recent state and institutional practice offers interesting examples in this respect. But at a fundamental level we need to ask ourselves whether, judged on the basis of the principle of liberty, the power shift from states to international organisations is always beneficial.

International Encyclopedia of Geography, 15 Volume Set

The open access publication of this book has been published with the support of the Swiss National Science Foundation. Climate change is forcing us to consider the right of people to leave their disappearing homelands, and the shape this right should take. Climate Change, Disasters and People on the Move proposes international protection as a solution with three pillars: granting protection against return to the country of origin (non-refoulement); preventing future displacement; and facilitating safe, orderly, and regular migration in the context of disasters and climate change. Dr. Aylin Yildiz Noorda uses the theories of common concern of humankind and community interests to operationalise her proposal, providing a blueprint for future claims.

Boats, Borders, and Bases

The association's Report of the executive council, 1913/15, includes papers prepared for a proposed 1914 conference at the Hague.

The UN and Human Rights

With 'displacement' as the guiding thread, the purpose of this study is twofold. Firstly, it derives from the relevant provisions of international humanitarian law a legal framework for the protection of displaced persons in armed conflict, both from and during displacement. It contains a case study on Israeli settlements in the Occupied Palestinian Territory and the recent Advisory Opinion on the Separation Wall, and addresses such issues as humanitarian assistance for displaced persons, the treatment of refugees in the hands of a party to a conflict and the militarisation of refugee camps. Secondly, it examines the issue of displacement within the broader context of civilian war victims and identifies and addresses the normative gaps of international humanitarian law, including the inadequacy of concepts such as 'protected persons' and the persistence of the dichotomy between international and non-international armed conflicts, which is at odds with the realities of contemporary armed conflicts.

Climate Change, Disasters and People on the Move

This book assesses the impact that pronouncements by the International Court of Justice (ICJ) have had on international law. It provides a comprehensive overview of the role of the ICJ in the contemporary law-making process.

Summary of the Proceedings of the ... Annual Conference

Emphasis is placed on the extent of the U.N.'s jurisdiction and its role in preventing aggression. Includes criticisms of the U.N. charter.

Armed Conflict and Displacement

This book takes an inductive approach to the question of whether there is a hierarchy in international law, with human rights obligations trumping other duties. It assesses the extent to which such a hierarchy can be said to exist through an analysis of the case law of national courts. Each chapter of the book examines domestic case law on an issue where human rights obligations conflict with another international law requirement, to see whether national courts gave precedence to human rights. If this is shown to be the case, it would lend support to the argument that the international legal order is moving toward a vertical legal system, with human rights at its apex. In resolving conflicts between human rights obligations and other areas of international law, the practice of judicial bodies, both domestic and international, is crucial. Judicial practice indicates that norm conflicts typically manifest themselves in situations where human rights obligations are at odds with other international obligations, such as immunities; extradition and refoulement; trade and investment law; and environmental protection. This book sets out and analyses the relevant case law in all of these areas.

Hierarchy in International Law: The Place of Human Rights

The idea of an International Criminal Court has captured the international legal imagination for over a century. In 1998 it became a reality with the adoption of the Rome Statute. This book critically examines the fundamental legal and policy issues involved in the establishment and functioning of the Permanent International Criminal Court. Detailed consideration is given to the history of war crimes trials and their place in the system of international law, the legal and political significance of a permanent ICC, the legality and legitimacy of war crimes trials, the tensions and conflicts involved in negotiating the ICC Statute, the general principles of legality, the scope of defences, evidential dilemmas, the perspective of victims, the nature and scope of the offences within the ICC's jurisdiction – aggression, genocide, war crimes, crimes against humanity, questions of admissibility and theories of jurisdiction, the principle of complementarity, national implementation of the Statute in a range of jurisdictions, and national and international responses to the ICC. The expert contributors are drawn from a range of national jurisdictions – UK, Sweden, Canada, and Australia. The book blends detailed legal analysis with practical and policy perspectives and offers an authoritative complement to the extensive commentaries on the ICC Statute.

Proceedings of the American Society of International Law at Its ... Annual Meeting

The International Court of Justice is the principal judicial organ of the United Nations and plays a central role in the settlement of disputes and the development of international law. This commentary analyses the Statute of the Court and the related provisions of the UN charter and the Court's Rules of Procedure.

Proceedings of the American Society of International Law at Its Annual Meeting

This publication includes the proceedings of the 19th and 20th conferences of the International Law Association, which focused on a wide range of legal issues including international dispute resolution, human rights, and the role of international organizations in the promotion of peace and justice. It is an essential resource for legal scholars and practitioners interested in international law and policy. This work has been selected by scholars as being culturally important, and is part of the knowledge base of civilization as we know it. This work is in the "public domain in the United States of America, and possibly other nations. Within the United States, you may freely copy and distribute this work, as no entity (individual or corporate) has a copyright on the body of the work. Scholars believe, and we concur, that this work is important enough to be preserved, reproduced, and made generally available to the public. We appreciate your support of the preservation process, and thank you for being an important part of keeping this knowledge alive and relevant.

The Permanent International Criminal Court

This commemorative title includes ten chapters that cover, inter alia, the history of the International Court of Justice, the actors that appear before the Court, the core principles guiding its functioning, the various stages in the evolution of a case, as well as the institution's contribution to the development of international law.

The Statute of the International Court of Justice

Papers presented at the Institute's annual session.

Report of the ... Conference, Volumes 19-20

The debate over the nature and future of the United Nations began before its inception in 1945, and is likely to continue far into its second half-century. The purpose of this collection is to examine something generally ignored in the debate, even in the professional literature: what the United Nations actually does. The volume consists of original, authoritative, critical analyses of a sampling of key UN activities. In addition to their credentials in their own specialties, most contributors have extensive UN experience as staff members, delegates or consultants. Most are international lawyers and the others have a wide variety of backgrounds. They come from 12 countries. Each chapter stands on its own as a significant contribution to our understanding of both the subject and the quiet, undramatic but vital worldwide work of the United Nations. Students, scholars, and other researchers involved with the United Nations and other intergovernmental organizations will find this work of particular interest.

Proceedings of the Annual Meeting

This is the eighth volume of the "Hague Yearbook of International" "Law," which succeeds the Yearbook of the Association of Attenders and Alumni of the Hague Academy of International Law. The title "Hague Yearbook of International Law" reflects the close ties which have always existed between the AAA and the City of The Hague with its international law institutions, and indicates the Editors' intention to devote attention to developments taking place in those international law institutions, viz. the International Court of Justice, the Permanent Court of Arbitration, the Iran-United States Claims Tribunal and the Hague Conference on Private International Law. This volume contains in-depth articles on these developments (in English and French) and summaries of (aspects of) decisions rendered by the International Court of Justice, the Permanent Court of Arbitration and the Iran-United States Claims Tribunal.

The International Court of Justice: 75 Years in the Service of Peace and Justice

Proceedings of the third Joint Conference held in The Hague, The Netherlands, July 13-15, 1995.

United Nations Decade of International Law

Following a request by the International Law Commission, the General Assembly, in resolution 987 (X) of 3 December 1955, requested the Secretary-General to arrange for publishing an annual publication entitled Yearbook of the International Law Commission, containing the principal documents and summary records relating to each ILC session. It has since been published annually in two volumes in respect of each session.

The United Nations at Work

This volume contains the report of the International Law Commission on the work of its fifty-fourth session (29 April - 7 June and 22 July – 16 August 2002). The issues discussed at that session included: reservations to treaties, diplomatic protection, unilateral acts of States, state responsibility, and international liability for injurious consequences arising out of acts not prohibited by international law, and responsibilities of international organizations.

Hague yearbook of international law. Vol. 8 (1995)

This book continues the series Select Proceedings of the European Society of International Law, containing the proceedings of the Third Biennial Conference organised by ESIL and the Max Planck Institute for Comparative Public Law and International Law in 2008. The conference was entitled 'International Law in a Heterogeneous World', reflecting an idea which is central to the ESIL philosophy. Heterogeneity is considered one of the pillars upon which Europe's contribution to international law is built and the subject was considered in a number of panels, including such diverse topics as migration, the history of international law, the rules on warfare and international environmental law.

The Theory And Practice Of International Law

This unique volume examines the opportunities for, and initiates work in, interdisciplinary research between the fields of international law and international relations; disciplines that have engaged little with one another since the Second World War. Written by leading experts in the fields of international law and international relations, it argues that such interdisciplinary research is central to the creation of

a knowledge base among IR scholars and lawyers for the effective analysis and governance of macro and micro phenomena. International law is at the heart of international relations, but due to challenges of codification and enforceability, its apparent impact has been predominantly limited to commercial and civil arrangements. International lawyers have been saying for years that 'law matters' in international affairs and now current events are proving them right. International Law and International Relations makes a powerful contribution to the theory and practice of global security by initiating a research agenda, building an empirical base and offering a multidisciplinary approach that provides concrete answers to real-world problems of governance. This book will be of great interest to all students of international law, international relations and governance.

International Law and International Relations

Provides an in-depth study of the theory, history, practice, and interpretation of customary international law.

International Law in Theory and Practice

International Legal Positivism in a Post-Modern World provides fresh perspectives on one of the most important and most controversial families of theoretical approaches to the study and practice of international law. The contributors include leading experts on international legal theory who analyse and criticise positivism as a conceptual framework for international law, explore its relationships with other approaches and apply it to current problems of international law. Is legal positivism relevant to the theory and practice of international law today? Have other answers to the problems of international law and the critique of positivism undermined the positivist project and its narratives? Do modern forms of positivism, inspired largely by the theoretically sophisticated jurisprudential concepts associated with Hans Kelsen and H. L. A. Hart, remain of any relevance for the international lawyer in this 'post-modern' age? The authors provide a wide variety of views and a stimulating debate about this family of approaches.

The Theory, Practice and Interpretation of Customary International Law

This book adopts a 'trans-civilizational' perspective on the history and development of current West-centric international law.

International Legal Positivism in a Post-Modern World

Beyond Human Rights, previously published in German and now available in English, is a historical and doctrinal study about the legal status of individuals in international law.

Reexamining Customary International Law

This updated and revised second edition, with contributions from renowned experts, provides a comprehensive scholarly framework for analyzing the theory and history of international law. Featuring an array of legal and interdisciplinary analyses, it focuses on those theories and developments that illuminate the central and timeless basic concepts and categories of the international legal system, highlighting the interdependency of various aspects of theory and history and demonstrating the connections between theory and practice.

International Law in a Transcivilizational World

Clearly and accessibly written, this new text provides a valuable resource for undergraduate and postgraduate students of international law and covers subjects including the history, theories and sources of international law, as well as current areas of interest such as international criminal law.

Beyond Human Rights

This major extension of existing scholarship on the fragmentation of international law utilises the concept of 'regimes' from international law and international relations literature to define functional areas such as human rights or trade law. Responding to existing approaches, which focus on the resolution of conflicting norms between regimes, it contains a variety of critical, sociological and doctrinal perspectives on regime interaction. Leading international law scholars and practitioners reflect on how, in situations of diversity and concurrent activity, such interaction shapes and con-

trols knowledge and norms in often hegemonic ways. The contributors draw on topical examples of interacting regimes, including climate, trade and investment regimes, to argue for new methods of regime interaction. Together, the essays combine approaches from international, transnational and comparative constitutional law to provide important insights into an issue that continues to challenge international legal theory and practice.

Fragmentation of International Law

A collection of essays on the various aspects of the legal sources of international law, including theories of the origin of international law, explanation of its binding force, normative hierarchies and the relation of international law and politics.

Research Handbook on the Theory and History of International Law

Concepts shape how we understand and participate in international legal affairs. They are an important site for order, struggle and change. This comprehensive and authoritative volume introduces a large number of concepts that have shaped, at various points in history, international legal practice and thought; intimates at how the many projects of international law have grappled with, and influenced, the world through certain concepts; and introduces new concepts into the discipline.

International Law

This collection of self-reflective essays explores the relations between international legal professions and their respective understandings of international law.

Regime Interaction in International Law

In *International Law and Transition to Peace in Colombia*, César Rojas-Orozco analyses the role of international law in transition from armed conflict to peace, by using the analytical framework of *jus post bellum* and Colombia as a case study. While contemporary attention to *jus post bellum* has focused on its theoretical development and regarding international warfare, this book is the first work to comprehensively assess the concept in practice and in the context of a non-international armed conflict. Discussing the creative formulas adopted in Colombia to conciliate international legal requirements and the practical needs of peace, the book offers concrete elements to understand the concept of *jus post bellum* as a framework to guide other transitions around the world.

Sources of International Law

The Law and Practice of the United Nations examines the law of the United Nations through an analysis of the Organization's practice from its inception until the present.

Concepts for International Law

Customary International Humanitarian Law, Volume I: Rules is a comprehensive analysis of the customary rules of international humanitarian law applicable in international and non-international armed conflicts. In the absence of ratifications of important treaties in this area, this is clearly a publication of major importance, carried out at the express request of the international community. In so doing, this study identifies the common core of international humanitarian law binding on all parties to all armed conflicts. Comment Don:RWI.

International Law as a Profession

(unseen), \$12.95. Donnelly explicates and defends an account of human rights as universal rights. Considering the competing claims of the universality, particularity, and relativity of human rights, he argues that the historical contingency and particularity of human rights is completely compatible with a conception of human rights as universal moral rights, and thus does not require the acceptance of claims of cultural relativism. The book moves between theoretical argument and historical practice. Rigorous and tightly-reasoned, material and perspectives from many disciplines are incorporated. Paper edition Annotation copyrighted by Book News, Inc., Portland, OR

International Law and Transition to Peace in Colombia

Through a combination of theoretical and empirical approaches, this book explores the role of international environmental law in protecting and conserving plants. Underpinning every ecosystem on the planet, plants provide the most basic requirements: food, shelter and clear air. Yet the world's plants are in trouble; a fifth of all plant species are at risk of extinction, with thousands more in perpetual decline. In a unique study of international environmental law, this book provides a comprehensive overview of the challenges and restrictions associated with protecting and conserving plants. Through analysing the relationship between conservation law and conservation practice, the book debates whether the two work symbiotically, or if the law poses more of a hindrance than a help. Further discussion of the law's response to some of the major threats facing plants, notably climate change, international trade and invasive species, grounds the book in conservation literature. Using case studies on key plant biomes to highlight the strengths and weaknesses of the law in practice, the book also includes previously unpublished results of an original empirical study into the correlations between the IUCN Red List and lists of endangered/protected species in international instruments. To conclude, the book looks to the future, considering broader reforms to the law to support the work of conservation practitioners and reshape humanity's relationships with nature. The book will be of interest to scholars and students working in the field of international environmental law and those interested more broadly in conservation and ecological governance frameworks.

The Law and Practice of the United Nations

Part 4 - Trade..

Customary International Humanitarian Law

Histories -- Approaches -- Regimes and doctrines -- Debates

Universal Human Rights in Theory and Practice

A perfect introduction to climate change law, this textbook offers students and scholars an overview of the international law governing this fundamental issue. It demonstrates how to interpret the language used in the applicable instruments and conventions, and sets climate change law in its broader international legal context.

International Conservation Law

Using a multi-disciplinary approach, this volume shows how international law shapes behavior.

International Law and Development

Interest in international law has increased greatly over the past decade, largely because of its central place in discussions such as the Iraq War and Guantanamo, the World Trade Organisation, the anti-capitalist movement, the Kyoto Convention on climate change, and the apparent failure of the international system to deal with the situations in Palestine and Darfur, and the plights of refugees and illegal immigrants around the world. This Very Short Introduction explains what international law is, what its role in international society is, and how it operates. Vaughan Lowe examines what international law can and cannot do and what it is and what it isn't doing to make the world a better place. Focussing on the problems the world faces, Lowe uses terrorism, environmental change, poverty, and international violence to demonstrate the theories and practice of international law, and how the principles can be used for international co-operation.

The Oxford Handbook of the Theory of International Law

Advances our understanding of global and international relations through a ground-breaking philosophical analysis of social practices indebted to Oakeshott, Wittgenstein and Hegel.

International Climate Change Law

This text offers an original and scholarly introduction to a number of key topics which lie at the heart of modern international law. Based upon the author's highly acclaimed Hague Academy lectures, the book introduces the student to a series of pressing problems which help reveal the complex relationship between legal norms and policy objectives which define contemporary international law.

International Law as Behavior

Provides a framework for understanding how organizations are set up and the logic behind international organizations law.

International Law: A Very Short Introduction

The law of international responsibility is one of international law's core foundational topics. Written by international experts, this book provides an overview of the modern law of international responsibility, both as it applies to states and to international organizations, with a focus on the ILC's work.

Practice Theory and International Relations

This title addresses the current international law debates and transcends them. Responding to influential scholarly statements on international law, the author presents a new framework that decision-makers should consider when they confront an international problem implicating the often-competing policies and interests of their own communities & global order. Instead of advocating for or against international law as legitimate or binding, Cheng acknowledges its shortcomings while presenting a practical means of deciding whether compliance in a given circumstance is beneficial, moral, or necessary.

Problems and Process

The right of States to use force extraterritorially is conditioned by requirements of necessity and proportionality. This book provides a much-needed detailed analysis of those requirements, and a coherent and up-to-date account of the applicable contemporary international law in this field.

An Introduction to International Organizations Law

Over the past decades international affairs have been increasingly legalized. International law has dramatically expanded into new fields and taken on new challenges. Despite this development, there has been little in-depth scholarship on what impact these changes have had on the field of international legal theory, how it is taught, and where it is going. This volume investigates the major developments in the field and explores the core assumptions and concepts, analytical tools, and key challenges associated with different approaches. An outstanding team of legal academics provides an accessible overview of competing theoretical movements, and a more in-depth understanding of the strengths, preoccupations, insights, and limits of those schools of thought. The contributions provide an authoritative account of current thinking about the theoretical foundations of contemporary international law and will serve as an indispensable resource for students, scholars, and practitioners.

The Law of International Responsibility

Published under the auspices of the American Society of International Law. We would highly recommend this book for purchase. It is a valuable addition to any international law library. Int'l J. of Legal Information, Vol. 27, No.1 This is the second volume to grow out of the cooperative research sponsored by the ASIL, the Canadian Council on International Law, and the Japan Association of International Law. With emphasis on recent developments in human rights law, international trade and investment, arms control, and other emerging areas of law, the authors concentrate on dispute resolution, compliance, and enforcement of the law. Published under the Transnational Publishers imprint.

When International Law Works

The International Criminal Court has significantly grown in importance and impact over the decade of its existence. This book assesses its impact, providing a comprehensive overview of its practice. It shows how the court has contributed to major developments in international criminal law, and identifies the ways in which it is in need of reform.

Necessity and Proportionality and the Right of Self-Defence in International Law

Serving as a single volume introduction to the field as a whole, this ninth edition of Brownlie's Principles of International Law seeks to present international law as a system that is based on, and helps structure, relations among states and other entities at the international level.

International Legal Theory

Withdrawal from Multilateral Treaties is the first comprehensive and systematic legal analysis of withdrawal. It examines the political and legal framework around treaty making to explain how withdrawal evolved over time and suggests ways to improve conditions for orderly withdrawal.

Trilateral Perspectives on International Legal Issues: From Theory Into Practice

This timely Handbook contains a wide-ranging overview of the diverse research methods used within international law. Providing an insightful examination of how international legal knowledge is analysed and adopted, this Handbook offers the reader a deeper understanding on the role and place of research methods in international legal theory, reasoning and practice.

The Law and Practice of the International Criminal Court

The current system of international law is experiencing profound transformations. Indeed, the simultaneous processes of globalization combined with the disintegration of international systems of governance and law-making pose complex challenges for legal scholarship. The doctrinal response to these challenges has been theorized within two seemingly contradictory discourses in international law: fragmentation and constitutionalisation. This book takes an innovative approach to international law, viewing the processes of the fragmentation and constitutionalisation as being profoundly interconnected and reflective of each other. It brings together a select group of contributors, including both established and emerging scholars and practitioners, in order to explore the ways in which the problems of fragmentation and constitutionalisation are viscerally linked one to the other and thus mutually conditioning and stimulating. The book considers the theory and practice of international law looking at the two phenomena in relation to the various fields of international law such as international criminal law, cultural heritage law and international environmental law.

Brownlie's Principles of Public International Law

This book explores the notions of global public goods, global commons, and fundamental values as conceptual tools for the protection of the general interests of the international community. It explores how states and other actors have used international law to protect general interests, and outlines significant challenges still to be addressed.
