Genetic Ancestry and the People of the British Isles - Genetic Ancestry and the People of the British Isles by Oxford University Museum of Natural History 114,550 views 5 years ago 5 minutes, 11 seconds - The People of the British Isles study at the University of Oxford produced a map of the fine-scale genetic structure of Britain.

It was the first map of its kind anywhere in the world.

The same study also revealed remarkable genetic evidence that sheds light on the nature of migrations from continental Europe into the UK

It is striking just how closely the genetic clusters are associated with geographical regions of Britain
These groups also correspond closely to geography
Each UK cluster has a characteristic signature showing the proportion of its ancestry shared most closely with each of the European groups
Take a look at Norway...

Vikings from Norway settled in Orkney and around Northwest Scotland from the late 8th century.
Evidence of this movement of Norse Vikings into northern Britain remains in British genomes today.
The ancestry of the genetic cluster in Orkney shows the most substantial
These patterns reflect Norse Viking migrations into the region.

Now let's look at Germany...

This genetic group covers an area closely corresponding to Old Saxony, home of the Saxons.
The Saxons invaded Britain in the 5th century and many settled here.
The characteristic genetic signatures of the UK groups match this Saxon invasion remarkably closely
The genomes of all 17 clusters show significant shared ancestry with these European groups
This suggests that the shared ancestry is old, and that DNA from these European regions spread throughout Britain a long time ago

Wales shows more ancestry reflective of these earliest settlers to Britain than England
Linguistic, historical and archaeological evidence had led some scholars to believe the Saxons replaced the majority of the population in England
Saxon DNA makes up between 10% and 40% of the genetic signatures of these English groups
