This book is open access under a CC BY-NC 2.5 license. This book describes the extensive contributions made toward the advancement of human assessment by scientists from one of the world's leading research institutions, Educational Testing Service. The book's four major sections detail research and development in measurement and statistics, education policy analysis and evaluation, scientific psychology, and validity. Many of the developments presented have become de-facto standards in educational and psychological measurement, including in item response theory (IRT), linking and equating, differential item functioning (DIF), and educational surveys like the National Assessment of Educational Progress (NAEP), the Programme of international Student Assessment (PISA), the Progress of International Reading Literacy Study (PIRLS) and the Trends in Mathematics and Science Study (TIMSS). In addition to its comprehensive coverage of contributions to the theory and methodology of educational and psychological measurement and statistics, the book gives significant attention to ETS work in cognitive, personality, developmental, and social psychology, and to education policy analysis and program evaluation. The chapter authors are long-standing experts who provide broad coverage and thoughtful insights that build upon decades of experience in research and best practices for measurement, evaluation, scientific psychology, and education policy analysis. Opening with a chapter on the genesis of ETS and closing with a synthesis of the enormously diverse set of contributions made over its 70-year history, the book is a useful resource for all interested in the improvement of human assessment.

This is an innovative yet practical resource book for teachers, focusing on the classroom and covering vital skills for primary and secondary teachers. The book is strongly influenced by the findings of numerous research projects during which hundreds of teachers were observed at work. This book addresses both formal and informal ways of assessing children's work and progress. Pupils' learning is often neglected in the debate, so this book puts what children actually learn right at its centre. Divided into six units, Ted Wragg addresses important topics such as: * principles and purposes of assessment * written, oral and practical evaluation * self-assessment the 'whole school' approach * staff development and appraisal. The inclusion of practical activities, discussion topics, photographs, cartoons and case examples makes this a very user-friendly book for both trainee and experienced teachers in primary schools.
