derivatives and gradient vectors. My Patreon account is at <https://www.patreon.com/EugeneK>. Suppose that we pick one value for X , and we keep X at this one value as we change the value for Y . At each point, the change in z divided by the change in Y is given by the slope of this line. Again, at each point, the change in z divided by the change Y is given by the slope of this line. The change in z divided by the change in Y is what we refer to as the partial derivative of Z with respect to Y .

Every point on the graph has a value for the partial derivative of Z with respect to Y .

Here, green indicates a positive value, and red indicates a negative value.

Every point on the graph also has a value for the partial derivative of Z with respect to X .
