Diccionario de términos de arte y elementos de arqueología y numismática

EL DICCIONARIO DE TÉRMINOS DE ARTE Y ELEMENTOS DE ARQUEOLOGÍA, HERÁLDICA Y NUMISMÁTICA recoge no sólo el vocabulario específico de la escultura, la pintura, la arquitectura y las artes decorativas, sino también los términos propios de una amplia gama de ciencias auxiliares. En esta nueva edición de una obra ya clásica, que mejora su práctico sistema de referencias y conserva el utilísimo apéndice de láminas que proporciona imagen a numerosos términos, Guillermo Fatás y Gonzalo M. Borrás, además de proceder a una revisión exhaustiva de la precedente, han incorporado adiciones sobre arte precolombino y setenta entradas nuevas relativas al arte japonés.

European studies of the Bell Beaker phenomenon have concentrated on burial and artifacts that constitute its the most visible aspects. This volume concentrates on the domestic sphere - assemblage composition, domestic structures (how they differ, if at all, from previous types, legacies), and provides the first pan-European synthesis of its kind. It is a Europe-wide survey and analysis of Bell Beaker settlement structures; this is particularly important as we cannot understand the Bell Beaker phenomenon by analyzing graves alone. Neither should we view Bell Beakers in isolation but must consider

the effect that they had on already existing Late Neolithic cultures in the areas in which they appear. This volume is therefore intended to view the settlement aspect of Bell Beakers in context throughout Europe. It is the text book for Chalcolithic settlements and society. Contributors to the 19 papers belong to Europe-wide affiliation of experts specializing in Bell Beakers and the Chalcolithic (Archeologie et Gobelets) which addresses common pan-European issues surrounding the appearance and spread of Bell Beakers. This book summarizes that data from the UK and many of the continental European countries; an increasingly important element of Beaker studies following recent isotopic and DNA evidence showing that the phenomenon was a result of human migration and not that of cultural ideas, trade and ideology. Each chapter deals with a defined region or country and is fully illustrated, including a corpus of Beaker houses and comparing them with Late Neolithic domestic structures where they are known to exist. The following themes will be addressed: 1. Regional syntheses in the UK and in Europe 2. What native cultures existed before the arrival of Bell Beakers? 3. What domestic ceramics were being used before the arrival of Bell Beakers? 4. What stone and flint types were in use? 5. What did pre-Bell Beaker houses look like? What size were they? 6. What (if any) changes to 1-4 above resulted after the appearance of Bell Beakers?

This 1976 text is a pioneering study in the applications to archaeology of modern statistical and quantitative techniques. The authors show how these techniques, when sensitively employed, can dramatically extend and refine the information presented in distribution maps and other analyses of spatial relationships. Techniques of interpretation 'by inspection' can now be made more powerful and rigorous; at the same time interest has turned from the examination of such sites and artefacts as 'things' to the spatial relationships between such things, their relationships to one another and to landscape features, soils and other resources. This book was the first to apply the available techniques systematically to the special problems and interests of archaeologists. It also demonstrates to geographers and other social scientists who may be familiar with analogous applications in their own fields the exciting interdisciplinary developments this facilitates, for example in studies of exchange networks, trade and settlement patterns, and cultural history.

Dictionary of Art and Archaeology Terms with Elements of Numismatics

This is the first book in English about the earliest historical civilization in the western Mediterranean, known as "Tartessos". It combines the expertise of its two authors in archaeology, philology, and cultural history to present a comprehensive, coherent, theoretically up-to-date, and informative overview of the discovery, sources, and debates surrounding this puzzling culture of ancient Iberia and its complex hybrid identity vis-à-vis the western Phoenicians.

Every generation has created its own interpretation of Stonehenge, but rarely do these relate to the physical realities of the monument. Rodney Castleden begins with those elements which made possible the building of this vast stone circle: the site, the materials and the society that undertook the enormous task of transporting and raising the great vertical stones, then capping them, all to a carefully contrived plan. What emerges from this detailed examination is a much fuller sense of Stonehenge, both in relation to all the similar sites close by, and in terms of the uses to which it was put. Castleden suggests that there is no one 'meaning' or 'purpose' for Stonehenge, that from its very beginning it has filled a variety of needs. The Romans saw it as a centre of resistance; the antiquaries who 'rediscovered' it in the seventeenth century saw a long line of continuity leading back into the nation's past. The archaeologists see it as a subject for rational, scientific investigation; The National Trust and English Heritage view it as an unfailing magnet for visitors; UNESCO has declared it a World Heritage Site, the cultural property of the whole of humanity. Lost to view amid competing interests over the millennia are the uses it has served for those who live within its penumbra, for whom Stonehenge has never been 'lost' or 'rediscovered'. It exists in local myth and legend, stretching back beyond history.

Dot Grid Notebook

This interdisciplinary book examines archaeology's engagement with semiotics, from its early structuralist beginnings to its more recent Peircian encounters. It represents the first sustained engagement with Peircian semiotics in archaeology, as well as the first discussion of how pragmatic anthropology articulates with anthropological archaeology. Its central thesis is that archaeology is a distinctive kind of semiotic enterprise; one devoted to giving meaning to the past in the present through the study of materiality. It compliments standard studies of linguistics and reformulates contemporary theories of material culture.

Bell Beaker Settlement of Europe

Recognition of the great importance in Renaissance culture of the versatile and complex form of the emblem is increasingly widespread. This series aims to satisfy the needs of those who require access to texts in an edition as close to the original as possible.

Spatial Analysis in Archaeology

The principal aims of *Urbanisation in Roman Spain and Portugal: Civitates Hispaniae in the Early Empire* are to provide a comprehensive reconstruction of the urban systems of the Iberian Peninsula during the Early Empire and to explain why these systems looked the way they did. While some chapters focus on settlements that were cities or towns from a juridical point of view, the implications of using a purely functional definition of towns are also explored. Key themes include continuities and discontinuities between pre-Roman and Roman settlement patterns, the geographical distribution of cities belonging to various size brackets, economic relationships between self-governing cities and their territories and the role of cities as nodes in road systems and maritime networks. In addition, it is argued that a considerable number of self-governing communities in Roman Spain and Portugal were poly-centric rather than based on a single urban centre. The volume will be of interest to anyone working on Roman urbanism as well as those interested in the Iberian Peninsula in the Roman period.

Tartessos and the Phoenicians in Iberia

Villa to Village challenges the historical view that hilltop villages in Italy were first founded in the tenth century. Drawing upon recent excavations, the authors show that the makings of the medieval village lie in the demise of the Roman villa in late antiquity. The book describes the lively debate between archaeologists and historians on this issue. It also examines the evidence for the first manorial villages of the Carolingian era and describes how these were transformed into the familiar feudal villages that are characteristic of much of Italy. Useful maps, plans and reconstructions illustrate this useful text.

The Making of Stonehenge

This unique and remarkable work explores the extraordinary creative explosion that happened during the last European Ice Age, between 40,000 and 10,000 years ago, when the very first figurative art was created.

Since September 1997, UNESCO's Analysis and Forecasting Office has been arranging a series of "Twenty-First Century Talks," each of which brings together two or three leading scientists, intellectuals, creators or decision-makers from all parts of the world. The Office also organized the first "Twenty-First Century Dialogues" in September 1998, in which 60 international participants took part in discussions on the general theme of "Will the Twenty-First Century Take Place?" This text represents an anthology of the contributions made to these future-oriented discussions, up to the ninth session of the "Talks" held in June 1999. Topics include population, biotechnologies, pollution, energy, the food supply, culture, pluralism, education, democracy, human rights, women, childhood, work, urban living, globalization, poverty, and human conflicts. Ceroplastics

In this engaging sequel to *Rethinking History*, Keith Jenkins argues for a re-figuration of historical study. At the core of his survey lies the realization that objective and disinterested histories as well as historical 'truth' are unachievable. The past and questions about the nature of history remain interminably open to new and disobedient approaches. Jenkins reassesses conventional history in a bold fashion. His

committed and radical study presents new ways of 'thinking history', a new methodology and philosophy and their impact on historical practice. This volume is written for students and teachers of history, illuminating and changing the core of their discipline.

Archaeological Semiotics

Since the rediscovery of the Canary Islands in the early 14th century, Europeans and Canarians alike have been trying to solve the question of the early colonisation of the islands.

Coleccion de inscripciones y antiguedades de Estremadura, etc

This book traces the beginnings and the first 140 years of the Roman presence in Spain, showing how what began as a purely military commitment developed in addition into a range of civilian activities including taxation, jurisdiction and the founding of both Roman and native settlements. The author uses literary sources, the results of recent and earlier archaeology, numismatics, and epigraphic material to reveal the way in which patterns of administration were created, especially under the direction of the military commanders sent from Rome to the two Spanish provinciae. This is of major importance for understanding the way in which Roman power spread during this period, not only in Spain, but throughout the Mediterranean world.

Illicit Traffic in Cultural Property

Nineteen papers examining varied responses to Romanization, and how this affects our view of the development of the Roman Empire. The traditional view of Romanization is as the triumph of a superior and more advanced culture over primitive communities, brought about by military expansion and resulting in the creation of a uniform political and cultural entity. It is only in the last twenty years that the variety of responses that Romanization elicited among the various ethnic groups, social classes, genders, spheres, and even within the same person in different conjunctures of his or her life, has begun to be appreciated. The aim of this collection of papers is to further understanding of Romanization at a formative stage; early Roman expansion in Italy. There is much evidence for bi-directional negotiation between Italian communities and Rome. Understanding the motivation of the Italian peoples to become part of a new political entity is crucial to knowing how Roman Italy was kept together for more than half a millennium. Seven papers also examine responses to Romanization in other parts of the Empire.

Bibliotheca Numaria

This work, by the greatest living authority on medieval palaeography, offers the most comprehensive and up-to-date account in any language of the history of Latin script. It also contains a detailed account of the role of the book in cultural history from antiquity to the Renaissance, which outlines the history of book illumination. Designed as a textbook, it contains a full and updated bibliography. Because the volume sets the development of Latin script in its cultural context, it also provides an unrivalled introduction to the nature of medieval Latin culture. It will be used extensively in the teaching of latin palaeography, and is unlikely to be superseded.

Emblemata

An examination of the construction of contestation over human remains from a sociological perspective, this work advances an emerging area of academic research, setting the terms of debate, synthesizing disparate ideas, & making sense of a broader cultural focus on dead bodies in the contemporary period.

Urbanisation in Roman Spain and Portugal

Synchrotron radiation as a spectroscopic research tool has undergone a most interesting and astonishing historical development and has now come to the stage of an exciting boom. The machines which produce synchrotron radiation were built and developed exclusively for other purposes in the past, namely high-energy physics. At the same time, however, they involuntarily became better and better light sources for the spectral range from the visible to the hard x-ray region. Now we are at the point that the first few storage rings have gone into operation as machines dedicated to synchrotron radiation and several more are in the stage of construction and planning. All this was brought about by the successful research performed during the past fifteen years in which several groups all over the world have participated at different accelerator centers mostly symbiotic with high-energy physics. As it happens with a young and rapidly developing field, the number of reviews and monographs is still

minute. The objective of this book is to fill an apparent gap and to provide a sound basis for those who are interested in synchrotron radiation and its applications.

Villa to Village

This book provides the first in-depth exploration of video games as history. Chapman puts forth five basic categories of analysis for understanding historical video games: simulation and epistemology, time, space, narrative, and affordance. Through these methods of analysis he explores what these games uniquely offer as a new form of history and how they produce representations of the past. By taking an inter-disciplinary and accessible approach the book provides a specific and firm first foundation upon which to build further examination of the potential of video games as a historical form.
