differentiating between systolic and diastolic murmurs

increase your preload

decreased venous return

stand for hypertrophic cardiomyopathy

differentiating between left and right sided murmurs

be brief on the clinical manifestations

seen at the end stages of aortic stenosis
move on to aortic regurgitation
starts at the maximal intensity
widen pulse pressure
look at the uvula
move on to mitral regurgitation
develop atrial fibrillation
moving on to the physical exam the classic murmur for mitral
moving on to mitral
develop afib due to the increased pressure increased size of the atrium
develop this cutaneous vasodilation
move on to mitral valve prolapse
increase preload like raising the legs
cause the murmur duration to increase
heard at the left upper sternal border
stands for pulmonary regurgitation
found along with either tricuspid regurge or other valvular lesions
see a normal tricuspid valve
mitral valve prolapse
