

At The Hand Of Her Father

[#father daughter relationship](#) [#paternal influence](#) [#family dynamics](#) [#parental authority](#) [#daughters upbringing](#)

Explore the profound impact of a father's influence on his daughter's life. This analysis delves into the intricate father-daughter relationship, examining themes of paternal guidance, control, and the shaping of a daughter's destiny within family dynamics and societal expectations.

At the Hand of her Father

Blake Harton Junior has it all... With good looks, brains and charm, at just thirty-three he's a partner in his grandfather's prestigious law firm with an enviable success rate for winning even the most challenging criminal law cases. Then he agrees to represent Ian Johnson, a man accused of murdering his child. Natalie Johnson is the mother of the little girl who was murdered by her father. A bitter custody battle has tipped her ex-husband over the edge. Overwrought with the knowledge she couldn't keep her baby safe, Natalie takes comfort in the criminal charges laid against her ex. The police assure her he'll be put away for life. It's small recompense for the loss of her daughter, but it's something... Then she discovers her ex is being represented by none other than Blake Harton Junior and her world is turned upside down once again. Harton has a reputation for being a ruthless lawyer who will stop at nothing to win and he has the success record to prove it. When Natalie comes face to face with Blake Harton Junior, she's taken aback by his good humor and charm, not to mention his looks. If they'd met under different circumstances, she might even find him attractive... But there's no hiding the fact he's representing her murderous husband and the charismatic lawyer intends to do everything in his power to set her ex free... How can she fall for a man who thinks it's acceptable for a child murderer to go unpunished?

My Father's Hand, and Other Stories and Allegories for the Young

By turns heart-tugging and hilarious, Myron Uhlberg's memoir tells the story of growing up as the hearing son of deaf parents—and his life in a world that he found unaccountably beautiful, even as he longed to escape it. "Does sound have rhythm?" my father asked. "Does it rise and fall like the ocean? Does it come and go like the wind?" Such were the kinds of questions that Myron Uhlberg's deaf father asked him from earliest childhood, in his eternal quest to decipher, and to understand, the elusive nature of sound. Quite a challenge for a young boy, and one of many he would face. Uhlberg's first language was American Sign Language, the first sign he learned: "I love you." But his second language was spoken English—and no sooner did he learn it than he was called upon to act as his father's ears and mouth in the stores and streets of the neighborhood beyond their silent apartment in Brooklyn. Resentful as he sometimes was of the heavy burdens heaped on his small shoulders, he nonetheless adored his parents, who passed on to him their own passionate engagement with life. These two

remarkable people married and had children at the absolute bottom of the Great Depression—an expression of extraordinary optimism, and typical of the joy and resilience they were able to summon at even the darkest of times. From the beaches of Coney Island to Ebbets Field, where he watches his father's hero Jackie Robinson play ball, from the branch library above the local Chinese restaurant where the odor of chow mein rose from the pages of the books he devoured to the hospital ward where he visits his polio-afflicted friend, this is a memoir filled with stories about growing up not just as the child of two deaf people but as a book-loving, mischief-making, tree-climbing kid during the remarkably eventful period that spanned the Depression, the War, and the early fifties. From the Hardcover edition.

Hands of My Father

Chief Justice Anthea of Orrin barely survived a demon trap meant to corrupt her very spirit. While she's still recovering, the queen commands her to head a diplomatic mission to Diné. Anthea would love to see her birth father again, but can she deal with his condemnation for succumbing to the demons' influence? Magic and mayhem have never been this unsure. Or this political.

A Hand of Father

In the spiritual life, we need a central idea: something so basic and comprehensive that it encompasses everything else. According to Carmelite Father Wilfrid Stinissen, surrender to God, abandonment to the One who loves us completely, is that central reality. The life of Jesus shows us the centrality of abandonment, for it is truly the beginning and the end of his mission on earth. In this simple but profound book, Father Stinissen distinguishes three degrees or stages in abandonment. The first stage consists of accepting and assenting to God's will as it manifests itself in all circumstances of life. The second is actively doing God's will at every moment of one's life. In the third stage, abandonment to God is so complete that one has become a tool in God's hands. At this stage it is no longer I who do God's will, but God who accomplishes his will through me.

Shakespeariana

A man working in his garden finds a delicate worm, a beetle in shining armor, and a leaf-green mantis and shares these treasures with his young daughter. "Lovely double-page, impressionistic oil paintings...provide a picturesque setting for this simple, straightforward description of a special parent/child outing."--School Library Journal.

Into Your Hands, Father

4 complete novels. The Elves of the Reaches returned from exile, bringing grave news. War came to the Kingdoms, and many perished in the turmoil and unrest. An attempt was made to kidnap a princess and assassinate a king. Now, from the ancient past a dark power returns. Reading order for the Ruin Mist books: Kingdoms and the Elves of the Reaches #1, 2, 3, 4 In the Service of Dragons #1, 2, 3, 4 The Dragon, the Wizard & the Great Door A Legacy of Dragons Breath of Fire Living Fire A Daughter of Kings #1, 2, 3, 4

My Father's Hands

Tess Carey was a young attorney betrayed by the legal system she love. Her move to New Orleans was her attempt to let go of bitterness, the memory of a lost love and reconnect with life. In "N'awlin's" her life was interwoven with corruption, heartache, faith, power, justice and love

Complete In the Service of Dragons: The Complete Series

In this poignant, evocative novel, bestselling author Holly Chamberlin sweeps you into the picturesque town of Ogunquit, Maine, where a family in flux explores their ties to a beautiful beach house, and to each other. Some houses have a personality of their own. Larchmere is that kind of place--a splendid, sprawling home with breathtaking views that open to briny Atlantic air and seabirds' calls. It's the place where Tilda McQueen O'Connell grew up and now vacations each year, and where she and her three siblings--Adam, Hannah, and Craig--have gathered to commemorate the tenth anniversary of their mother's passing. But instead of the bittersweet but relaxing reunion Tilda expected, she finds chaos. Her father's plan to marry a younger woman has thrown the fate of the beach house into uncertainty. For Tilda, the stakes seem the highest. Alone and vulnerable two years after her husband's death, she sees Larchmere as not just a cherished part of her history, but her eventual refuge from the world. Faced

with losing that legacy, Tilda must embrace an unknown future. And all the McQueens must reconcile their shared, sometimes painful past--and learn how to love one another even when it means forging a life apart. . . "A dramatic and moving portrait of several generations of a family and each person's place within it." --Booklist "An enjoyable summer read, but it's more. It is a novel for all seasons that adds to the enduring excitement of Ogunquit." --The Maine Sunday Telegram

The Book of Common Prayer, and Administration of the Sacraments

Our Seas of Fear and Love is a romance-family saga set primarily in Maine but also in Europe, Boston, and the Southwest. Calm and stormy seas are emblematic of the characters, their influence upon one another, and the conflicts and love expressed among the four main characters – Brigit, Deirdre, Gregory and Étienne Moreau, a man who searches out art treasures to sell to museums. Étienne takes as his partner Deirdre, a dark haired, vivacious beauty he meets during World War II when she was an OSS member and he was head of a Maquis group. Brigit, an extremely attractive red-haired woman and nurse cares for Gregory wounded during the war and who becomes a well-known medical researcher. Gregory and Brigit have fallen in love and plan their marriage. Deirdre then sets her sight on Gregory, ignoring her lover and partner Étienne, and a conflict occurs between the two women. In the end, the effects of love triumph in contrast to vainness that damages self and others as the seas of fear and love engulf all. Reviews "In Our Seas of Fear and Love the characters are well developed and believable as they are interwoven into a story that hits the emotional highs and lows of couples through times of adversity. The story reminds us that even people of high moral standards and values can be corrupted through lust and money. This story will draw you in from the first chapter and keep you reading until the last word. You actually feel as if you are living the story which can only happen when the writing is superb like Cohen's." - Bonnie Kaye, M.Ed., Counselor and Author of ManReaders: A Woman's Guide to Dysfunctional Men "This meticulously crafted novel reads like a family saga, spanning about fifty years. The author weaves the warp of individual characters into the woof of both national and global affairs with great clarity. The tangled love relationships are described with candor. Sharply observed and deeply felt, the narrative plays out against the unifying backdrop of the ocean, which with its changing moods serves as a natural metaphor for the tempestuous changes that occur in history and the lives of individuals. A compelling must read." - J. Arthur Faber, Professor of English Emeritus, Wittenberg University About the Author Richard Shain Cohen of Cape Elizabeth, Maine, is originally from Boston. He retired from the University of Maine at Presque Isle after serving as Vice President of Academic Affairs and Professor of English. He holds B.S., M.A., and Ph.D. degrees. He served as editor of the journal Husson Review and was principal participant in a National Endowment for the Arts Grant for "Images of Aroostook" that was exhibited throughout the State of Maine. His own publications include: Healing After Dark: Pioneering Compassionate Medicine at the Boston Evening Clinic (2011), The Forgotten Longfellow: Man in the Shadows (2010), Only God Can Make a Tree, poetry from himself and his brother, Alfred Robert Cohen; and the novels Our Seas of Fear and Love, Monday: End of the Week, Be Still, My Soul, and Petal on a Black Bough. He also wrote chapters for Aroostook: Land of Promise, academic reviews, other articles, and – with the help of a Shell Grant – a monograph on Samuel Richardson that can be found in major library holdings.

N'AWLINS

I regard this book as a duty to honor my grandfather, Andras Lehoczký's memory. My intention is to present the Legend telling how my ancestor witnessed one of the most fundamental turn of the Human history: Genghis Khan's vast Mongol empire's rise and decline, the Muslim world's crisis and beginning of the still ongoing expansion as well as crumbling of the Roman Church's crusade and political superiority. The stage is Central & Eastern European Region and the Near East at the time of the crusades.

Chambers's Journal of Popular Literature, Science and Arts

"The Prophecies of A Father" is a remarkable piece of literary work. The writer, His Excellency Ambassador Eddie M. Turay is very sincere and passionate in the presentation of his facts. The facts relate to the culture, traditions, customs and party politics of his country. The writer's sincerity and passion revolves around the traditional beliefs and faith of his benevolent father in his ancestral spirits, late Paramount Chief Kande Turay of Sanda Chieftdom. He reveals that the late man was an animist who despite neither believed nor practiced Christianity and Islam, yet he gave him the freedom and support to become a practicing Christian. His father was not only liberal towards the two mainstream religions

(Christianity and Islam) but he was a great admirer of the Whiteman's education. That was why he gave him his blessings and support to pursue education for which he will ever remain grateful. Paramount Chieftaincy is one of the oldest and respectable political institutions in this part of the African Continent. The writer has thrown enlightening lights on the way it works in the Sanda Chieftdom, Northern Sierra Leone. One more amazing revelation of the book is the prophecies of the writer's father. As the title of the book, it is befitting because all that his father prophesied have come to pass. His father did prophesise that the writer will dine and drink with Royalties, Prime Ministers and Presidents at home and abroad, which has come to pass. In terms of his country's national politics, he paints the picture of the political culture that existed at the time. It bordered on dysfunctional tendencies, which was disturbing to him as an espouser of democracy and social justice. Thus, educated and trained in the ethics of social justice and fairness, the Ambassador was determined to challenge these vices. Ironically, it was his zealousness to challenge them that made him steal the heart of late President Siaka P. Stevens. The President was impressed, so he convinced him to drop his legal practice and become a politician where he would have the opportunity to fully inculcate and defend the values of fair play and social justice as espoused by democratic ethos, particularly at the grassroots levels of the nation's politics. The writer skilfully draws the contrasts between the "Old" and 'New" APC, and above all, the successful leadership of President Ernest Bai Koroma (Leader of the APC). He registers his unwavering support for the "New" APC Party of which he is a profound member and her admirable leadership. This book is an eye-catching read as well as educative for its sincerity, passion, fun, simple and quality language and buttressed by ideal concepts. HE Ambassador Eddie M. Turay's colleagues in the Diplomatic Service, Foreign Office as well as politicians and educational institutions at home and abroad will find this book a handy resource material on Sierra Leone politics.

The Metropolitan Tabernacle Pulpit

All of a sudden Dr. Nate Williams, a young dynamic cardiologist, finds himself kicked out of his hospital for a month. He had always prided himself that he was not part of the complicated human mess that he treated. Not understanding what has driven him to forego relationships in his arduous journey to excel in medicine, he is set adrift trying to figure out what to do with himself when he meets Angela, a bookstore owner, who diagnoses him with a fiction reading disability and invites him to be a part of her club. Here he meets Tony and Rita restaurant owners, Cindy a third grade teacher and her husband Rick a biologist, Gregg an English professor, his pale wife Samantha and Father Jim. His love affair with Angela and his relationship with the members of her club take him on a journey where he learns what a heart is really for. For the first time he knows love and tears and becomes part of the complicated human mess. And then there is Sandy.

The Sunday Magazine

Sears addresses the joys and problems of parenthood from the often neglected male half of the parenting dyad. He shares with the readers stories about his own experiences as well as those of fathers he's helped over the years about the stereotypes of fatherhood, a changing marriage and baby's development. Complete with photos and illustrations.

The Family Beach House

From the award-winning author John Clanchy comes a collection of five new tales that explore the fascinating - and often fraught - relations between fathers and daughters. It is a wise father, the adage tells us, that knows his own child. But equally, as the stories in Her Fathers Daughter reveal with great power and insight, it is a wise child that knows her own father. An honest man, confronting the unpalatable facts of his step-daughters life, decides he must barter truth for lies to protect the woman he loves. A teenage girl goes in search of the father she hasnt seen since early childhood, only to discover a man startlingly different from the one shes imagined. An older man on the cusp of extinction finds that the one person he needs most is the daughter hes never valued. Love and loss may drive the stories in Her Fathers Daughter, but it is longing a matchless yearning which completes them.

Water Wave Mechanics For Engineers And Scientists

This book is intended as an introduction to classical water wave theory for the college senior or first year graduate student. The material is self-contained; almost all mathematical and engineering concepts are presented or derived in the text, thus making the book accessible to practicing engineers as well. The book commences with a review of fluid mechanics and basic vector concepts. The formulation and solution of the governing boundary value problem for small amplitude waves are developed and the kinematic and pressure fields for short and long waves are explored. The transformation of waves due to variations in depth and their interactions with structures are derived. Wavemaker theories and the statistics of ocean waves are reviewed. The application of the water particle motions and pressure fields are applied to the calculation of wave forces on small and large objects. Extension of the linear theory results to several nonlinear wave properties is presented. Each chapter concludes with a set of homework problems exercising and sometimes extending the material presented in the chapter. An appendix provides a description of nine experiments which can be performed, with little additional equipment, in most wave tank facilities.

Water Wave Mechanics For Engineers And Scientists

Intended for coastal engineers and marine scientists who desire to develop a fundamental physical understanding of ocean waves and be able to apply this knowledge to ocean and coastal analysis and design. Provides an introduction to the physical processes of ocean wave mechanics, an understanding of the basic techniques for wave analysis, techniques for practical calculation and prediction of waves and applied wave forecasting.

Basic Wave Mechanics

This is a textbook aimed at graduate students and offshore engineering practitioners that covers basic fluid mechanics and the deterministic and statistical descriptions of infinitesimal and finite amplitude water waves. It reviews the theory of wave loading on structures and closes with a chapter on the potential of ocean wave energy and devices for extracting it. Since the 1980s there has been tremendous progress in numerical and physical modelling of coastal and offshore structures in waves. This calls for a clear understanding of the phenomena of wave generation, propagation, deformation and its effects on marine structures. This book will help the reader to understand the many results and descriptions found in journals, reports and research papers. It is self-contained, and encompasses the fundamentals of the subject with sufficient description and illustrations.

Ocean Wave Mechanics

This book is based on the author's experiences in engineering practice and in the classroom. The introductory topics in wave mechanics and the presentation of such have their foundations in the courses taught at the U.S. Naval Academy. The advanced topics have their origins in the postgraduate courses taught at the Johns Hopkins University.

Ocean Engineering Mechanics

This handbook is the definitive reference for the interdisciplinary field that is ocean engineering. It integrates the coverage of fundamental and applied material and encompasses a diverse spectrum of systems, concepts and operations in the maritime environment, as well as providing a comprehensive update on contemporary, leading-edge ocean technologies. Coverage includes an overview on the fundamentals of ocean science, ocean signals and instrumentation, coastal structures, developments in ocean energy technologies and ocean vehicles and automation. It aims at practitioners in a range of offshore industries and naval establishments as well as academic researchers and graduate students in ocean, coastal, offshore and marine engineering and naval architecture. The Springer Handbook of Ocean Engineering is organized in five parts: Part A: Fundamentals, Part B: Autonomous Ocean Vehicles, Subsystems and Control, Part C: Coastal Design, Part D: Offshore Technologies, Part E: Energy Conversion

Wave Mechanics for Engineers

Now in its fifth edition, *Hydraulics in Civil and Environmental Engineering* combines thorough coverage of the basic principles of civil engineering hydraulics with wide-ranging treatment of practical, real-world applications. This classic text is carefully structured into two parts to address principles before moving on to more advanced topics. The first part focuses on fundamentals, including hydrostatics, hydrodynamics, pipe and open channel flow, wave theory, physical modeling, hydrology, and sediment transport. The second part illustrates the engineering applications of these fundamental principles to pipeline system design; hydraulic structures; and river, canal, and coastal engineering—including up-to-date environmental implications. A chapter on computational hydraulics demonstrates the application of computational simulation techniques to modern design in a variety of contexts. What's New in This Edition Substantive revisions of the chapters on hydraulic machines, flood hydrology, and computational modeling New material added to the chapters on hydrostatics, principles of fluid flow, behavior of real fluids, open channel flow, pressure surge in pipelines, wave theory, sediment transport, river engineering, and coastal engineering The latest recommendations on climate change predictions, impacts, and adaptation measures Updated references *Hydraulics in Civil and Environmental Engineering, Fifth Edition* is an essential resource for students and practitioners of civil, environmental, and public health engineering and associated disciplines. It is comprehensive, fully illustrated, and contains many worked examples. Spreadsheets and useful links to other web pages are available on an accompanying website, and a solutions manual is available to lecturers.

Springer Handbook of Ocean Engineering

A Users Guide to Hydraulic Modelling and Experimentation provides a systematic, comprehensive summary of the progress made through HYDRALAB III . The book combines the expertise of many of the leading hydraulic experimentalists in Europe and identifies current best practice for carrying out state-of-the-art, modern laboratory investigations. In addition it gives an inventory and reviews recent advances in instrumentation and equipment that drive present and new developments in the subject.

The Guide concentrates on four core areas – waves, breakwaters, sediments and the relatively-new (but rapidly-developing) cross-disciplinary area of hydrodynamics/ecology. Progress made through the 'CoMIBBS' component of HYDRALAB III provides the material for a chapter focussed on guidance, principles and practice for composite modelling. There is detailed consideration of scaling and the degree of relevance of laboratory/physical modelling approaches for specific contexts included in each of the individual chapters. The Guide includes outputs from the workshops and several of the innovative transnational access projects that have been supported within HYDRALAB III, as well as the focussed joint research activities SANDS and CoMIBBS. Its primary purpose is to serve as a shared resource to disseminate the outstanding advances achieved within HYDRALAB III but, even more than this, it is a tribute to the human and institutional collaborations that led to and sustained the research advances, the human relationships that were strengthened and initiated through joint participation in the Programme, and the training opportunities that participation provided to the many young researchers engaged in the projects.

Hydraulics in Civil and Environmental Engineering

This book discusses the numerical simulation of water waves, which combines mathematical theories and modern techniques of numerical simulation to solve the problems associated with waves in coastal, ocean, and environmental engineering. Bridging the gap between practical mathematics and engineering, the book describes wave mechanics, establishment of mathematical wave models, modern numerical simulation techniques, and applications of numerical models in engineering. It also explores environmental issues related to water waves in coastal regions, such as pollutant and sediment transport, and introduces numerical wave flumes and wave basins. The material is self-contained, with numerous illustrations and tables, and most of the mathematical and engineering concepts are presented or derived in the text. The book is intended for researchers, graduate students and engineers in the fields of hydraulic, coastal, ocean and environmental engineering with a background in fluid mechanics and numerical simulation methods.

Users Guide to Physical Modelling and Experimentation

Proceedings of the NATO Advanced Research Workshop, Molde, Norway, May 22-25, 1989

Ocean Engineering Wave Mechanics

Covers coastal, harbor and offshore engineering.

Numerical Simulation of Water Waves

Written for the graduate student, this book links the theory of the hydrodynamics of waves with applications in the area. The mathematical development of this theory is explained lucidly for those coming to the subject for the first time, and plentiful exercises complete each chapter. Applications in hydraulic and offshore engineering are considered, and ample references for further reading provided.

Water Wave Kinematics

For over a hundred years, the theory of water waves has been a source of intriguing and often difficult mathematical problems. Virtually every classical mathematical technique appears somewhere within its confines. Beginning with the introduction of the appropriate equations of fluid mechanics, the opening chapters of this text consider the classical problems in linear and nonlinear water-wave theory. This sets the stage for a study of more modern aspects, problems that give rise to soliton-type equations. The book closes with an introduction to the effects of viscosity. All the mathematical developments are presented in the most straightforward manner, with worked examples and simple cases carefully explained. Exercises, further reading, and historical notes on some of the important characters in the field round off the book and make this an ideal text for a beginning graduate course on water waves.

Coastal Engineering Journal

Wide-ranging, state-of-the-art guide to coastal engineering. The first comprehensive guide to the preservation and maintenance of coastal areas in a decade, Handbook of Coastal Engineering features state-of-the-art practice and research methods. Editor John B. Herbich, one of the world's leading experts in coastal engineering and research, has brought together 23 specialists to discuss: *Coastal wave equations. The design of dikes, revetments, seawalls, breakwaters and related structures for

coastline protection, highlighting Dutch, British, and U.S. practices *Sediment transport and beach profile change, and Japanese and U.S. erosion protection methods *Maintenance of navigational channels and harbor basins *Dredging and dredged material disposal, with computer models *Removal of contaminated material by dredging *More A valuable Appendix provides authorization, funding, and implementation information for U.S. Army projects; regulatory program applicant information; a computer program; and useful reference tables.

Water Waves

Non-linear behaviour of water waves has recently drawn much attention of scientists and engineers in the fields of oceanography, applied mathematics, coastal engineering, ocean engineering, naval architecture, and others. The IUTAM Symposium on Non-linear Water Waves was organized with the aim of bringing together researchers who are actively studying non-linear water waves from various viewpoints. The papers contained in this book are related to the generation and deformation of non-linear water waves and the non-linear interaction between waves and bodies. That is, various types of non-linear water waves were analyzed on the basis of various well-known equations, experimental studies on breaking waves were presented, and numerical studies of calculating second-order non-linear wave-body interaction were proposed.

Ocean Wave Mechanics

This revised classic remains the most valuable source on principles and techniques needed by civil engineers, including scores of revisions and innovations in design, construction, materials, and equipment. Emphasis is on simplified ways to apply fundamental principles to practical problems. 725 illus.

Shore & Beach

If you need a book that relates the core principles of quantum mechanics to modern applications in engineering, physics, and nanotechnology, this is it. Students will appreciate the book's applied emphasis, which illustrates theoretical concepts with examples of nanostructured materials, optics, and semiconductor devices. The many worked examples and more than 160 homework problems help students to problem solve and to practise applications of theory. Without assuming a prior knowledge of high-level physics or classical mechanics, the text introduces Schrödinger's equation, operators, and approximation methods. Systems, including the hydrogen atom and crystalline materials, are analyzed in detail. More advanced subjects, such as density matrices, quantum optics, and quantum information, are also covered. Practical applications and algorithms for the computational analysis of simple structures make this an ideal introduction to quantum mechanics for students of engineering, physics, nanotechnology, and other disciplines. Additional resources available from www.cambridge.org/9780521897839.

Shore and Beach

Orbital Mechanics for Engineering Students, Second Edition, provides an introduction to the basic concepts of space mechanics. These include vector kinematics in three dimensions; Newton's laws of motion and gravitation; relative motion; the vector-based solution of the classical two-body problem; derivation of Kepler's equations; orbits in three dimensions; preliminary orbit determination; and orbital maneuvers. The book also covers relative motion and the two-impulse rendezvous problem; interplanetary mission design using patched conics; rigid-body dynamics used to characterize the attitude of a space vehicle; satellite attitude dynamics; and the characteristics and design of multi-stage launch vehicles. Each chapter begins with an outline of key concepts and concludes with problems that are based on the material covered. This text is written for undergraduates who are studying orbital mechanics for the first time and have completed courses in physics, dynamics, and mathematics, including differential equations and applied linear algebra. Graduate students, researchers, and experienced practitioners will also find useful review materials in the book. NEW: Reorganized and improved discussions of coordinate systems, new discussion on perturbations and quaternions NEW: Increased coverage of attitude dynamics, including new Matlab algorithms and examples in chapter 10 New examples and homework problems

A Modern Introduction to the Mathematical Theory of Water Waves

Waves in Oceanic and Coastal Waters describes the observation, analysis and prediction of wind-generated waves in the open ocean, in shelf seas, and in coastal regions with islands, channels, tidal flats and inlets, estuaries, fjords and lagoons. Most of this richly illustrated book is devoted to the physical aspects of waves. After introducing observation techniques for waves, both at sea and from space, the book defines the parameters that characterise waves. Using basic statistical and physical concepts, the author discusses the prediction of waves in oceanic and coastal waters, first in terms of generalised observations, and then in terms of the more theoretical framework of the spectral energy balance. He gives the results of established theories and also the direction in which research is developing. The book ends with a description of SWAN (Simulating Waves Nearshore), the preferred computer model of the engineering community for predicting waves in coastal waters.

Introduction to Water Waves

Engineering Fluid Mechanics guides students from theory to application, emphasizing critical thinking, problem solving, estimation, and other vital engineering skills. Clear, accessible writing puts the focus on essential concepts, while abundant illustrations, charts, diagrams, and examples illustrate complex topics and highlight the physical reality of fluid dynamics applications. Over 1,000 chapter problems provide the “deliberate practice”—with feedback—that leads to material mastery, and discussion of real-world applications provides a frame of reference that enhances student comprehension. The study of fluid mechanics pulls from chemistry, physics, statics, and calculus to describe the behavior of liquid matter; as a strong foundation in these concepts is essential across a variety of engineering fields, this text likewise pulls from civil engineering, mechanical engineering, chemical engineering, and more to provide a broadly relevant, immediately practicable knowledge base. Written by a team of educators who are also practicing engineers, this book merges effective pedagogy with professional perspective to help today’s students become tomorrow’s skillful engineers.

Proceedings, 5th National Conference on Microcomputers in Civil Engineering, November 4-6, 1987, Orlando, Florida

This textbook presents a basic course in physics to teach mechanics, mechanical properties of matter, thermal properties of matter, elementary thermodynamics, electrodynamics, electricity, magnetism, light and optics and sound. It includes simple mathematical approaches to each physical principle, and all examples and exercises are selected carefully to reinforce each chapter. In addition, answers to all exercises are included that should ultimately help solidify the concepts in the minds of the students and increase their confidence in the subject. Many boxed features are used to separate the examples from the text and to highlight some important physical outcomes and rules. The appendices are chosen in such a way that all basic simple conversion factors, basic rules and formulas, basic rules of differentiation and integration can be viewed quickly, helping student to understand the elementary mathematical steps used for solving the examples and exercises. Instructors teaching from this textbook will be able to gain online access to the solutions manual which provides step-by-step solutions to all exercises contained in the book. The solutions manual also contains many tips, coloured illustrations, and explanations on how the solutions were derived.

Handbook of Coastal Engineering

Text on coastal engineering and oceanography covering theory and applications intended to mitigate shoreline erosion.

Solutions Manual for Engineering Vibrations

This book provides an introduction to the mathematics needed to model, analyze, and design feedback systems. It is an ideal textbook for undergraduate and graduate students, and is indispensable for researchers seeking a self-contained reference on control theory. Unlike most books on the subject, Feedback Systems develops transfer functions through the exponential response of a system, and is accessible across a range of disciplines that utilize feedback in physical, biological, information, and economic systems. Karl Åström and Richard Murray use techniques from physics, computer science.

Nonlinear Water Waves

The second edition (1997) of this text was a completely rewritten version of the original text Basic Coastal Engineering published in 1978. This third edition makes several corrections, improvements and

additions to the second edition. Basic Coastal Engineering is an introductory text on wave mechanics and coastal processes along with fundamentals that underline the practice of coastal engineering. This book was written for a senior or first postgraduate course in coastal engineering. It is also suitable for self study by anyone having a basic engineering or physical science background. The level of coverage does not require a math or fluid mechanics background beyond that presented in a typical undergraduate civil or mechanical engineering curriculum. The material presented in this text is based on the author's lecture notes from a one-semester course at Virginia Polytechnic Institute, Texas A&M University, and George Washington University, and a senior elective course at Lehigh University. The text contains examples to demonstrate the various analysis techniques that are presented and each chapter (except the first and last) has a collection of problems for the reader to solve that further demonstrate and expand upon the text material. Chapter 1 briefly describes the coastal environment and introduces the relatively new field of coastal engineering. Chapter 2 describes the two-dimensional characteristics of surface waves and presents the small-amplitude wave theory to support this description.

Standard Handbook for Civil Engineers

This expanded, revised edition is a thorough and systematic treatment of linear and nonlinear partial differential equations and their varied applications. It contains updated modern examples and applications from diverse fields. Methods and properties of solutions, along with their physical significance, make the book useful for a diverse readership including graduates, researchers, and professionals in mathematics, physics and engineering.

Books in Print

"First published by Cappella Archive in 2008."

Quantum Mechanics for Scientists and Engineers

The contents of this book covers the material required in the Fluid Mechanics Graduate Core Course (MEEN-621) and in Advanced Fluid Mechanics, a Ph. D-level elective course (MEEN-622), both of which I have been teaching at Texas A&M University for the past two decades. While there are numerous undergraduate fluid mechanics texts on the market for engineering students and instructors to choose from, there are only limited texts that comprehensively address the particular needs of graduate engineering fluid mechanics courses. To complement the lecture materials, the instructors more often recommend several texts, each of which treats special topics of fluid mechanics. This circumstance and the need to have a textbook that covers the materials needed in the above courses gave the impetus to provide the graduate engineering community with a coherent textbook that comprehensively addresses their needs for an advanced fluid mechanics text. Although this text book is primarily aimed at mechanical engineering students, it is equally suitable for aerospace engineering, civil engineering, other engineering disciplines, and especially those practicing professionals who perform CFD-simulation on a routine basis and would like to know more about the underlying physics of the commercial codes they use. Furthermore, it is suitable for self study, provided that the reader has a sufficient knowledge of calculus and differential equations. In the past, because of the lack of advanced computational capability, the subject of fluid mechanics was artificially subdivided into inviscid, viscous (laminar, turbulent), incompressible, compressible, subsonic, supersonic and hypersonic flows.

Orbital Mechanics for Engineering Students

"This completely revised new edition is based on the latest version of MATLAB. New chapters cover handle graphics, graphical user interfaces (GUIs), structures and cell arrays, and importing/exporting data. The chapter on numerical methods now includes a general GUI-driver ODE solver."--Jacket.

Seychelle Collection

The Seychelle Collection Boxed Set Books #1-4 brings readers the opportunity to buy the entire Seychelle Sullivan series at one low price! Seychelle Sullivan inherited the Sullivan Towing and Salvage Company from her father, and to survive on the waterfront, she's had to become a kick-ass captain and one tough woman. When boats break down, wreck or call for help, Seychelle and her tug Gorda are on the scene. Accidents do happen, but in South Florida, when somebody dies at sea, all too often it is murder. Book #1 SURFACE TENSION On a steamy Florida morning Seychelle is answering a Mayday call launched from the five-million-dollar Broward yacht called Top Ten. Seychelle has a personal stake in this rescue: her former lover, Neal Garrett, is the yacht's hired skipper. But being the first to reach Top Ten leads to a bloody payday. A beautiful woman has been stabbed to death onboard. And Garrett is nowhere to be found. To find out what really happened to Neal Garrett, Seychelle must retrace his last steps, through two murders and a horrific crime wave, to a final confrontation with someone who may want to kill her . . . or be her salvation. Book #2 CROSS CURRENT For Seychelle Sullivan, life is all about making a living, making love, and keeping her eye on the beauty that still remains in her beloved Florida. Then her life takes a turn when her tug intercepts with a swamped fishing boat in the Gulf Stream. Inside the boat are a murdered woman and a little girl in a white dress. Seychelle returns to shore with a traumatized Haitian girl named Solange. Determined to protect Solange, and somehow

keep her from being sent back to Haiti, Seychelle becomes obsessed with the forces that nearly killed the girl. To get the answers she needs, Seychelle must return to where it all started: in the waters of the Gulf Stream, where people died for their dreams of freedom— and a man with a machete did the work of the devil himself. **Book #3 BITTER END** The third book in the Seychelle Collection is loosely based on the real South Florida murder of Greek immigrant tycoon Gus Boolis, once the owner of South Florida's Sun Cruz Casino Gambling boats. Seychelle didn't see the sniper who picked Nick Pontus off at the helm of his yacht, but she knows that there are plenty of people in South Florida who wanted to see the gambling-boat tycoon dead: the Russian mobsters looking for a piece of his casino action, the Indian gamers who resent his competition, and the ecological activists fighting his plans to develop Fort Lauderdale's waterfront. But it's Molly, Seychelle's former childhood best friend and Nick's ex-wife whom the cops zero in on. And despite her bitter feelings and against her better judgment, when her back-from-the-blue friend asks for help, Seychelle can't just weigh anchor and cruise. She's got to dive in. **Book #4 WRECKERS' KEY** In the 1800s, Key West was built by wrecking skippers who in feats of derring-do raced to shipping disasters to save valuable cargos from the ocean depths. Today, as too many boats chase too few wrecks, salvage has turned into a cutthroat corporate enterprise. And when a friend is killed, Seychelle begins to suspect a chilling scenario: that modern-day wreckers are causing yachts to crash onto the reefs—and killing off whoever gets in the way. Nestor Frias was piloting a billionaire's luxury power yacht on its maiden voyage when it ran aground. A few days later, Frias was dead. His eight-months-pregnant widow is distraught, and a host of questions surround both Frias's death and the ship's accident. When another man dies while asking questions, Seychelle navigates the dangerous shoals and channels of the case and her life, unaware that a greater danger is looming: a murderous human storm designed perfectly for her.

Sea Bitch

SEA BITCH is a collection of four short stories by the acclaimed nautical writer Christine Kling. The women and girls who sail these waters might appear somewhat innocent, but all turn deadly dangerous before these tales are done. Look out guys, if there is one theme among these pages, it is that revenge is sweet. The first story "The Night Watchman" is the original story wherein Christine created Seychelle Sullivan, the tug and salvage captain who went on to appear in her first four books, and serves as a prequel to the series. "Dead Storage" first appeared in the popular collection Miami Noir published by Akashic Books. The collection concludes with bonus excerpts from Christine's new thriller CIRCLE OF BONES and from the first in her Seychelle Sullivan series titled SURFACE TENSION. Praise for Christine Kling: "Ms. Kling is a rising queen in the suspense genre." – Midwest Book Review "[Kling] brings authority and authenticity to her novels, putting into lively focus the characteristics and personalities of the colorful people who make a living on the water." – The Miami Herald "Kling not only makes her readers curious – she sweeps them into the crosscurrent and makes them care." – Mystery Scene Magazine "Kling writes with crisp assurance, especially about life in South Florida." – Publishers Weekly "Seychelle Sullivan is a worthy successor to John D. MacDonald's fabled Travis McGee." – The (Cleveland) Plains Dealer

Surface Tension

SURFACE TENSION is the first book in this four-book suspense series featuring Florida tug and salvage captain Seychelle Sullivan. Working as she does in a man's world, Seychelle has to work twice as hard just to compete. Some have even called her reckless. In her view, she's just doing her job, salvaging boats and people's lives. On a steamy Florida morning Seychelle is answering a Mayday call launched from the five-million-dollar Broward yacht called Top Ten. Racing her fiercest competitor for salvage rights, Seychelle has a personal stake in this rescue: Her former lover, Neal Garrett, is the yacht's hired skipper. But being the first to reach Top Ten leads to a bloody payday. A beautiful woman has been stabbed to death onboard. And Garrett is nowhere to be found. While the police treat her as the prime suspect, Seychelle begins to unravel a tangled plot centered on a strip club where "all the girls are tens on top." Seychelle is connecting human predators with innocent victims, and a mystery on land with a mystery buried deep beneath the sea. Now, to find out what really happened to Neal Garrett, Seychelle must retrace his last steps, through two murders and a horrific crime wave, to a final confrontation with someone who may want to kill her . . . or be her salvation.

Mourning Tide

Mourning Tide is the first Seychelle Sullivan novel in over a decade. In this sequel to *Wreckers' Key*, Seychelle hasn't taken to motherhood as well as she hoped. Five years earlier, when Catalina Frias died in childbirth under B.J.'s care, Seychelle decided to adopt her friend's orphaned child. She promised the baby boy she would stop leading a reckless life, stop getting involved with crime, and restrict her business to towing. But now, as Nestor is about to start school, she is questioning her decision to try to raise the boy. Whatever made her think she had any parenting skills? Her adopted son calls her Seashell instead of mommy. She's refusing to marry BJ because she's convinced he will leave her eventually. And she's terrified of joining the PTA. Then, on a hot morning in June, she raises a wrecked fishing boat from the waters of a Florida swamp, only to make a horrifying discovery. She hadn't meant to get involved, but this time murder found her. The police are calling it a cold case, but when Seychelle learns the victim was Grace, the sister of her mechanic, she cannot turn her back on the sweet teenage girl who went missing months earlier. The search for answers takes Seychelle from an opulent yacht bound to do missionary work in the Caribbean, to a religious commune bordering on the Everglades, to a yacht race in the Bahamas' sunny Abaco Islands. Can she stop the killer from murdering again without endangering herself and her family along the way?

Cross Current

Cross Current For Seychelle Sullivan, life is all about making a living, making love, and keeping her eye on the beauty that still remains in her beloved Florida. Then her life takes a turn when her tug intercepts with a swamped fishing boat in the Gulf Stream. Inside the boat are a murdered woman and a little girl in a white dress. Seychelle returns to shore with a traumatized Haitian girl named Solange in her cabin. Determined to protect Solange, and somehow keep her from being sent back to Haiti, Seychelle becomes obsessed with the forces that nearly killed the girl—and left her speechless with terror. Exploring the hidden world of Florida's Haitian community, Seychelle realizes that Solange is still in great danger—and that one killer has claimed dozens of lives. With a murderer stalking the child, Seychelle is racing to unravel dangerous truths. But to get the answers she needs, she must return to where it all started: in the waters of the Gulf Stream, where people died for their dreams of freedom—and a man with a machete did the work of the devil himself.

Islands Magazine

Wreckers' Key In her Seychelle Sullivan novels, Christine Kling has brilliantly rendered the world of South Florida, as seen from the teeming waters around it. From harbors of Key West to the wilds of Biscayne Bay to the night lights of Miami, Kling's tough-minded heroine has carved out a life that is uniquely her own. Now, in *WRECKERS' KEY*, the fourth book in the series, this fiercely independent woman is at a turning point . . . and in a dangerous duel with an unseen enemy. In the 1800s, Key West was built by wrecking skippers who in feats of derring-do raced to shipping disasters to save valuable cargos from the ocean depths. Today, as too many boats chase too few wrecks, salvage has turned into a cutthroat corporate enterprise. Seychelle Sullivan, who pilots a tug her father built by hand, is unable and unwilling to compete. She is overwhelmed by issues of love, trust, motherhood, career, and family. But when a friend is killed, Seychelle begins to suspect a chilling scenario: that modern-day wreckers are causing yachts to crash onto the reefs—and killing off whoever gets in the way. Nestor Frias was piloting a billionaire's luxury power yacht on its maiden voyage when it ran aground. A few days later, Frias was dead. His eight-months-pregnant widow is distraught, and a host of questions surround both Frias's death and the ship's accident. When another man dies while asking questions, Seychelle navigates the dangerous shoals and channels of the case and her life, unaware that a greater danger is looming: a murderous human storm designed perfectly for her. With its vivid, colorful characters and rich sense of sea and land, *Wreckers' Key* is a brilliant addition to Christine Kling's fascinating, entertaining, and thrilling Florida mystery series. Praise for Christine Kling "Christine Kling's novels just keep getting better and better. . . . She takes her readers on fast-paced tours of areas into which few writers have ventured." —Carolina Garcia-Aguilera, author of *Luck of the Draw* "John D. McDonald would get a kick out of Christine Kling's suspense novels." —Chicago Tribune

Wreckers' Key

Bitter End Book #3 of Christine Kling's Seychelle Sullivan series is loosely based on the real South Florida murder of Greek immigrant tycoon Gus Boolis, once the owner of South Florida's Sun Cruz Casino Gambling boats. In Seychelle's new caper, she may just be in over her head when murder and corruption come bobbing to the surface. Since kindergarten, Seychelle and her best friend, Molly, had

been as close as sisters. Molly even dated Seychelle's brother. But it all ended suddenly when Nick Pontus, a slick, older, up-and-coming entrepreneur, came along. A smitten Molly quit school, married her new beau, and never spoke to Seychelle again. After thirteen years, it still stings. Seychelle didn't see the sniper who picked Nick off at the helm of his yacht, but she knows that there are plenty of people in South Florida who wanted to see the gambling-boat tycoon dead: the Russian mobsters looking for a piece of his casino action, the Indian gamers who resent his competition, and the ecological activists fighting his plans to develop Fort Lauderdale's waterfront. But it's Molly whom the cops zero in on. And despite her bitter feelings and against her better judgment, when her back-from-the-blue friend asks for help, Seychelle can't just weigh anchor and cruise. She's got to dive in. What she finds is a money-skimming scam aboard Nick's flagship gambling boat, Nick's new trophy wife turned merry rich widow, and Nick and Molly's teenage son, a scared kid with a big secret . . . and a killer on his trail. Protecting the boy, proving Molly's innocence, and navigating between squalls of gunfire add up to a tall order as salvage jobs go. But like any good captain, Seychelle will never abandon ship. Even if it means risking her life.

Bitter End

Maggie Riley has settled into her new life in Thailand, working aboard her sailboat and doing her best to leave the past behind. When she receives a letter from a World War II vet claiming to have served with her grandfather who went missing in action, Riley is once again pulled into the intrigue that tore her family apart and led to the disappearance of her former search partner--and the love of her life. Armed with the secret code her grandfather left behind, Riley must head to the Philippines to hunt for a mysterious shipwreck, uncover the truth of Yamashita's gold, and find the answers to old questions about her own family.

Dragon's Triangle

New York Times and USA Today Bestselling Author DIANE CAPRI Returns! For fans of Lee Child, John Grisham, and Michael Connelly "Full of thrills and tension - but smart and human too." —Lee Child , #1 World Wide Bestselling Author of Jack Reacher Thrillers Judge Willa Carson is bullet proof – except when wild justice rules from the grip of a gun. When a famous plastic surgeon's decomposed body surfaces in Tampa Bay with a bullet in its head, Federal Judge Willa Carson's "little sister" is caught in a high-stakes game of greedy lawyers, blackmail and deceit. Carly Austin knew the victim too well. Does she know too much about the killer, too? Before Willa discovers the answer, Carly disappears. Can Willa save Carly from herself and the murderous conspiracy? Or have they killed Carly, too? Free-spirited Judge Wilhelmina Carson is quick, witty and stubborn. She finds nothing is what it seems in a world where attractive women with enough money are made, not born, and beauty can cost your life. Judge Willa debuts in this fast-paced mystery filled with great characters, humor and suspense. Lee Child, action, romance, suspense, thriller, mystery, Florida, Michigan, adoption, secret baby, women sleuth, legal thriller, John Grisham, thriller series, mystery series, romantic suspense series, romantic suspense, hepatitis, medical mystery, medical thriller, psychological thriller, strong female, strong female protagonist, police procedural, thriller and suspense, vigilante justice, crime, action packed, private investigators, lawyer, police officer, FBI agents, Alaska, hard-boiled, cozy, legal, medical, suspense, suspense series, spies, tech, techno, technology, crime, financial, murder, theft, litigator, judge, juror, death, due justice, secret justice, twisted justice, wasted justice, mistaken justice, deadly dozen, deadly, gun, killer, sniper, shot, deadly, parenting, relationships, crime fiction, crime novel, kidnapping, serial killers, heist, series, women's fiction, detective, conspiracy, political, terrorism, contemporary, genre fiction, United States

Due Justice

Yoshiro thinks he might never die. A hundred years old and counting, he is one of Japan's many 'old-elderly'; men and women who remember a time before the air and the sea were poisoned, before terrible catastrophe prompted Japan to shut itself off from the rest of the world. He may live for decades yet, but he knows his beloved great-grandson - born frail and prone to sickness - might not survive to adulthood. Day after day, it takes all of Yoshiro's sagacity to keep Mumei alive. As hopes for Japan's youngest generation fade, a secretive organisation embarks on an audacious plan to find a cure - might Yoshiro's great-grandson be the key to saving the last children of Tokyo?

The Last Children of Tokyo

Former marine Maggie Riley has just set sail for the Caribbean, ready for a little R & R on her forty-foot boat before starting a work assignment in Dominica. The Cole Thatcher appears. Sexy, naked -- and possibly nuts -- Cole turns out to be an archaeologist searching for the wreckage from a World War II submarine that may hold missions in gold coins and classified documents from a powerful inner circle of the secret society Skull and Bones. Maggie has enough skeletons to deal with, but when she learns her own past may intersect the Bonesmen's, joining Cole in the hunt for the sub may be the only course to uncover a hidden truth.--Cover.

Circle of Bones

"For such a sun-stoked place, Miami sure is shady . . . this batch of dirty deep South Florida fiction might just send you packing . . . your own heat." —SunPost Don't let the fabulous weather, the beach bodies, and the high-end boutiques fool you. There is a darkness to Miami that can hit just as hard as a hurricane. If by day, the streets are lined with tourists, at night the gangsters, drug dealers, and desperate come out to play. It's this Miami that has captured the imagination of some of the city's best writers. Miami Noir includes stories by James W. Hall, Barbara Parker, John Dufresne, Paul Levine, Carolina Garcia-Aguilera, Tom Corcoran, Christine Kling, George Tucker, Kevin Allen, Anthony Dale Gagliano, David Beaty, Vicki Hendricks, John Bond, Preston Allen, Lynne Barrett, and Jeffrey Wehr. "For different reasons these stories cultivate a little something special, a radiance, a humanity, even a grace, In the midst of the noir gloom, and thereby set themselves apart. Variety, familiarity, mood and tone, and the occasional gem of a story make Miami Noir a collection to savor." —The Miami Herald "Murder is nothing new in Miami—or any other big city, for that matter. But seldom has it been so entertaining as it is in the 16 short stories included in Miami Noir." —Palm Beach Daily News "This well-chosen short story collection isn't just a thoughtful compilation of work by some of South Florida's best and upcoming writers. Each Miami Noir story also is a window on a different part of Miami-Dade and its melting pot of cultures." —South Florida Sun-Sentinel

The Publishers Weekly

Ernest Solvay, philanthropist and organizer of the world-famous Solvay conferences on physics, discovered a profitable way of making soda ash in 1861. Together with a handful of associates, he laid the foundations of the Solvay company, which successfully branched out into other chemicals, plastics and pharmaceuticals. Since its emergence in 1863, Solvay has maintained world leadership in the production of soda ash. This is the first scholarly book on the history of the Solvay company, which was one of the earliest chemical multinationals and today is among the world's twenty largest chemical companies. It is also one of the largest companies in the field to preserve its family character. The authors analyze the company's 150-year history (1863–2013) from economic, political and social perspectives, showing the enormous impact geopolitical events had on the company and the recent consequences of global competition.

Miami Noir

This new kind of dictionary reflects the use of "rhythm rhymes" by rappers, poets, and songwriters of today. Users can look up words to find collections of words that have the same rhythm as the original and are useable in ways that are familiar to us in everything from vers libre poetry to the lyrics and music of Bob Dylan and hip hop groups.

Solvay

Known as the bald cowboy in *The Magnificent Seven* and the sexy, charismatic male lead in *The King and I*, Yul Brynner was a Hollywood paragon of masculinity. Beyond his distinctive appearance and distinguished acting career was a life of intrigue and concocted tales surrounding his youth. Born Yul Brynner in Russia, he played gypsy guitar and worked as a trapeze clown until a severe injury motivated him to pursue his interest in theater. This biography takes readers through Brynner's formative years in Russia, France and China and describes his journey from sweeping stages in Parisian theaters to a versatile career in theater, television and film, reaching a stardom that began and ended with the classic Rodgers and Hammerstein musical *The King and I*. With accounts of his personal and professional successes and failures, the book includes his four marriages, his numerous and notorious affairs with such stars as Judy Garland, Joan Crawford and Ingrid Bergman, and his 1985 death from lung cancer. A filmography details his movies and plays, and appendices outline his work in documentaries, music and soundtracks, radio programs and television.

The Word Rhythm Dictionary

A Handbook of Environmental Management presents a range of case studies that demonstrate the complementary application of different social science techniques in combination with ecology-based management thinking to the natural environment. Contemporary environmental management is characterised by an increasing awareness of the need for interdisciplinary approaches. This requires managers to effectively combine insights from both the natural and social sciences in order to ensure sustainable outcomes. This eloquent and unique Handbook provides a broad overview, complimented by specific case studies and techniques that are used in environmental management from the local level to international environmental regimes. With contributions from leading authorities in the field, this innovative volume provides a valuable teaching aid for students, as well as an insightful and practical reference tool for environmental practitioners with no background in the social sciences. Environmental managers and policymakers attempting to learn about, and integrate thinking from, the social sciences should also not be without this important resource. Contributors: B. Adhikari, J. Barnard, T.M. Brooks, N. Burgess, D. El-Demellawy, G.A.B. da Fonseca, S. Frantzi, F.R. Gell, J. Gerlach, M. Hoffmann, D. Kirby, J.F. Lamoreux, T. Lehmborg, J.C. Lovett, S. Mahagama, G.A. Mill, C.G. Yul Brynner

In 1732 a Shaman performed 'The Curse of the Damned' on two women, trapped their tormented souls in wax dolls, and banished them to a tiny island. Fast forward 287 years. Rosie Moorea is a simple girl who lives an unassuming life. Her friends convince her that she needs to give herself a fun adventure. Overcoming long standing anxieties, she books a solo vacation. All is uneventful until she meets the charismatic, professional skateboarding movie star, Devin Fitzroy, who convinces her to go on a picnic. With a setting sun and an approaching storm, they end up on an island rumored to be haunted by cursed dolls. Rosie and Devin don't believe the superstitions that the dolls come alive when the sun goes down. However, they're about to discover there's more to worry about than bugs and snakes when they find themselves stranded on an island that holds many secrets, most of them evil. Forced to confront their own fears and insecurities, the women are thrown into situations that require quick wit and bravery to survive. Will they make it through the night to see the sun rise or will something more evil than they could ever have imagined get to them first? *The Curse of Doll Island* will take you on a harrowing adventure you may want to, but might never, forget.

A Handbook of Environmental Management

Shipwreck hunters Maggie Riley and Cole Thatcher are no strangers to the mysteries hidden beneath the seas. They've uncovered artifacts with secrets that powerful interests would do anything to control--and they're about to do it again. As the newly engaged couple prepares to set sail, Cole suspects they are being followed. While he tries to unravel a coded message that hints at a treasure jealously guarded by an ancient society, a bomb is discovered on the couple's yacht. Now it appears that Cole's belief isn't mere paranoia--and that the cipher holds information others will kill for. From a sunken submarine off the coast of Tunisia to the hallowed halls of the Vatican, can Riley and Cole outrun a ghost and save a manuscript that could rock the foundations of history?

The Curse of Doll Island

School refusal affects up to 5% of children and is a complex and stressful issue for the child, their family and school. The more time a child is away from school, the more difficult it is for the child to resume normal school life. If school refusal becomes an ongoing issue it can negatively impact the child's social and educational development. Psychologist Joanne Garfi spends most of her working life assisting parents, teachers, school counsellors, caseworkers, and community policing officers on how best to deal with school refusal. Now her experiences and expertise are available in this easy-to-read practical book. *Overcoming School Refusal* helps readers understand this complex issue by explaining exactly what school refusal is and provides them with a range of strategies they can use to assist children in returning to school. Areas covered include: • types of school refusers • why children refuse to go to school • symptoms • short term and long term consequences • accurate assessment • treatment options • what parents can do • what schools can do • dealing with anxious high achievers • how to help children on the autism spectrum with school refusal

Overcoming School Refusal

From a young Palestinian writer comes this compelling look at the Israel/Palestine conflict, from both the perspective of an Israeli soldier in 1949 as well as that of a young Palestinian woman.

Master Dyers to the World

INSTANT NEW YORK TIMES BESTSELLER Featured on Today What to Read in 2021 by The Washington Post A Wall Street Journal monthly pick The international bestselling author of the “exciting, suspenseful, inspirational” (Brad Thor, #1 New York Times bestselling author) *Code Name: Lise* weaves another exceptional and thrilling hidden history of an ordinary American girl who became one of the OSS’s most daring spies in World War II before marrying into European nobility. Perfect for fans of *A Woman of No Importance* and *Code Girls*. When Aline Griffith was born in a quiet suburban New York hamlet, no one had any idea that she would go on to live “a life of glamour and danger that Ingrid Bergman only played at in *Notorious*” (Time). As the US enters the Second World War, the young college graduate is desperate to aid in the war effort, but no one is interested in a bright-eyed young woman whose only career experience is modeling clothes. Aline’s life changes when, at a dinner party, she meets a man named Frank Ryan and reveals how desperately she wants to do her part for her country. Within a few weeks, he helps her join the Office of Strategic Services—forerunner of the CIA. With a code name and expert training under her belt, she is sent to Spain to be a coder, but is soon given the additional assignment of infiltrating the upper echelons of society, mingling with high-ranking officials, diplomats, and titled Europeans, any of whom could be an enemy agent. Against this glamorous backdrop of galas and dinner parties, she recruits sub-agents and engages in deep-cover espionage to counter Nazi tactics in Madrid. Even after marrying the Count of Romanones, one of the wealthiest men in Spain, Aline secretly continues her covert activities, being given special assignments when abroad that would benefit from her impeccable pedigree and social connections. Filled with twists, romance, and plenty of white-knuckled adventures fit for a James Bond film, *The Princess Spy* brings to vivid life the dazzling adventures of a remarkable American woman who risked everything to serve her country.

Nature and History in Modern Italy

Receiving a text from Sasha, my girlfriend, at work was always risky. Especially when she wanted to know if her girlfriend was horny. A short and sweet (and filthy) story.

Defying Extinction

A moving lyric meditation on the Congo River that explores the identity, chaos, and wonder of the Democratic Republic of Congo as well as race and the detritus of colonialism. With *The River in the Belly*, award-winning Congolese author Fiston Mwanza Mujila seeks no less than to reinstate the Congo River in the imaginary of European languages. Through his invention of the “solitude”—a short poetic form lending itself to searing observation and troubled humor, prone to unexpected tonal

shifts and lyrical u-turns—the collection celebrates, caresses, and chastises Central Africa's great river, the world's second largest by discharge volume. Drawing inspiration from sources as diverse as Soviet history, Congolese popular music, international jazz, and everyday life in European exile, Mwanza Mujila has fashioned a work that can speak to the extraordinary hopes and tragedies of post-independence Democratic Republic of the Congo while also mining the generative yet embattled subject position of the African diasporic writer in Europe longing for home. Fans of *Tram 83* will discover in *River* the same incandescent, improvisatory verbal energy that so dazzled them in Mwanza Mujila's English-language debut.

Minor Detail

"This comprehensive survey of the biology of birds emphasizes the evolutionary aspects that have given birds their dominant place in nature as an active, visually oriented, species-rich group; it relates birds to their environment, their ancestors, and to each other." --Dust jacket.

The Cornell Alumni News

England's controversial #1 best-seller. What brings a child to kill another child? In 1968, at age eleven, Mary Bell was tried and convicted of murdering two small boys in Newcastle upon Tyne, England. Gitta Sereny, who covered the sensational trial, never believed the characterization of Bell as the incarnation of evil, the bad seed personified. If we are ever to understand the pressures that lead children to commit serious crimes, Sereny felt, only those children, as adults, can enlighten us. Twenty-seven years after her conviction, Mary Bell agreed to talk to Sereny about her harrowing childhood, her terrible acts, her public trial, and her years of imprisonment—to talk about what was done to her and what she did, who she was and who she became. Nothing Bell says is intended as an excuse for her crimes. But her devastating story forces us to ponder society's responsibility for children at the breaking point, whether in Newcastle, Arkansas, or Oregon. A masterpiece of wisdom and sympathy, Gitta Sereny's wrenching portrait of a girl's damaged childhood and a woman's fight for moral regeneration urgently calls on us to hear the cries of all children at risk.

The Princess Spy

The author undercuts the bombast of current publicity surrounding school failure and reform, exposing some of the educational delusions Americans tolerate and suggesting more honest approaches to formal education.

Skin in the Game

A warm, gorgeous exploration of a little girl's experience immigrating to a new country and missing her home and her grandmother, who still lives far away. Sakura's dad gets a new job in America, so she and her parents make the move from their home in Japan. When she arrives in the States, most of all she misses her grandmother and the cherry blossom trees, under which she and her grandmother used to play and picnic. She wonders how she'll ever feel at home in this new place, with its unfamiliar language and landscape. One day, she meets her neighbor, a boy named Luke, and begins to feel a little more settled. When her grandmother becomes ill, though, her family takes a trip back to Japan. Sakura is sad when she returns to the States and once again reflects on all she misses. Luke does his best to cheer her up -- and tells her about a surprise he knows she'll love, but she'll have to wait till spring. In the meantime, Sakura and Luke's friendship blooms and finally, when spring comes, Luke takes her to see the cherry blossom trees flowering right there in her new neighborhood. Sakura's *Cherry Blossoms* captures the beauty of the healing power of friendship through Weston's Japanese poetry-inspired text and Saburi's breathtaking illustrations.

Sissy Dreams: From Boyfriend to Girlfriend

"Staff from smaller airports typically lack specialized expertise in the negotiation and development of airport property or the resources to hire consultants. ACRP Research Report 213 provides airport management, policymakers, and staff a resource for developing and leasing airport land and improvements, methodologies for determining market value and appropriate rents, and best practices for negotiating and re-evaluating current lease agreements. There are many factors that can go into the analysis, and this report reviews best practices in property development."--Foreword.

The River in the Belly

In contemporary philosophy, substantive moral theories are typically classified as either consequentialist or deontological. Standard consequentialist theories insist, roughly, that agents must always act so as to produce the best available outcomes overall. Standard deontological theories, by contrast, maintain that there are some circumstances where one is permitted but not required to produce the best overall results, and still other circumstances in which one is positively forbidden to do so. Classical utilitarianism is the most familiar consequentialist view, but it is widely regarded as an inadequate account of morality. Although Professor Scheffler agrees with this assessment, he also believes that consequentialism seems initially plausible, and that there is a persistent air of paradox surrounding typical deontological views. In this book, therefore, he undertakes to reconsider the rejection of consequentialism. He argues that it is possible to provide a rationale for the view that agents need not always produce the best possible overall outcomes, and this motivates one departure from consequentialism; but he shows that it is surprisingly difficult to provide a satisfactory rationale for the view that there are times when agents must not produce the best possible overall outcomes. He goes on to argue for a hitherto neglected type of moral conception, according to which agents are always permitted, but not always required, to produce the best outcomes.
