At.the film switches gears to show the **Seabees**, ...

At.the film switches to the South Pole where the CBs maintain the USA's most distant base in Antarctica as part of Operation Deep Freeze. A C-130 Hercules is shown delivering a Swiss-built snow machine, used to create a new Little America. At McMurdo Sound, a nuclear reactor prepared in Rhode Island is shown being installed at the Antarctic, to provide power for McMurdo. (This was known as the PM-3A (Portable, Medium-power, 3rd generation). It was one of the first shore-based power plants to use solid-state equipment. The plant was air-cooled with the condensers and fan units running glycol. Waste heat was also used for desalination using vacuum flash distillation. The reactor went critical in March of 1962 and supplied useful electricity to McMurdo in July of 1962. With a total of 438 malfunctions during its operational lifetime from 1964 to 1972, when it was decommissioned, the reactor at McMurdo proved to be an unreliable source of power generation, available only 72% of the time.)
