Issues in Informing Science & Information Technology, Volume 9 (2012)

Within little more than ten years in the early nineteenth century, inhabitants of Tahiti, Hawaii and fifteen other closely related societies destroyed or desecrated all of their temples and most of their god-images. In the aftermath of the explosive event, which Sissons terms the Polynesian Iconoclasm, hundreds of architecturally innovative churches — one the size of two football fields — were constructed. At the same time, Christian leaders introduced oppressive laws and courts, which the youth resisted through seasonal displays of revelry and tattooing. Seeking an answer to why this event occurred in the way that it did, this book introduces and demonstrates an alternative "practice history" that draws on the work of Marshall Sahlins and employs Bourdieu's concepts of habitus, improvisation and practical logic.

Social and Political Implications of Data Mining: Knowledge Management in E-Government

Power and Politeness in the Workplace has become established as a seminal text for courses in language and professional communication. Co-authored by bestselling author Janet Holmes, this text provides insights into the way we all talk at work, including a wealth of material illustrating the way people communicate with each other in their ordinary everyday encounters in their workplaces. The analysis focuses, in particular, on how and why people "do" power and politeness in the workplace, and examines the discourse strategies involved in balancing the competing demands of meeting workplace objectives and getting things done on time with maintaining good collegial workplace relationships. Drawing on a large and very varied corpus of data collected in a wide range of workplaces, the authors explore specific types of workplace talk, such as giving advice and instructions, solving problems, running meetings and making decisions. Attention is also paid to the important contribution of less obviously relevant types of workplace talk such as humour and small talk, to the construction of effective workplace relationships. In the final chapter some of the practical implications of the analyses are identified. This Routledge Linguistics Classic is here reissued with a new preface from the authors, covering the methods of analysis, an update on the Language in the Workplace project and a look at the work in the context of recent research. *Power and Politeness in the Workplace* continues to be a vital read for researchers and postgraduate students in the fields of applied linguistics and communication studies.

Given its geographical proximity to Asia and its close alliance with the West, Australia, amid the rise of Asian economies, needs to re-formulate its policies on trade, investment and security. Over the years, in making decisions on issues relating to trade, investment and security, the Australian government has often resorted to the notion of 'national interest'. This book attempts to analyse 'national interest' from the perspectives of economics, finance, international trade, foreign direct investment, international relations, energy resources, and migration in the context of Australia in the Asian century. Currently, there are no multidisciplinary books on the Australian 'national interest'. This book fills the gap with a broad and integrated approach in examining the subject. Academics, researchers, and students of various disciplines (such as economics, finance, international relations, international trade, foreign direct investment and Asian studies), policy advisors, government agencies, financial institutions, and trade law practitioners from around the world will find this book useful and stimulating.

This book aims to appraise sociolinguistic work devoted to the form and function of storytelling and to examine in detail the ways in which narrative constitutes a fundamental discursive resource across a range of contexts. The chapters presented here bring together some of the most recent work in the theory and practice of narrative analysis from a broad sociolinguistic perspective. They address some of the questions left implicit whenever stories are brought within the analytic frame of sociolinguistics: What exactly do we mean by 'story'?; what kind of social and contextual variations can determine the production and shape of situated stories, and what are the core elements of narrative as a discursive unit and interactional resource?; how is the relationship between narrative discourse and social context articulated in the construction of cultural identities? The data come both from institutional settings such as workplaces, courtrooms, schools, and the media, as well as from informal everyday settings.

How to Kill the Scrum Monster

The long history of China's relationship between stability, diversity, and prosperity, and how its current leadership threatens this delicate balance Chinese society has been shaped by the interplay of the EAST—exams, autocracy, stability, and technology—from ancient times through the present. Beginning with the Sui dynasty's introduction of the civil service exam, known as Keju, in 587 CE—and continuing through the personnel management system used by the Chinese Communist Party (CCP)—Chinese autocracies have developed exceptional tools for homogenizing ideas, norms, and practices. But this uniformity came with a huge downside: stifled creativity. Yasheng Huang shows how China transitioned from dynamism to extreme stagnation after the Keju was instituted. China's most prosperous periods, such as during the Tang dynasty (618–907) and under the reformist CCP, occurred when its emphasis on scale (the size of bureaucracy) was balanced with scope (diversity of ideas). Considering China's remarkable success over the past half-century, Huang sees signs of danger in the political and economic reversals under Xi Jinping. The CCP has again vaulted conformity above new ideas, reverting to the Keju model that eventually led to technological decline. It is a lesson from China's own history, Huang argues, that Chinese leaders would be wise to take seriously.

Managing IT Professionals in the Internet Age

Masters Theses in the Pure and Applied Sciences was first conceived, published, and disseminated by the Center for Information and Numerical Data Analysis and Synthesis (CINDAS)* at Purdue University in 1957, starting its coverage of theses with the academic year 1955. Beginning with Volume 13, the printing and dissemination phases of the activity were transferred to University Microfilms/Xerox of Ann Arbor, Michigan, with the thought that such an arrangement would be more beneficial to the academic and general scientific and technical community. After five years of this joint undertaking we had concluded that it was in the interest of all concerned if the printing and distribution of the volumes were handled by an international publishing house to assure improved service and broader dissemination. Hence, starting with Volume 18, Masters Theses in the Pure and Applied Sciences has been disseminated on a worldwide basis by Plenum Publishing Corporation of New York, and in the same year the coverage was broadened to include Canadian universities. All back issues can also be ordered from Plenum. We have reported in Volume 39 (thesis year 1994) a total of 13,953 thesis titles from 21 Canadian and 159 United States universities. We are sure that this broader base for these titles reported will greatly enhance the value of this important annual reference work. While Volume 39 reports theses submitted in 1994, on occasion, certain universities do report theses submitted in previous years but not reported at the time.

Assessment really does matter in higher education. Internationally, academics - and those who support them - are seeking better ways to assess students, recognizing that diverse methods are available which may solve many of the problems associated with the evaluation of learning. Assessment Matters in Higher Education provides both theoretical perspectives and pragmatic advice on how to conduct effective assessment. It draws clearly on both relevant research and on its contributors' practical first hand experience (warts and all!). It asks, for example: * how can assessment methods best become an integral part of learning? * what strategies can be used to make assessment fairer, more consistent and more efficient? * how effective are innovative approaches to assessment, and in what contexts do they prosper? * to what extent can students become involved in their own assessment? * how can we best assess learning in professional practice contexts? This is an important resource for all academics and academic managers involved in assessing their students.

Found in Translation is a rich account of language and shifting cross-cultural relations on a Christian mission in northern Australia during the mid-twentieth century. It explores how translation shaped

interactions between missionaries and the Anindilyakwa-speaking people of the Groote Eylandt archipelago and how each group used language to influence, evade, or engage with the other in a series of selective “mistranslations.” In particular, this work traces the Angurugu mission from its establishment by the Church Missionary Society in 1943, through Australia’s era of assimilation policy in the 1950s and 1960s, to the introduction of a self-determination policy and bilingual education in 1973. While translation has typically been an instrument of colonization, this book shows that the ambiguities it creates have given Indigenous people opportunities to reinterpret colonization’s position in their lives. Laura Rademaker combines oral history interviews with careful archival research and innovative interdisciplinary findings to present a fresh, cross-cultural perspective on Angurugu mission life. Exploring spoken language and sound, the translation of Christian scripture and songs, the imposition of English literacy, and Aboriginal singing traditions, she reveals the complexities of the encounters between the missionaries and Aboriginal people in a subtle and sophisticated analysis. Rademaker uses language as a lens, delving into issues of identity and the competition to name, own, and control. In its efforts to shape the Anindilyakwa people’s beliefs, the Church Missionary Society utilized language both by teaching English and by translating Biblical texts into the native tongue. Yet missionaries relied heavily on Anindilyakwa interpreters, whose varied translation styles and choices resulted in an unforeseen Indigenous impact on how the mission’s messages were received. From Groote Eylandt and the peculiarities of the Australian settler-colonial context, *Found in Translation* broadens its scope to cast light on themes common throughout Pacific mission history such as assimilation policies, cultural exchanges, and the phenomenon of colonization itself. This book will appeal to Indigenous studies scholars across the Pacific as well as scholars of Australian history, religion, linguistics, anthropology, and missiology.

Ending poverty and stabilizing climate change will be two unprecedented global achievements and two major steps toward sustainable development. But the two objectives cannot be considered in isolation: they need to be jointly tackled through an integrated strategy. This report brings together those two objectives and explores how they can more easily be achieved if considered together. It examines the potential impact of climate change and climate policies on poverty reduction. It also provides guidance on how to create a “win-win” situation so that climate change policies contribute to poverty reduction and poverty-reduction policies contribute to climate change mitigation and resilience building. The key finding of the report is that climate change represents a significant obstacle to the sustained eradication of poverty, but future impacts on poverty are determined by policy choices: rapid, inclusive, and climate-informed development can prevent most short-term impacts whereas immediate pro-poor, emissions-reduction policies can drastically limit long-term ones.

When marketing managers and financial managers join forces within any business, the result can often be poor communication on financial criteria and goals. The risk of this situation occurring is inevitably present when those with different professional backgrounds and roles are working in accordance with

their own norms. In his seminal 1956 paper on general systems theory, the economist Kenneth Boulding referred to the phenomenon of "specialised ears and generalised deafness"

This book takes a fresh look at programs for advanced studies for high school students in the United States, with a particular focus on the Advanced Placement and the International Baccalaureate programs, and asks how advanced studies can be significantly improved in general. It also examines two of the core issues surrounding these programs: they can have a profound impact on other components of the education system and participation in the programs has become key to admission at selective institutions of higher education. By looking at what could enhance the quality of high school advanced study programs as well as what precedes and comes after these programs, this report provides teachers, parents, curriculum developers, administrators, college science and mathematics faculty, and the educational research community with a detailed assessment that can be used to guide change within advanced study programs.
